effective, whereas a reply to the newsgroup just wastes bandwidth and
an email attack will just get the sender in trouble.

>TUSH or the individual who placed the ad? I think NOT.

Don't be so quick to make legal statements, Les. A disclaimer has
to accompany the ad saying something to the effect ``Not legal to
sell or possess in the following states: ...'' Have you checked
which states prohibit sales of your pepper spray? No? Oops...

>73 is a "numbered radiogram". It is a shortcut used when passing message
>traffic to abbreviate certain stereotypical phrases. For example,
>73 = best regards,
>88 = love & kisses,
>61 = merry Christmas (if memory serves me)
>Look in the back of any ARRL logbook for a complete listing. I would guess
>there are 40 or 50 numbered radiograms there.

>Paul Morawski, AA3DD
>morawski@ai.mitre.org

Paul is, of course, correct, but as a side note, many people say "73's"
which is incorrect. The translation of "73's" would be "best regards's",
which sounds dumber than "What's your handle?".

Not many people care, but just an item of note.

1101. Re: 2-meter HAM vs. Cellular

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-29 00:10:01 UTC
From: jeffrey@math.hawaii.edu
Message-ID: <D354Gp.GBz@news.hawaii.edu>
Source record: 253026
Cross-posted to: misc.survivalism,rec.radio.amateur.misc,rec.radio.scanner,alt.2600

Why are you cross posting this to so many groups, Glenn?
I've taken Dana's suggestion and directed this to rec.radio.policy.

critter@wizvax.wizvax.com (Glenn C. Lasher Jr.) writes:

>Jeffrey Herman <jeffrey@math.hawaii.edu> wrote with respect to
>the Part 97 wording ``...when normal communication systems are
>not available.'':

>>So before you use your HT out-of-band to call for help you'd better
>>make sure none of the following are nearby: pay phone, cellular phone,
>>CB radio, amateur repeater, amateurs monitoring a simplex frequency,
>>someone within shouting distance who could summon further help,
>>signalling mirror to signal an overhead airplane. Otherwise, no
>>fair grumbling if your HT gets taken away and you receive a NAL.

>1: If you read the original post, you would have known that there were
>no ham repeaters in reach.

Do you mean the original post from two years ago? Yes I read it and
I recall there was an FCC official present when the ham was given
the option of donating his radio or face charges. But that event
is on a distant vertex to the present discussion. Currently we're
analysing Part 97 regarding the issue overall. The `>>' quoted
above is my interpretation of what ``...normal communication
systems are not available'' means. I'm just trying to prevent
someone from having to go to court to justify their out-of-
band transmission.

>2: If you had read the original post, you would have known that the HT
>was confiscated by the sherriff's office, which has no legal authority
>to do so.

See the above. Also note that an FCC official was present, and that
there is only one r in sheriff.

>3: Do you know for a fact that this ham was carrying a cell phone? If
>he was not (I don't know if he was either) then the cell site would be a
>moot point, since HT's dont work with cell sites.

We're discussing this in the abstract, not with respect to a particular
event. Did you just start reading this? Which newsgroup are you on?
Come join us over on rec.radio.amateur.misc, for you must be on one
of the cross-posted groups that just picked up this topic.

>4: There is a good chance that even if the ham was carry a cell phone,
>it would have been as useless as the ham band, if not more so. The
>sherriff's office had arranged full coverage of the are by their repeater
>out of necessity. Both ham repeaters and cell phones are luxury items,
>so maybe not as much effort was made to get the coverage. Cell sites are
>purposely short-ranged anyway.

Again, we're not discussing a particular event. It sounds to me that
you're trying to justify transmitting out-of-band; remember, first
check to see that ``...normal communication systems are not
available.''

>I await your reply.

If you had carefully read what I wrote in the context of the discussion
you wouldn't have to waste your weekend awaiting my reply!

> >
> > Regards.

> Congratulations. You've just indicated that you will partake in willfull
> and malicious interferance. Any other helpful bits you'd like to contribute
> to the hobby?

Hi Jeff: What were you thinking when you wrote this? We all use
beacons to check propagation conditions, or for navigation. Nothing
illegal about that.

Also, use care with regard to the h-word. Some folks on here don't
consider our hobby to be a hobby - they'll say that word doesn't appear
anywhere in Part 97 (neither does `ham'), yet I always hear private pilots
refering to flying as a `sport'; the FAA regs don't mention the word
`sport'.

>"1935 will go down in history. For the first time, a civilized nation has
>full gun registration. Our streets will be safer, our police more efficient,
>and the world will follow our lead into the future." - Adolf Hitler

That quote is from a different time, in a different context, with
different people on the streets than today. Hitler also believed
in dental hygiene - does that mean brushing one's teeth is to be
avoided so as not to appear to be in like mind with him?

HY>My plan is to thread them into the back of the rigs and leave them there.
>No more wear and tear on the female threads. Then, I can slip my ground
>straps

I don't understand why, if the rigs are used EXCLUSIVELY mobile, you
would need to cycle the ground screw threads more than once... to
perform the initial installation.

If you install/remove the rigs every time you leave the vehicle
unattended, then why don't you get some mating, single-conductor
plugs and attach a short length of wire to one and permanently attach it
to the rig with the other connector permanently attached to the rest of
the groung strap. Then, just plug/unplug as required.

Obviously, this won't answer your original question... sorry.

>batteries can have, if they are not allowed to drain empty before
>recharging.

How 'new' is the battery pack? And how many times has it been charged?
Usually memory effect only develops after extended use... that's why
it's called memory.

It might be that you are not providing charge time adequate enough to
fully charge the battery pack in the first place. Especially if it's an
extended run battery pack (e.g. 1500mA instead of the normal 700Ma
pack). Extended run packs require substantially longer to charge...
generally 2 to 2.5 times longer, depending upon the current rating.

I know how you feel!! The only drawback of dual band antennas, is that whatever
is gained on one band is lost on the other. That is why you have to comprimise
and try to adjust accordingly. I still stick with monoband antennas and place a
duplexer along the feedline if you have a dual band radio. The price had no
unaffordable bearing. Make sure though you have an SWR meter that can handle
both of your frequency ranges.

Jeff,
It would be much more accurate to say it's ONE mode requiring some level of mental skill. For a QSO to be interesting, any mode requires mental skill. I'd bet RTTY operators would insist their mode requires a certain level of skill, as would satellite operators and microwave folks.

Actually, CW requires quite a low level of skill. After all, we're always told even young kids can learn it.

1119. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-29 07:15:04 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.TN0NZc1w165w@GRAFex.sbay.org>
Source record: 253018
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE525.EXE. Compile on your

system then uudecode UUEXE525.EXE. This is a self-extracting archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

1. Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know.

2. You have spelled the file name incorrectly.

3. The file name has changed since the INDEX was generated. Order a new INDEX.

4. You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

Try the PING command to check that the path is open.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to incoming@grafex.sbay.org. This email address is set up to flag me that there is something new that I need to take care of quickly.

Hi;
I recieved this lovely little note from Pete deVolpi at amsoft. You read it and decide if this looks like a noncommercial entity publishing a noncommercial newsletter, or a business advertising on the 'net. Pete says it clearly--he thinks I'm attempting to restrain amsoft from doing trade!! Would he think or say something like that if he *WASN'T* doing trade???! You decide. I guess all further criticism of these guys best be done thru the offshore anon servers.... Imagine a thousand corporations just like this one, puking terabytes of commercial ads into the net. It'd be tough just to find the real traffic through the junk mail.

[recieved from amsoft@epix.net]

>fecal matter. I wish the same on the hoseheads at AMSOFT.

BOB, your suggestion that persons should be asked to CRASH our MAILER
WITH ELECTRONIC FECAL MATTER will be met with a strong challenge here!

I would like to introduce you to my friend, K3RF. Robert Famiglio, Esq.
With the firm of Famiglio & Massinger, in Media, PA. Robert used to be
counsel to the ARRL and has 27 years of law practice. He has been our
company attorney for the last 3 years. And has represented AmSoft on both
copyright and cival litigation. I would hope that you have good sense and
can conduct yourself as a gentleman on the Internet. I hope this does not
require any further intervention.

I suggest you heed the warning I have given you and cease any further
harassment of employees of AmSoft and amsoft@epix.net.

Send E-mail to: amsoft@epix.net ,(Pete deVolpi, KC3TL)
Publisher of "The World of Ham Radio" Callsign CD-ROM
01/28/95 AD, 15:40:14 EST, Hams do it with frequency!

Well, depending on your license class you may be allowed to grovel or kowtow. The regulations change every few years -- for example, prostrating was required until 1991.

Yep!

Most cars that I know of have the engine/transmission assembly mounted
via rubber mounts. Therefore if the engine to frame ground strap is not
present, or represents a relativly high resistance to the flow of the
high current of the starter, or even the more moderate current output
that the alternator is capable of, the wiring to your X hundred dollar
radio, or the throttle or clutch cable may all of a sudden be the best
connection between the engine and the vehicle frame.

As Gary mentioned, usually the negative power connection in the radio
goes to a PC board trace, and only from there will it find its way to
the coax connector or chassis ground. I know this is true in the
commercial two-way radios I perform production alignment and test on.

If neither the radio or antenna are grounded, you're probably safe.
Personally, when possible I like a nice, secure, low resistance
connection from the antenna to its surrounding ground plane.
For some reason it yeilds above-average antenna performance.

The fuse in the negative lead is very cheap insurance against a mishap
that burns up >my< radio.

73, and hope your radio lasts through the next vehicular electrical mishap.

On 25 Jan 1995 23:24:48 GMT Jim Devenport (jdevenport@lanl.gov) wrote in rec.radio.amateur.misc:
: I have tried unsuccessfully, repeatedly, to get BAYCOM 1.5 to run from
: a Windows icon. The serial port interrupts seem to be the problem. It
...
: Is there a way to make it work under Windows?

Baycom uses some low level features of the computer very hard, in order to decode synchronous serial data that the PC hardware wasn't built to handle. Normal asynchronous serial I/O operations are handled by hardware that has to be attended to by the CPU at most once for every byte, usually less often because several bytes can be buffered and read at once with newer hardware. An asynchronous byte has a length of ten bits, including the start and stop bits. With Baycom the CPU has to attend to every bit, and is working at least ten times as hard to handle the I/O. I say "at least" because in addition to the buffering of multiple bytes there are other kinds of bookkeeping and synchronization that are handled by the hardware for normal asnychronous I/O that make additional work for the CPU under Baycom.

Windows is a multitasking system built as a set of extensions to DOS, which is not a multitasking system. The basic premise of most multitasking systems is that the CPU can do nothing to further the execution of a single process while hardware is completing an I/O operation. Thus when a particular process is waiting for I/O it can be suspended and another process can use the CPU without really slowing down either process. This can be managed by giving the operating system, rather than individual processes, total control of the I/O hardware and the software that handles this hardware at the lowest level. Multitasking systems also must have ways to take the CPU away from a particular process when it isn't waiting for I/O if it is delaying other processes.

Because of the way Baycom does its I/O it can't allow Windows to manage it. Baycom does not use the serial port as a serial port in any sense that makes Windows management of that use possible. The data is not sent or received on the serial data out/in lines, it is sent and received using lines that are normally used for handshaking with an external terminal or modem. Because there is no way that Windows can know whether Baycom is involved in an I/O operation at a particular moment, Windows cannot know when it cannot interrupt Baycom, and interruptions to Baycom's intensive processing will corrupt the data it is sending or receiving.

What you can say for sure, is that running Baycom under DOS you are really getting your money's worth out of your CPU, it is probably working harder for you than it does in any other program you use.

Tim,

Seems like a reasonable idea, if a format can be agreed upon.

If the callsign of the destination station could also be encoded on the QSO label by the logging program, then the buro could use that for more accurate and efficient sorting and forwarding of cards.

: help that.

: How do you send CW in Japanese, Chinese, Hebrew, or Arabic?

: Rich
: KF2JO
: richwood@commspec.com

It has been said before, and for those not familiar with proficient Morse operating, I'll repeat it:

No. Morse is not a true language. However, using common Morse abbreviations, pro-signs, Q signals, and standard numbered messages, communication between two people who do not share a spoken proficiency in a common language is possible. We do it every day. Most amateurs around the world have enough knowledge of these procedures (in limited English) to make this possible.

This is the common "language" of world-wide amateurs. It also would work on other digital modes...packet, amtor, rtty, etc. However, the great utility of Morse in this context is that it is a mode currently available to virtually every ham in the world. The other non-voice modes are not in use by most of the world's amateurs at present.

This is not meant to be an argument in the CW/no CW argument. Just a bit of information for those who may not be familiar with "state-of-the-art" Morse operating practice.

> Interested in joining QCWA. I live in newport RI...any info appreciated.
> Tnx Russ (nz2d)

Membership in QCWA is open to any licensed amateur radio operator who was first licensed at least 25 years ago, but you need not be continuously licensed throughout that period.

You can get an application form by writing or calling QCWA at:

Quarter Century Wireless Assn., Inc.
159 East 16th Ave.
Eugene, OR 97401-4017
(503) 683-0987
(503) 683-4181 FAX/BBS

There are QCWA chapters scattered throughout Canada and the United States (indeed, we also have several international chapters), but I don't see one listed anywhere in Rhode Island. HQ could tell you if there's a new one, or whether there's enough of a critical mass of members to think about starting a local chapter.

1139. KF2JO asks how to CW in Japanese

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-29 17:14:30 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9501291714.AA16912@metro.mccneb.edu>
Source record: 252839

Rich KF2JO asked about CW communicating in Japanese. Look at page 17-26 in ARRL Operating Manual, 4th Edition. There is a chart of CW code for Japanese, Korean, Arabic, Hebrew, Russian, and Greek. That's how they do it.

Also, next page, same publication -- short note on origin of "73" as a message.

Several similar questions to this have recently appeared in this amateur newsgroup. You will find a greater expertise in answering if you post questions like this in rec.shortwave. There is good expertise there in matters such as these. Contrary to what some believe ("these are future hams, pre-hams, or ust not up to ham level"), these are people pursuing a separate radio hobby with a different knowledge base. Many there would immediately recognize this as the NATO station at Lisbon, Portugal.

1143. Re: Intermod; Kenwood, Yaesu, Icom ??

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-29 18:21:29 UTC
From: wcoyle@delphi.com
Message-ID: <xG76SNZ.wcoyle@delphi.com>
Source record: 252843

Well said....

I have a Yeasu FT-5200 and the intermod was so bad, I pulled it from mobile service and I'm using it on packet. I was very dissapointed with it in a mobile configuration, but I'm pleased with it in packet use (my QTH is relitively intermod free, while some areas I drive through, especially the Middletown Twp. ,PA. area is very bad for intermod). I, also have a Radio Shack HTX-202 Ht, and I'm very happy with it. It's the best 2 meter HT I've ever owned, especially for the money. If one of the big Japanese radio producers would produce a mobile 2 meter rig, that only recieved 144-148 and had a tight front end, I would buy it. The problem is, they all thing we want the "DC to Light" recieve. I think it's time we let our opinions known to the manufacturers, this way we might just get what we want!

Ok, folks this has gotten a little out of hand for this area of discussion, and it no longer relates to the Amateur radio community. It may be time to move this discussion to another forum, perhaps something on internet policy. Seeing as this ad appeared in several newsgroups, it would be better to discuss it in a central location and leave this area to Amateur radio!

Patty L. Ramey (Loveless)
KD4WUJ
Her husband, Emory Gordy Jr. is W4WRO.
There is a picture of Patty in the October 1993 QST sitting at the
rig at her home.
I read an interesting story about how her husband was in the hospital
(accident-illness, not sure) and they would communicate by tapping
morse code into each others hand.

: in ARRL Operating Manual, 4th Edition. There is a chart of CW code for
: Japanese, Korean, Arabic, Hebrew, Russian, and Greek. That's how they do
: it.

Arrrgggghhhhh........ on a personal note .... the JA morse code is
a real bear to learn .... and completely confusing if you are any good
on Int'l morse ...... at least in my case. In my experience I have
found that JA ops ... who are required to be even more proficient
in Int'l Morse than in JA Morse ... have relatively no difficultly
in copying "romaji" style Japanese in QSO .... although it may be
marginally easier to copy for them using the Japanese phonetic
alphabet. Personally, I have only met one American Ham who could
copy JA CW at a high rate of speed .... unfortunately I don't
think he ever really understood anything that he copied becuz
he learned it during WWII while in the US Navy.

As a side note .... if you hear JAs on the low end of 40m calling
CQ CQ -.--- that means they want a Japanese Morse QSO; and when
you hear the same character in the middle of a QSO - it means they
are switching from one code to the other.

Cheers

I wish I had known about C-W Crystals before buying some FT-243s from Jan. The same xtals are much cheaper at C-W and work just as well for me on an old Drake 2-NT tx. I discovered C-W in the Ham Ads of QST. The address is 570 Buffalo St. Marshfield, Mo. 65706.

This may be of no help to you at all, but at the FTP site

sumex-aim.stanford.edu
(I think) in the directory /app

(and all its mirrors) there is a Macintosh-based code-learning program.
It is called MorseTrainer, and is available in US English as well as
several international versions. It's about a year old. The program has
been extremely helpful in my quest to learn CW, but alas, it's a freeware
program, and only transmits code and doesn't let you practice keying.

I'm also looking for any kind of shareware (Mac based) which lets one
practice the Novice/Technician exam. If anyone knows of any, please
e-mail me at "andyneal@ocf.berkeley.edu"

You can contact the author of MorseTrainer, Lars Sundstrom, at:

Department of Applied Electronics

If you can't find them, why not just use a piece of threaded stock the
right length with to nuts screwed tightly to each other in the middle?

In article <3g1qpb$9fm@cronkite.seas.gwu.edu> gringo@gwis2.circ.gwu.edu (Nicholas Rian Grace) writes:

>The International Amateur Radio Network (IARN) is a worthy organization
>that has aided the recovery of disasters in Mexico, Bougainville (Papua
>New Guinea) and Somalia, among others. Let's give Glenn Baxter some
>credit!

The IARN seems to me to be an organization created and funded by Glenn Baxter (who is reported to be quite wealthy) for the primary purpose of enhancing Glenn Baxter's ego. The IARN has in the past ignored good guidelines for emergency traffic handling... such as letting the stations in the affected area determine what is needed, letting those stations control communications (as good amateur practice and good emergency handling require), and coordinating with local officials of the affected area or country.

Let me tell you about how it "aided the recovery of disasters in Mexico..."...

I went to Mexico City in 1985 just after the earthquake to help out with communications. I knew nothing of K1MAN or the IARN. I stayed with and assisted a Mexican ham who was operating on 14.275 - not knowing anything about IARN. We handled thousands of health and welfare messages, BUT...

K1MAN demanded to control the net, even when his station was under attack by a hurricane, and while propagation conditions prevented him from having adequate contact with Mexico. We spent hours of net time trying to satisfy him and keep him happy - time that could have been spent passing traffic.

So yes, IARN helped in the sense that it's frequency was used to pass the traffic, and some of its members passed it. Baxter, however, by the time I was there, hindered the communication by his attempts to control the network in spite of lousy propagation, and the fact that such networks are best controlled in accordance with the wishes of the station or stations in the disaster area. During the Mexico earthquake communications emergency, almost every frequency on 20 meters was tied up with earthquake traffic. Nets existed on whatever frequency a Mexican station chose to operate on... not because of their pre-existence or organization! [I should alss point out that the ARRL did not have active participation, because they could not get permission from the Mexican government... something many other nets ignored. You can decide for yourself whether this is a good or bad thing]

As soon as I got
back to the US from the trip, I called K1MAN (I still knew nothing of his reputation or of the IARN, but I sensed something strange was going on) to touch base. I got a chilly reception, and after he asked me some bizarre and leading questions, I realized that he was trying to trap me into saying something

that would incriminatet the ARRL (since I was an ARRL OOC at the time). I asked him if he were taping the phone call and he admitted he was. The rest of the call continued in a similar bizarre vein. It was far from the cordial conversation between two people involved in the disaster that I had expected.

Later I got calls from the editors of several ham magazines stating that they had gotten letters from Baxter implying nasty things about myself and others who had been instrumental in passing the traffic (carefully phrased in a manner which was not quite libelous - but interestingly, sent on Collins Radio Company letterhead), . A copy was forwarded to me and indeed it was quite nasty... implying that I was sent to Mexico by the ARRL to wreck the IARN operation! [The ARRL tried to talk me out of going, since they had no formal invitation. I paid my own way and went because I had accumulated a long list of H&W traffic that I couldn't pass from this end, and because Carlos in Mexico needed assistance.] Furthermore, Baxter apparently filed a complaint with the FCC against me for "interfering with emergency traffic!" Remember, I was on the scene of the emergency, passing traffic, while he was 4000 miles away, but he claimed that I was interfering!!! (By the way, very little of the traffic was emergency traffic anyway... it was mostly health and welfare and routine logistical information). I checked with the FCC's Washington office and they told me that they didn't know of such a complaint, since they routinely threw away all complaints from Baxter without reading them, because he was such a nuisance.

For some reason Baxter put me on his IARN mailing list, and for a while after that I routinely got copies of newspaper articles describing Baxter as essentially God's gift to the victims of disaster, and other material making it clear that IARN was Baxter's ego machine.

It also became clear that K1MAN believed that the ARRL and the FCC were out to get him. The FCC did try to go after Baxter for his various violations but were stopped, reportedly because Baxter was backed by a senator from his home state and could not be touched. That senator is no longer in congress. Baxter's reputation for litigousness may also have been a factor.

Since that time I have monitored K1MAN when he used his station on the IARN net to allow news reporters to communicate on ham frequencies (and not coincidentally getting K1MAN on national news), in direct violation of FCC rules, which were clarified by the FCC because of similar happenings by several stations during the Mexico earthquake communications emergency. It is reportedly well known in FCC circles that Baxter has violated the rules a number of times and ignored FCC instructions to cease doing so.

IARN, of course, has well meaning members in addition to egomaniacs and other defectives. But IARN is (or was... I haven't checked recently) owned lock, stock and barrel by Glen Baxter and is/was his instrument, not some democratic charitable organization.

I have also heard that Baxter was involved in the 14.313 imbroglio but have no details to support that.

As far as comments to ask OO's to do something about Baxter, let me mention that until recently I was the OOC of Arizona, and know that OO's are already well aware of Baxter's activities, and have filed a number of complaints over the years with the FCC, all to no avail. I used to get several complaints a year from hams in Arizona.

If you want your ham frequencies to be used for the aggrandizement of one man's ego, even to the extent of providing commercial organizations the use of our frequencies (ie, news gathering outfits), then go ahead and defend Baxter. I know better. Among the most active individuals in national ham radio, this information is widely known but rarely said (except to each other).

By the way, I believe that this is my first public statement revealing this information. In spite of my silence on the subject, someone, apparently associated with IARN, once again a couple of years ago released another attack on myself and others for our actions with the Mexico City earthquake operation.

As a former OOC, I would agree with this in most cases.

However, sometimes it takes more heat to get the fire started. It takes lots
of letters and petitions and affidavits (from those who have actually
heard illegal activity). The ARRL, OO's and the FCC are WELL aware of Baxters
activities.

>Please, I ask you--take the time to monitor and find out what's really going on.

Speaking as one who things K1MAN ought to be tarred and feathered, let me point out that what you say above is mostly correct. Many of the broadcasts are legal, if obnoxious. But some activities of K1MAN don't appear to be (see my detailed posting above). And it is not at all clear that airing the same information 75 times a week is legal. When a bulletin station starts acting more like a beacon, it should follow beacon rules!

SB DX @ ALLBBS $OPDX.192
Ohio/Penn DX Bulletin No. 192

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 192
BID: $OPDX.192
January 30, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WA2VUY, WB3JFS, NI6T, N8AC, NW8F, K8YSE, 3A2LZ, DC3MF, JA0BYS, JH2PDS, SM0CNS, DF4RD and DL7VEE the DXNL for the following DX information.

160 METER INFORMATION NET. SP5INQ and UA9CBO run a weekly information net for 160 meters on Saturdays, on 14339 kHz at 1230z.

3A, MONACO (NEWS AND EVENTS). Daniel, 3A2LZ, informs OPDX of the following events taking place in 3A-land. The Monaco Post Office is issuing a special cancellation mark in commemoration of the 40th anniversary of the Association des Radio-Amateurs de Monaco's existence. The dates of issuing the special cancellation mark mentioned so far: February 17-26th on letters, February 27-March 12th on postcards, and April 17-24th on letters.
The International Rotary Conference will be held this summer in Nice, France from June 10-15th. The ROARS station will be in Monaco at the Loews hotel and a special callsign will be used for this occasion. Look for 3A2RAR (Rotary Amateur Radio). QSL via 3A2LZ.

3D2, CONWAY REEF. A group of four amateurs plan to challenge the solar cycle, winds, sharks, reefs, birds and "the notorious native ticks" to give the deserving a shot at this rare DXCC country. The group expects to arrive on Conway Reef on March 24 and stay until April 3. This will provides two full weekends on the reef, with the first coinciding with the CQWW SSB WPX contest. They plan to use three 1 kW stations, of which two will be on the air at all times. There will be beams for all higher bands, including 12 and 17 meters, and verticals for the lower bands. Emphasis will be on the low bands (including 160 meters), the WARC bands and RTTY. European stations will be a major objective at all times.
The operators presently are: Mats/SM7PKK, Pekka/OH1RY, Nils/SM6CAS and Garry/NI6T. They will be seeking one additional adventurer to join them. Callsigns have not yet been issued, but will be available shortly.

Suggested frequencies:
CW - 1823, 3503/3523, 7003/7023, 10103, 14003/14023, 18071, 21003/21023, 24893 and 28023 kHz
SSB - 1843, 3785, 7085, 14195, 18115, 21295, 24935 and 28495 kHz
RTTY - 7030/7082, 10120, 14082, 18100, 21082 and 28082 kHz

There will be two QSL routes. For SSB: Philip Marsh, G4WFZ, Orcheston Road 28, Bournemouth, BH8 8SR Dorset, Great Britain. For CW/RTTY: Mats Persson, SM7PKK, Zenithgatan 24 # 5, S-212 14 Malmo, Sweden (Do not use any other address for SM7PKK). This DXpedition will be costly. Donations by individuals and groups will be greatly appreciated. Donations and questions should be directed to Mats, SM7PKK, team coordinator.

4E, PHILIPPINES. Tom, SM0CNS, will stop using the callsign SM0CNS/4E7 after January 31st and begin using SM0CNS/DU7 again. The 4E7 prefix was used to celebrate the Papal visit to the Philippines. Tom continues to be active on 160 meters (1827 kHz) around 1400z and again from 2000z until his sunrise at 2200z. QSL to: Thomas Bevenheim, Villa Sea Q, Ronda, Cebu Island 6034, Philippines.

ANTARCTICA ACTIVITY. Brian, KC4USB, is active from Byrd Surface Camp until February 10th. He can be found daily around 14270 kHz after 0030z. Henry, KC4USX, is active from Williams Field daily around 14270 kHz after 0300z. KC4AAG is active from Terra Nova Bay (new base), and also frequents 14270 kHz after 0300z. QSL all stations via K4MZU. Eddie, VI0ANT, is active from Davis Base (Australian) and continues to be active on 40 and 20 meters CW at various time. QSL via VK4EET.

DU0, SPRATLY ISLAND. (UPDATE) Bobby Garcia, DU6BG, (President of the Philippine Amateur Radio Association - PARA) will be leading an all Philippine team (no foreign operators will be allowed because of security reasons) to Spratly to activate DU0K on all bands and modes from April 10-16th. QSL via DU9RG.

ET, ETHIOPIA. ET3BT has been showing up on the 14226 DX Net around 1830z. QSL to Box 6128, Addis Ababa, Ethiopia.

J2, DJIBOUTI. J20UFT, who was active this past weekend on RTTY on 20 meters, mentioned his QSL Manager's (F5LBM) address in the callbook is incorrect. The correct address for F5LBM is Patrick LaBeaume, 38 Chemin Du Plateau, 67500 Hagueneau, France.

SOUTHEAST ASIA DXPEDITION. Information from the Tokyo Packet Cluster, reports JA2EZD will sign from Thailand (HS), Laos (XW), Vietnam (3W,XV) and Singapore (9V) from February 10th. No callsigns or bands of activity were mentioned.

SV/A, MOUNT ATHOS. Apollo, SV2ASP/A, was heard with DL5EBE working stateside station on 18140 kHz between 1315 and 1345z.

TN, CONGO. German members/friends of NODXA will be active from here until about February 29th. Permission to operate from the CONGO has been approved by their Secret Service and the licenses will be available upon their arrival in Brazzaville. The group departed January 25th and is

expected to arrive in Brazzaville on the 26th of Janaury. No word on their activites as been heard as this bulletin was being printed. There will be six operators: Holgert/DL7VTM, Birgit/DL7VTZ, Tom/DL7UTM and possibly Falk/DL7UTA, Fritz/DL7VRO and Silke (callsign unknown). They will be taking two complete stations (2-Yaesu FT-890`s, 3 Yagis, Linear Amps) and they plan to operate the satellites also. They are hoping to receive the following callsigns: TN4U for the ladies, TN4M for SSB and TN5N for CW. Frequencies will be plus or minus the usual DX frequencies. Meanwhile, a station signing TN9DX was heard on 40 meters CW between 2045 and 2345z. Station was saying QSL via N4ZA. WFWL!

VP2M, MONTSERRAT. (CORRECTION!) In last week's bulletin we mentioned that Art, WA2UJH, would be active from February 16-26th, but the QSL information was reported wrong (your editor was too quick with the fingers on the keyboard... hihi). The correct QSL route is via NW8F, not NW2F as reported.

VU7, ANDAMAN ISLANDS. According to VK4AAR on the Southern Cross Net, VU2JPS is active now from the Andamans. He is active only on 40 meters SSB, but may be active on the other bands soon. Check 7060 kHz around 0200z and 0730z. QSL via VU2JPS.

YA, AFGHANISTAN. (UPDATE) It is reported that John, YA/PA3BTQ, is reportedly in Mazar-i-Sharif with the International Red Cross and will be there for two more months. The operator was heard saying he would have antennas up for all bands including the lower bands at the end of January. QSL via CBA. WFWL! There have been no QSNs reported since last week, January 22nd.

ZL9, AUCKLAND ISLANDS. A group is headed to the island to do geological studies and make a documentary movie about this island group. In the this island group there is one larger island and five smaller islands, with several detached islands and rocky pinnacles. The complete team consists of 15 people, some scientist, a group of movie-makers and two ham radio operators. Leader of the expedition will be Dr. W. Juster, a geologist. The expedition to Auckland Island is planned to start on the 28th of January. The duration will be 18 days.

SPECIAL NOTE FROM EDITOR: There will probably be no bulletin next week (February 6), because of some personal activities. Please keep sending your DX information. (You may never know, I may put one together before the weekend, if I receive enough information.)

ONLY 2 MORE DAYS LEFT TO PARTICIPATE IN THE OPDX/NODXA DX SURVEY!!!! KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following packet and online addresses listed below.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

SB ALL @ ALLBBS $OPDXNODXA.9
OPDX/NODXA 1994 DX Survey

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995,
with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding
in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most
well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the
following format below.

```
---------------------------------------------------------------------
Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group
and QTH | | |
---------------------------------------------------------------------
CHOOSE YOUR MOST WANTED COUNTRIES. (Please list only 30 of your most
wanted countries. List CW and SSB modes separately.
CW - AB,CD,EF
SSB - GH,IJ
---------------------------------------------------------------------
I work: [ ] only CW [ ] only SSB [ ] both CW/SSB
---------------------------------------------------------------------
Comments on DXing in 1994: (Text Any Length)
---------------------------------------------------------------------
```

* Just Fill-in The Blanks And Send It To One Of The Three Address:

NE>In article <3g4518$bhi@gort.oit.umass.edu>,
NE> aswNS@hamp.hampshire.edu (Albert S Woodhull) writes:

NE>| I have often read recommendations that mobile equipment be installed with
NE>| two power leads direct to the battery positive and negative terminals,
NE>| and that both leads be fused near the battery.
NE>|
NE>| I have never understood the logic of the fuse in the negative lead. It
NE>| tends to presented as revealed truth. Can sometime justify it?

I am the Installation Manager of a Motorola shop here in town. You
should never -need- to connect the negative wire of a radio directly to
the battery post. This opens you up for ignition/fuel pump noise. It
doesn't always happen but often enough to not do it. Ground the radio to
the firewall or floorpan of the vehicle. However, if you simply MUST run
the negative wire to the battery you MUST put a fuse in the lead at the
battery. The main reason for doing this is in case the vehicles ground
lead becomes disconnected (for what ever reason, like corrosion or
stupid mechanics) then your car WILL NOT be able to pull the extreme
current from running the engine THROUGH your expensive ham rig and that
thin little negative lead wire and burning your car up in the process.
The main thing to remember about ground leads is to keep them clean,
keep them short, and keep them direct. <<end of sermon>>

(advertising deleted)

I love browsing through QST and CQ looking at all the ads. That's one of the reasons I subscribe to the magazines...and one of the reasons I can afford the magazines...because advertisers PAY for their ads.

Wouldn't it be great! Wouldn't it be great if every one of those advertisers posted an ad right here on the internet every day!? Just think of it! No more waiting for the mailman each month! And if they used WWW, just think of the great graphics! And sound! Wow!

(Tongue-in-cheek mode off)

Each of us knows...or should know...that this sort of advertising is contrary to internet policy. I am considering purchase of a CD ROM for callbook reference and was having a difficult time deciding among the several available. Now that job just got easier...scratch two possibilities off the list. Thanks much.

Hi folks. Can someone give me some info on this guy I hear on 14.300 ssb. I live in N.Y. and every mid-afternoon I hear this nut and he keeps saying "Herbie baby #1". Then he goes a little off if someone gets on his case. I'm just curious if anybody has heard him and what his story is! The guy doesn't seem to be playing with a full deck. He doesn't I.D. himself as required by ALL amateur radio operators either. He seems to be a regular on that freq.

|>>to the battery terminal.
|>
|>And then the fuse in the power lead opens.

I think you missed the previous post. The current draw being discussed isn't from the radio perse, it is from the starter. The ground path for the starter is generally from the starter through the chassis to a strap going to the negative terminal of the battery. If that strap breaks, now your radio is the only connection from the car's chassis to the battery's negative terminal. Hence it takes all the current your starter tries to use until either the car starts (goodness), the ground wire melts (not so good), some PC trace from the radio's case (grounded to the chassis) to the negative power lead blows off the board (very bad for the radio).

As others have said, a $2 fuse and holder is pretty cheap insurance.

73,
Todd

1185. Tone burst for ICOM W21AT?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 08:48:31 UTC
From: oprafa@news.cica.es
Message-ID: <3gi94v$st6@obelix.cica.es>
Source record: 252931

Hello!. I'm a proud owner of a W21AT unit. I've got all the
useful sw mods provided for my HT, but I'd like to know how
could I get, if possible, the characteristic European
1750 Hz tone call for repeaters, etc. . Because of the
HT model (AT), there's no tone burst although there is
a keystroke for it...

Is there anyone who knows the mod...?

Thanks in advance,

Rafael Perez Rosales

Hi Bill,

The only way I know of for the STA indicator to be affected as you
describe is if you are not using the AEA provided RS-232 cable.

It so happens that pin 22 on the PK-232's RS-232 connector (usually used
as the 'ring indicator' pin for phone modems) is actually used by the
PK-232 as part of the parallel port that's sometimes used for direct
printing of FAX or text.

In the case of pin 22 specificly, an output from the Z8536 in the PK-232 is connected to pin 22, and also connected to the LED driver for the STA indicator. On a normal PC RS-232 port, pin 22 (or it's 9-pin equivalent) is also an input. Therefore this conductor is basicly 'floating', and a prime suspect to act as an antenna to pick up stray RF.

I'll bet you find that if you use the original cable that came with the PK-232, or if you break off pin 22 (which should not be connected anyway), that you will solve the STA indicator problem.

Not doing one or the other of these >does< have the potential of damaging the Z8536 chip in your PK-232 - and those guys are both not easy to find, and not cheap. I know - at AEA I sold lots of them.

73, and good luck!

From: rwilkins@ccnet.com
Message-ID: <3gif1p$s7j@ccnet3.ccnet.com>
Source record: 252933

Mike Morris (morris@grian.cps.altadena.ca.us) recently wrote in
<1995Jan27.090102.9353@grian.cps.altadena.ca.us>:

: In my old Graybar Telephone Products catalog they show ITT 16-button
: pads as orderable parts. If the matching faceplates are available

We used to order the lighted 16-button pads. They were similar to the old
princess dials with illumination from beneath. Those lighted Autovon pads
still command a high price at flea markets today. The FO key had special
meaning on a lot of repeaters ;-) many many years ago.

It's always the fourth full weekend in June. Usually that's the last full weekend, but not always.

: The best reason I have heard is this:

: Suppose that for some unfortunate reason your ground cable is broken,
: [the cable that connects the negative terminal of your battery
: to the frame of the car]
: coroded, or disconnected, and you go to start your car. Now the
: negative battery terminal is only connected to the ground of the
: car by means of your radio power supply wire, a few components
: in your radio, and the cable that attaches your antenna to
: the metal ground of your car. All the amps that your starter
: is trying to draw are being pushed through the sensitive
: components of your radio, probably frying them.

Except I NEVER connect up the radio until after I start the vehicle and
if it stalls I disconnect the power first before restarting.

>Axe murderers, bank robbers, cannibals, politicians... etc.

By far the most notorious has to be Richard Burton former WB6JAC now known as just N6 or the "mystery guest". Has been jailed three times for talking on the radio. Now just listens on a scanner but still gets rebroadcast through the telephone occasionally by a few not so law abiding hams. The FCC once sent a helecopter just past the state border so they could pick up his signal out of state so it could be considered a federal matter.

Another recent development is the ham Tim Seawolf KJ5KE was never in trouble with the FCC. He declared on the air war with the CLARA repeater group. CLARA had to take him to court twice to restrain him legally from using their repeater. During his tirade their machine was made totally useless except for jamming, which seems to have lasted for nearly a year. Now the CLARA repeater club is a small fraction of its previous size after most of its members realized the corruption in its higher ranks. I heard one clara member was convicted of murder.

On another repeater their was Jeff Bregal KD6NBD who has been jailed for what I understand to be 5 DUI's, needless to say his radio practicies were less than perfect. Keven Mitnick, the notorious hacker was also a semi-active ham.

The cheapest crystals are computer clock crystals. If you can redesign
your circuitry to use the readily available frequencies you can reduce
the cost of the crystals to $1 to $2 quite easily. Unfortunately, as
more and more people do this the market for custom crystals shrinks--so
you can expect the cost of custom crystals to rise (it is tough to
shrink the cost of doing business when sales drop).

Anybody know?

1199. Need Examples of "Ham-Friendly" Tower Zoning Reg.'s

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 15:12:16 UTC
From: mebly@Glue.umd.edu
Message-ID: <3givkg$72c@eiffel.src.umd.edu>
Source record: 252943

In an apparent effort to control cellular telephone communication towers, the county I live in is amending its zoning regulations to address towers. Their first cut at the regulations is not very good. This appears to be due to ignorance, not an effort to regulate ham radio antennas out of existence.

Unfortunately, it appears they are going to regulate towers. Can anyone provide examples of "ham-friendly" tower zoning regulations? I've been talking to the cellular phone people and the county people and I think that we can influence the final regulations.

Please send any relevant information you can to me via e-mail. Thanks in advance and 73.

In article <3gipq5$6s5@acme.freenet.columbus.oh.us> jtesta@freenet.columbus.oh.us (Joseph Testa) writes:
[Much about why to fuse the negative lead if it is connected to the battery]
-Except I NEVER connect up the radio until after I start the vehicle and
-if it stalls I disconnect the power first before restarting.

This may not help. If by 'connect' you mean 'turn on', remember, the power switch is in the postive lead; which plays no part at all in this scenario. If you just leave the power leads floating, you have to make sure that the negative lead can't contact the car's chassis when unplugged. If it can, FUSE IT! If it can't (i.e. power is a Cinch Jones plug and there is no chance for the negative to melt/abrade/etc), the fuse isn't needed. But for $2, it is very cheap insurance, and it really doesn't cause any problems. The only time not to fuse the negative lead is if it is grounded to the car body (*not directly to the battery*) such as to a bolt behind the dash.

Just look at the circuit and check out how the current will flow in a fault.

```
(+)-+-starter--engine----body---strap-+-(-)
| | |
\-fuse--radio--+--------)---fuse--/
\antenna/
```

Now open the strap, and trace what will happen.

V31MG asked me to send him some Ham Radio software using the sound blaster card. I don't use the card and am not familiar with any software that does use it. Therefore, I would like some suggestions on what I should send to him and where I can FTP it from. He was very general in is request. He just wants something he can tinker with (SSTV/FAX/RTTY etc.).

Thanks for the Suggestions,

John

Source record: 252955

2-meter SSB/CW ops may want to keep their antennas pointed towards New England this coming weekend, February 3-5. The Maine, New Hampshire, and Vermont QSO Parties will be running during this period and 144.2 MHz (+ or -) is listed as one of the designated operating frequencies. Given any kind of decent tropo enhancement, this may be your opportunity to work some of those New England grid squares.

See the Contest Corral in QST for details of the operating times for these QSO Parties.

I am new to this, but I am wearing my asbestos boxer shorts, so flame away if you feel the need.

My brother has started racing SCORE off-road (Baja 1000, etc.), and I have offered to run chase & logisics support for him. The radio he has in his racecar has 10 channels in the ~ 150 to 153mhz range for communications with various pits and race officials. The only radio equipment I currently have is a CB in my truck and a Uniden BC200XLT scanner.

First question:
I found out the antenna on my scanner only works when he is within a few miles of me. Other teams use a large antenna mounted on a mast. Could I use a 2 meter antenna and tune it for reception in this range? Or better yet does someone have a good design (I have much more time, tools, and materials than money) for a omni-directional antenna? The connector going into my scanner is a male BNC.

Second question:
Once I have a good antenna, could I use a tubular aluminum pool brush handle for a mast (~20' long)?

Thanks in advance for any help!

Dave

I'm very curious where you discovered the information that indicates
it "... contrary to Internet's policy ...". As far as I know, there
IS no such entity as "Internet" to have a policy. Could you be a bit
more specific where you located this policy information? Any sort of
reference will do: ftp, email, http, whatever. I'd like to review
the policy you are talking about before making any further comments.

Hope it is not to late to let you know that the L A S T Novice Round-up is in progres as I write this note.
Would encourage any ham to give a hand to this event and in a small way give back to the hobby what the hobby give us.

In a nut shell it is a test in patient and skill to make a QSO with a ham that is begining in ham radio contests.

If every G/A/E will make just one QSO with N/T we will have one of the most memorable Novice Round-Up's ever.

From: bfredric@pcug.org.au
Message-ID: <bfredric.1.0013CB92@pcug.org.au>
Source record: 252887

A friend of mine has recently returned to Australia after living overseas for 5 years. He owns an IC W21 A7.

Unfortunately the IC W21 A7 is set up for the US band plan and is next to useless in VK. However there is a E7 version of this rig which is designed for the rest of the world.

ICOM in VK have apparently told my friend he should have purchased the rig in VK (5 years ago?) and are unable to supply a fix to convert the A7 to an E7 model.

Seems to me that the band parameters are probably contained in either an eprom or is set by some dip switches. Does anybody know how you can change the band settings of this rig? I can't believe that you are expected to own one of each if you have to live overseas for a time.

thanks in anticipation,

1220. Can HAM radios interferre with TV/Cordless Phones?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 20:14:55 UTC
From: bair@sparki44.ih.att.com
Message-ID: <D38Iwv.Mpy@ssbunews.ih.att.com>
Source record: 252970

All,

My folks have been having BIG problems with reception lately and they seemed to think it's a HAM operator. Since I know nothing about HAM radios, I thought I would check out their reasoning.

Starting Friday evening and going through most of Saturday on and off, someone can be heard cutting in and out while on the cordless phone. The phone is an AT&T 5100(?) which supposably has some sort of coding scheme. I had thought that it was just another cordless nearby until my folks pointed out the television. Whenever you could hear the person interferring on the phone, the television reception would get numerous lines through it.

You can't make out what their saying at all, but you can make out a voice at times. Could this be a HAM operator? Or some other peice of equipment?

Thanks,
Matt

1221. Who makes small TNC's?

1222. ANNOUNCING: Kentrol 5.0 with SkedMan now available!

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 20:28:41 UTC
From: brian@kentrol.synapse.net
Message-ID: <brian.2.00147AFF@kentrol.synapse.net>
Source record: 252889
Cross-posted to:
rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.shortwave,rec.radio.amateur.equipment,uk.radio.amateur

The leading edge in rig control software just moved forward!

Kentrol has a new version 5.0 and a new partner, SkedMan.

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them you are most welcome to do so.

You can obtain both programs by anonymous ftp from:

ftp.synapse.net/shareware/kentrol

The filenames are, oddly enough, kentrl50.zip and skedmn10.zip.

There is also a Kentrol site on the World Wide Web, for those who have WWW access. At that site you can read the documentation and preview the interface, as well as download the files. The URL is:

http://www.synapse.net/Kentrol/Kentrol.html

Kentrol is also available from major radio-related ftp archives worldwide and on CompuServe, and there are linkds to the Kentrol Web page from all the best ham & swl pages.

Try it. You'll like it!

Apply for scholarships

The Foundation for Amateur Radio will administer 56 scholarships for
the 1995-96 academic year, to assist licensed amateurs who are
students. The awards, from 500 to 2000 dollars, are available to
full-time college students, including those who have been accepted
for 1995.

FAR, composed of more than 75 Washington, DC, area Amateur Radio
clubs, fully funds five scholarships with the income from grants and
its annual hamfest in Gaithersburg, Maryland. The remaining 51
scholarships are administered by the foundation without cost to the
various donors.

For more information or application forms, contact FAR Scholarships,
6903 Rhode Island Ave., College Park, MD 20740, before April 30.

From ARRL Headquarters
Newington CT January 30, 1995
To all radio amateurs

SB SPCL ARL ARLX009
ARLX009 10 GHz record correction

10-GHz record correction

A recent bulletin reported that Roger Bowman, VK5NY, and Walter Howse, VK6KZ, have claimed a new world distance record on the amateur 10-GHz band. The two worked over a 1911-kilometer path, on December 30, 1994.

The previous world record of 1660 km was set on July 8, 1983, by I0SNY/EA9 and I0YLI/1E9.

The 10-GHz record of 1018 km cited earlier was the North American record, set by WA6CGR and XE2/N6XQ, in August 1993.

Not really. A great country ought to be able to take a great
deal of slagging, and still hand out honours for significant
achievement. I don't think we want to kind of McCarthyism
that got peoples careers ruined for what they said.

1228. alt group ??

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 22:34:13 UTC
From: wb9omc@constellation.ecn.purdue.edu
Message-ID: <3gjph5$put@mozo.cc.purdue.edu>
Source record: 252971

Several months back I posted the question of how many hams were interested
in creating a new group to be tentatively called

rec.radio.amateur.tenten

The response was not large enough to warrant creating a full-blown rec.*
group, I don't believe, but seems to suggest the creation of (possibly)

alt.radio.amateur.tenten

The original responses went something like this:

13 were in favor of having rec.radio.amateur.tenten (14 if you count me :-))

none were outright against it

2 suggested having a mailing-list in preference to a newsgroup

1 suggested creating it first as an alt group

5 made other comments

==========

I will reiterate the original purpose. A newsgroups for hams who are
members of Ten-Ten International to discuss organizational related topics
and activities.

I think what I need at this point in time is a ham who is also a sysadmin
who can create the alt group. If at some point it grows enough in
size and activity, then we may need to consider going through all the
discussion and voting and crap to become a regular rec.group.

Got any entitled sysadmins out there?

Duane

1229. Re: Anyone get a card from XF4M?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 22:35:47 UTC
From: kchen@apple.com
Message-ID: <3gjpk3$3ua@apple.com>
Source record: 252969

dara@physics.att.com (Shel Darack) writes:

>During the contest weekend of Oct 30, a station signed XF4M.
>QSL info was AA6BB or JH1AJT. It's possible that neither
>is correct. Has anyone received a card?

The manager for XF4M during the CQWW Phone '94 is indeed Jerry, AA6BB.

I had sent Jerry a card for XF4M and one for 9M8X, hoping that,
since he is Martti's manager for VR2BH, that he is also handling the
9M8X cards.

Well, Jerry sent back a note saying that 9M8X's manager is KU9C
(Derek, AA5BT, had told me the same thing, but after I had written
to AA6BB) and that he was waiting for the XF4M cards to come back
from the printers. This was maybe a week ago.

Yet another nice QSL manager!

73,

Kok Chen, AA6TY kchen@apple.com

Has anyone ever considered a group for ham software. The network gets clogged ith X-rated GIF's. Certainly it can stand something useful. I often see people looking for software on here.

1231. Mobile antenna mounts

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 23:28:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A29418.00CB002267.uuout@camel.com>
Source record: 252973

I need a good, affordable 2m/70cm antenna for a hatchback. I think I

want to mount it on the side of the hood using a trunk lip type mount.

One questions though -- there are several types of

antenna-to-antenna-mount connecting systems, LM, NMO, SO-239, and NLA.

Any recommendations? Thanks - Robert WD5AAT

1232. TM-732 vs TM-733A

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 23:29:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A29419.00CB002268.uuout@camel.com>
Source record: 252974

Can anyone tell me what additional features the Kenwood Tm-733A has over

the TM-732? Thanks. Robert WD5AAT

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z JANUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 JANUARY AND FORECAST FOR 31 JANUARY - 02 FEBRUARY

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 29 Jan
Daily Proton Fluence >1 MeV: 4.4E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.5E+06 (normal)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 Jan 01 Feb 02 Feb
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 Jan: 88/32

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 29 Jan
Learmonth 26 5334 4444
Fredericksburg 26 24
Planetary 35 19

Observed Kp for 29 Jan: 1424 4345
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 Jan 25 Active
01 Feb 20 Active
02 Feb 15 Unsettled
COMMENT: IPS Geomagnetic Warning 2 was issued on 25 January and is
current for interval 30-31 January. Active conditions may extend
beyond 31 Jan.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Jan normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Jan normal fair poor
01 Feb normal fair poor
02 Feb normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
30 Jan -34 15 to 30% below predicted monthly values

Predicted Monthly T-index for January: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
31 Jan 0 10 to 15% below predicted monthly values
01 Feb 10 About 5% below predicted monthly values
02 Feb 15 Near predicted monthly values

1234. info/look for W5PLX

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-30 23:29:11 UTC
From: nx7u@primenet.com
Message-ID: <nx7u.44.0011B42B@primenet.com>
Source record: 252912

Looking for any info on an old-timer, W5PLX, Bruce K. Frazier.
All I remember is the call and some old QTH's:
early 1960's in Benbrook (Fort Worth) TX
late 1960's in Phoenix AZ.
Yeah, it's a LOOOONG shot but what the heck!
Reply directly, thanks!

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

I HEARD A -SMALL WORLD- STORY LAST WEEK ... A NEW NOVICE HAD
HIS FIRST CONTACT WITH ITALY. IT WAS FROM THE TOWN HE WAS BORN
IN, (LEFT AT AGE 3), AND THE AMATEUR HAD BEEN TO SCHOOL WITH
HIS FATHER -- HE WAS SO UP IN THE AIR OVER THE COINCIDENCE --
WHAT A START TO HF WORKING. HE NEEDED A QSL ADDRESS AND I
HAPPENED TO HAVE AN INTERNATIONAL CALLBOOK WITH THAT INFO SO
WAS ABLE TO HELP AND SHARE IN HIS EXCITEMENT.

WHY NOT SHARE YOUR ANECDOTES WITH US AS WELL? DROP US A LINE.

ED.

FIRST ANNUAL ADRS WORLD-WIDE DIGITAL WPX CONTEST PART 2
4TH-5TH FEBRUARY 1995

EXCHANGE: A RST REPORT PLUS A PROGRESSIVE THREE-DIGIT CONTACT
NUMBER STARTING WITH 001 FOR THE FIRST CONTACT. (CONTINUE TO
FOUR DIGITS IF PAST 1000.) MULTI-TRANSMITTER STATIONS MAY USE
DIFFERENT NUMBERS FOR EACH BAND.

POINTS:
A. CONTACTS BETWEEN STATIONS ON DIFFERENT CONTINENTS ARE
WORTH THREE (3) POINTS ON 28, 21 AND 14 MHZ AND SIX (6)
POINTS ON 7, AND 3.5 MHZ.
B. CONTACTS BETWEEN STATIONS ON THE SAME CONTINENT BUT IN
DIFFERENT COUNTRIES ARE WORTH TWO (2) POINTS ON 28, 21
AND 14 MHZ AND FOUR (4) POINTS ON 7, AND 3.5 MHZ.

C. CONTACTS BETWEEN STATIONS IN THE SAME COUNTRY ARE WORTH ONE (1) POINT ON 28, 21 AND 14 MHZ, AND TWO (2) POINTS ON 7, AND 3.5 MHZ.

MULTIPLIER: MULTIPLIER IS THE NUMBER OF DIFFERENT PREFIXES WORKED. A PREFIX IS COUNTED ONLY ONCE REGARDLESS OF THE NUMBER OF TIMES THE SAME PREFIX IS WORKED. BO NABD MULTIPLIERS.

A. THE LETTER/NUMBER; COMBINATION WHICH FORMS THE FIRST PART OF THE AMATEUR CALL WILL BE CONSIDERED THE PREFIX.

EXAMPLES - N8, W8, WD8, Y22, Y23, HG1, HG19, WB2, WD200, KC2, KC200, OE2, OE25, U3, GB75, ZS66, NG84.

ANY DIFFERENCE IN THE NUMBERING, LETTERING, OR ORDER OF SAME SHALL CONSTITUTE A SEPARATE PREFIX. A STATION OPERATING FROM A DXCC COUNTRY DIFFERENT FROM THAT INDICATED BY ITS CALLSIGN IS REQUIRED TO SIGN PORTABLE, THE PORTABLE PREFIX MUST BE AN AUTHORIZED PREFIX FOR THE COUNTRY OR CALL AREA OF OPERATION. IN CASE OF PORTABLE OPERATION, THE PORTABLE DESIGNATOR WOULD THEN BECOME THE PREFIX.

EXAMPLE - AB5KD OPERATING FROM WAKE IS. WOULD SIGN AB5KD/KH9 OR KH9/AB5KD, AND KH6XXX OPERATING FROM OHIO WOULD NOT SIGN /KH8 WHICH IS NORMALLY ASSIGNES TO AMERICAN SAMOA, BUT COULD SIGN /W8, /N8, /K8, ETC. OR ANY OTHER PREFIX AUTHORIZED FOR USE IN THE U.S. 8TH CALL DISTRICT.

PORTABLE DESIGNATORS WITHOUT NUMBERS WILL BE ASSIGNED A ZERO (0) AFTER THE SECOND LETTER OF THE DESIGNATOR TO FORM THE PREFIX. WS7I/PA WOULD BECOME PA0. ALL CALLS WITHOUT NUMBERS WILL BE ASSIGNED A ZERO (0) AFTER THE FIRST TWO LETTERS TO FORM THE PREFIX.

EXAMPLE - XEFTJW WOULD COUNT AS XE0, RAEM WOULD COUNT AS RA0, ETC. MARITIME MOBILE, MOBILE, /A, /E, /J, /P OR INTERIM LICENCE CLASS IDENTIFIERS DO NOT COUNT AS PREFIXES.

SCORING:
1. SINGLE OPERATOR:
(A) ALL BAND SCORE: TOTAL QSO POINTS FROM ALL BANDS MULTIPLIED BY THE NUMBER OF DIFFERENT PREFIXES WORKED.
(B) SINGLE BAND SCORE: QSO POINTS ON THE BAND MULTIPLIED BY THE NUMBER OF DIFFERENT PREFIXES WORKED.
2. MULTI-OPERATOR STATIONS. SCORING IN BOTH THESE CATEGORIES IS THE SAME AS THE ALL BAND SCORING FOR SINGLE OPERATOR.
3. A STATION MAY BE WORKED ONCE ON EACH BAND FOR QSO CREDIT.

MORE NEXT WEEK

IPS WEEKLY REPORT
---

20 JANUARY - 26 JANUARY

DATE OF ISSUE: 27 JANUARY 1995

INDICES:

DATE 20 21 22 23 24 25 26
10CM 93 96 96 96 97 90 86
A 5 7 5 6 4 6 (5 ESTIMATED)
T 10 20 32 38 36 37 22

SOLAR ACTIVITY WAS VERY LOW 22ND JANUARY AND LOW FOR THE REST OF THE WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET TO UNSETTLED 20TH-24TH, AND QUIET 25TH-26TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES 20TH-22ND JANUARY, 15 TO 20 PER CENT ENHANCED 23RD-25TH, AND NEAR PREDICTED VALUES ON 26TH. THERE WERE POSSIBLE DEGRADED CONDITIONS ON 26TH DUE TO SPORADIC E AT 1-5UT.
FORECAST (27 JANUARY - 02 FEBRUARY)

SOLAR: 27-29 JAN: LOW
30 JAN - 2 FEB: VERY LOW

GEOMAGNETIC: 27-29 JAN: QUIET
30-31 JAN: ACTIVE
1 -2 FEB: QUIET TO UNSETTLED

IONOSPHERIC: PREDOMINANTLY NEAR PREDICTED MONTHLY VALUES; 30-31 JAN: SLIGHTLY BELOW PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

ARLD003 DX NEWS

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFORMATION PROVIDED BY TEDD, KB8NW, THE OPDX BULLETIN AND THE CONTEST CORRAL COLUMN FROM THE PAGES OF QST MAGAZINE. THANKS TO ALL.

PHILIPPINES. ACCORDING TO THE DX NEWSLETTER, 4E7 PREFIXES WERE TO START BEING ISSUED AS OF JANUARY 1, 1995. VS6VW REPORTED HEARING SM0CNS/4E7 ACTIVE ON 160 METERS.

KENYA. 5Z4FO HAS BEEN ON 75 AND 80 METERS WITH CW AND SSB BELOW 3800 KHZ. OPERATING HAS BEEN AS EARLY AS 2215Z AND AS LATE AS 0415. HE HAS ALSO BEEN WORKING 160 METERS, MAINLY WITH CW, ON 1832 KHZ AT 0100Z. QSL VIA KB4EKY. LISTEN FOR 5Z4DU ON 75 METER SSB AT ABOUT 0330Z. QSL VIA KG4X.

ZAIRE. JOE, G3MRC, IS SIGNING 9Q5MRC AND HAS BEEN OPERATING MOSTLY 30 AND 20 METER CW BETWEEN 1900 AND 2200Z. QSL VIA G3MRC. BJORN, LA9IY, IS ACTIVE AS 9Q5IY. HE HAS BEEN ON 18071 KHZ AT 1630Z. QSL DIRECT ONLY VIA LA1K.

SOUTH KOREA. HARRY, HL9HH, IS LOOKING FOR SOME HELP WITH LOW BAND WAS. HE NEEDS CT, NJ, NC, RI, SC AND VT ON BOTH 40 AND 80 METERS. ON 80 HE IS LOOKING FOR DE AND MD, AND ON 40 HE NEEDS MA, ME AND NH. LISTEN FOR HIM AROUND 3589 AND 7009 KHZ AFTER 1030Z.

PACIFIC DXPEDITION. ED, K8VIR, WILL BE DOING A LOT OF TRAVELING OVER THE NEXT SIX MONTHS. HE SHOULD START AMATEUR ACTIVITY FROM NEW CALEDONIA, FK. OTHER STOPS SHOULD INCLUDE WESTERN SAMOA AND TONGA. QSL VIA CBA.

CURACAO. JOHN, W1BIH, WILL BE ACTIVE AS PJ9JT UNTIL MID APRIL. TRY 3506 KHZ AT 0130Z AND 40 METER CW BETWEEN 0100 AND 0200Z, AND AGAIN AT 1130Z. CHECK 21279 KHZ AT 1430Z. QSL VIA W1AX.

CAMBODIA. MIKE, VS6WV, REPORTS THAT SANYI, XU7VK, HAS BEEN ON 1829 KHZ AT ABOUT 1435Z.

ZIMBABWE. BILL, Z21CS, CAN BE WORKED ON 18124 KHZ AROUND 1715Z. WHEN QSLING, DO NOT SEND IRCS OR GREEN STAMPS. BILL DOES REQUEST PACKETS OF FLOWER SEEDS FOR HIS XYL. QSL VIA BILL TAYLOR, BOX 264, KWEKWE, ZIMBABWE.

Coming events

February 4th-5th ADRS WW RTTY WPX contest
11th-12th EA WW RTTY Contest
26th Central Coast Field Day at Wyong

Paul H. Bock (phb@syseng1.melpar.esys.com) recently wrote in <phb.791239092@melpar>:

: Regarding the recent ARRL VHF Sweepstakes: There is a
: serious problem within FM18/19 with several well-known stations
: capable of high-power operation. This problem manifests itself
: in two ways, which I will cover in turn.

: I. Excessive power for conditions

: By running maximum power output at all times, stations with
: an otherwise "clean" output are creating severe intermodulation
: problems for other stations within FM19. While it is all well
: and good to say "it's a receiver problem," that answer reflects
: an inconsiderate, if not downright arrogant, attitude. *Most* of
: the two-meter SSB operators who tried out the contest are using
: commercially-built equipment; they are stuck with what they have,

Remember a contest is only a technical TEST of your equipment. If you have ever contested on a major metropolitan mountain top, with all the pager and commercial intermod getting into your unprotected wide band receiver, you learn quickly to use a simple band pass cavity tuned to your frequency. This hundred dollar device will protect your low noise pre-amp from out of band mixing. The in-band intermod also goes away!

It really is your receiver...make it work for you. Add the necessary front end protection.

: II. Trashy Signals

: For the benefit of those who didn't notice, there were some
: high-power signals present in the vicinity of 144.2 MHz during the
: contest which created widespread splatter and spurious signals,
: in one case actually affecting an area FM repeater nearly a MHz
: away in input frequency.

This is to be expected. Were you looking at these signals with a spectrum analizer or using a receiver that allowed these high power signals to mix in your front-end? Repeaters suffer the same problems in reguards to front end overload. Maybe the high power contester was at the same location as the repeater. Normally this repeater gets by with out the added cavities needed to keep a high power signal from mixing in its receiver.

I bet the high power stations were not complaining of intermod. They had the necessary filtering and pass bottles to protect their receivers. They know it is futile to run high power if they can't receive the weak signals.

In my humble opinion, I think the AmSoft posting was appropriate.
It told me a new version of the product was available and where
to get more information. It was brief, didn't mention prices, and
was posted ONLY to appropriate (ham radio) groups. This is useful
information.

A few facts:

1. Years ago the Internet backbone was government funded and was only
supposed to be used for non-commercial purposes. That changed about
3 or 4 years ago. It is now commercial with no restrictions on
commercial use. I was the Internet contact for our site at the time
so I got all the official info and saw the significant jump in the
monthly bill.

2. Netiquite (sp?) is not law or a contract between network service
providers and users. It is only generally accepted guidelines
of the culture of the newsgroups. There are many newsgroups dedicated
to particular commercial products used for communication between
manufacturers and customers.

3. There are only a few big companies in the ham radio market. The
transceiver manufacturers, AEA, MFJ, and very few others are big
companies that can afford full page ads. Most of the others are
just one person at-home "basement" operations persued nights and
weekends in addition to regular full time jobs. Don't be fooled
by the fancy names like "XYZ Technologies" or "XYZ Research".
I know several people personally who fit into this category. Most
people feel more comfortable dealing with a big company instead
of a basement operation so it really is necessary to give the

the impression of being bigger.
We should thank and encourage these people for bringing us interesting products that larger companies wouldn't want to be bothered with due to tiny market and low margins.

If some one is truly abusive of the communication channel we should scold him and even ask the site administrator to revoke access. However this was not terrible abuse.

73,
John WB2OSZ

1240. Re: Mobile installation: why 2 fuses?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-31 01:17:09 UTC

Message-ID: <3gk32l$3ov7@blue.weeg.uiowa.edu>
Source record: 252880

The negative battery and alternator leadleads on your car are grounded to the engine block. The block is then connected to the chassis by a grounding strap. If that strap corrodes or breaks. the current will seek an alternate path. That is what has caused emergency brake cables, throttle cables, etc. to burn through.

If the negative lead to a radio is connected directly to the battery, the same circumstance could be created. In the day of the plastic dashboard and console the likely path would be through the coax shield.

The better installation is to connect the radio negative lead to the nearest chassis ground, unfused. The only path from battery to ground through the radio then is via the fused positive lead.

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin, VK2PFQ.

This week we have for you a press release from the Shadow Minister for Communications and the Arts, Senator Richard Alston, but first a few things on our wish list.

As was reported before Christmas, our downstairs tenant left us after many years....It was a case of outgrowing the premises and Parramatta City Council's advice that further expansion at 109 Wigram Street would not be approved. Anyhow, we now have an empty office with 2 lock up car spaces and 4 other off street car spaces or an empty office with 4 off street parking spaces. We are informed by the agent that this is worth a rental of around $20,000.00... which is a great deal more than we were getting beforehand. Indeed, reference to the lease document showed that allowable increases such as C.P.I., rates and water rates had not been passed on to the tenants since about 1991. One can only attribute this to involvement in other matters....perhaps the less said the better.

The solution to any further "oversights" is that an agent will be employed to supervise these matters thereby looking after our interests. The fees that we will incur are worth the extra income which will be obtained. But before this can happen, we need to spend a little money. To begin with the place needs painting. Now here is the opportunity for all those who knocked the last paint job and the cost of it (I recall the A-Team got the blame)...Well, now its time for the knockers to come to the aid of the Institute.

We require either a Contractor or some willing volunteers. However before this we will need the services of an electrician. The job.. ..simple. Install three new fluorescent fittings in the office area and re-install the ones in the office area into the lock-up garage area. If anyone can fix a Roll-aDoor lock or supply a new one, we would like to hear from you as well. When all this is completed, we will need a carpet layer and of course some cheap carpet. So... . In case you missed our wish list, we need.....An Electrician, a Roll-a-Door fixer, some painters, carpet suppliers and layers....and when do we want 'em?.....as soon as possible, next weekend might be a good time for a working bee....i.e. Ready to rent by 6th February.... So, if the job description fits YOU... Give me a call on 626-9288. If we don't get any volunteers then....we either do it ourselves or we spend some money and get someone else to perform the

tasks. It's really up to you. You know Aub. Topp our Divisional Librarian for many years has just finished painting his house.....I wonder if.....

Todays Trash and Treasure start time has been changed. That is, it used to start at 2.00p.m.....now it starts at 1.00p.m.....and nobody noticed until Friday when we got a couple of calls at the office. Reason for the change....You can sell hot dogs better at 1.00 p.m. than you can at 2.00 p.m. which of course reminds me that there will be cool drinks, tea and coffee for sale on the day. You'll recall that on the occasion of the last Trash & Treasure I asked for someone to make a Donation of a Refrigerator for the Parramatta Office...well we got an offer from Michael VK2MJ of such a piece of equipment. Thanks Michael. Actually we really should thank Michael's wife...If she had not thought to replace the family refrigerator...We would still be looking for a 'frig.

And now to that Press Release from the Shadow Minister. It's headed up....

"COALITION OPPOSES AMATEUR RADIO FEES INCREASE.... and I quote...

The recent decision of the Spectrum Management Agency to increase amateur radio licence fees, approximately doubling them in many cases, is opposed by the Coalition, said the Shadow Minister for Communications and the Arts, Senator Richard Alston today.

It is difficult to avoid the conclusion that amateur operators have the misfortune to be disciplined, individuallylicensed service, and therefore an easy target for revenueraising by a profligate Government asking them to pick up the tab for a clumsy exercise in spectrum rationalisation.

The Coalition recognises the contribution of the amateur radio service to the community through its various activities. The assistance provided by amateur radio operators in emergency situations and the support they provide to other community organisations has been a consistent part of the amateur ethos for many decades.

This contribution has been recognised in the amateur radio fee structure in the past. Indeed, the objectives of the new Radiocommunications Act which took effect in 1992 will include "adequate provision for use by public or community services" and "a responsive and flexible approach to meeting the needs of users".

Coalition inquiries indicate that these proposals have been put forward by the Government without proper consultation or justification. In particular, the SMA have not adequately explained how it has arrived at the proposed fee levels, to what extent the community benefits of amateur radio have been accounted for, and how this was accomplished.

Senator Alston said, "I am seeking from the SMA its reasons for any increase, let alone one of the proposed magnitude. The amateur radio community can rest assured that the Coalition will put their interests, and the valuable service they provide to all Australians, ahead of the Government's preference for using them as an easy source of revenue".....End of quote.

Now keep those letters flowing. Again this week I was made aware of the fact that some of Federal Politicians still, as yet, have not received ANY letters. As you will agree, this is most disturbing. I said last week and I'll say it again..... How does one convince people to save themselves? The more people who write....the more pressure we put on the Government. Again, don't write to the S.M.A. it's only the politicians who can change this decision. Sheer weight of members will win the day.

The VK2 Division submission to the Minister has been completed and will be forwarded to the Minister first thing Monday morning, along with copies to all Members of the Parliamentary Communications and Arts Committee. My thanks go once more to PETER JENSEN VK2AQJ as chairman and his able committee of DAVE HORSFALL VK2KFU, CESAR MIRANDA VK2TCM and RICHARD MURNANE VK2SKY, for the work that they put into this submission. Since last Sunday they met on four occasions. The result, a comprehensive submission which hopefully will persuade some of our Politicians to change their minds. It certainly will not be for the want of trying by this Division. Knockers please note... We were the first Division to put it on the air...Sunday 18th December....and personally, I have John Robinson VK2XY to thank for that!!! Credit where credit is due!

Finally another word of thanks and this goes to Leith Martin VK2EA. Leith was mixed up with one of those lost army Ducks back in the 1955 floods I told you about last week. You'll recall I told you my father VK2YC had been called upon to find these Ducks. I have it now on good authority that these ducks were indeed not lost nor indeed were they ever lost.....The blokes in them knew where they where. It was just that the army didn't know where they were!!!!! Leith had written an account of his experiences, back in 1992. He has been good enough to supply us with a copy for our library. You can borrow it when I have read it. In the meantime.....

See you next week.

WIA examinations

The next examinations conducted by the NSW Division of the WIA will be held at Amateur Radio House, Parramatta, 109 Wigram Street on Sunday 19th February 1995 at 1.00 pm. Applications close on Thursday 9th February.

Band plans, Beacons and Bad Habits

Now that the summer VHF-UHF DX season is here, it's timely to remind operators of why there are band plans.

Basically, band plan arrangements help avoid mutual interference problems between otherwise incompatible modes and operations. The 1995 Call Book has full details for all the Australian bands, HF through SHF. On each VHF band, a segment is set aside by gentlemen's agreement for narrow band modes and weak signal operation. Other segments are set aside for FM and repeaters, packet radio etc.

On the two metre band, the segment for narrow band modes is from 144.000 to 144.600 MHz. Within this 600 KHz segment, the first 100 KHz -- from 144.00 to 144.100 MHz -- is for CW only operation. The segment between 144.100 and 144.600 MHz, is for CW, SSB and other narrow band modes. Within this segment is a sub-segment exclusively for beacons, between 144.400 and 144.600 MHz. There is, in addition, a "national SSB calling frequency" of 144.100 MHz. All this is part of a long-standing gentlemen's agreement that is adhered to nation-wide.

Unfortunately, a growing number of wideband FM signals is appearing below 144.600 MHz, transgressing the band plan arrangement. FM stations have been heard using the national SSB calling frequency (144.100 MHz) and on other frequencies below 144.600 MHz.

Two metre operators who use the segment below 144.600 MHz, particularly those in pursuit of weak signal and long distance work, find FM stations who operate on top of 2m beacon frequencies particularly annoying. Just because the VK5 2m beacon cannot be heard by an FM station in Sydney is not a good reason for that station to operate in the beacon segment or a frequency adjacent to it.

Beacons serve a number of purposes: among other things, to provide an effective indicator of propagation "openings", and to provide a constant reference signal for operators in the beacon's "local" area. At considerable distances, a beacon's weak "scatter" signal provides a means of checking or measuring station system performance.

It's just as important to have beacon frequencies free of interference when a band's NOT open as when it is open.

Many volunteers have spent a lot of time and money (often, WIA members' money) constructing, installing and maintaining the twenty four 2m beacons currently operating in Australia.

FM stations operating in the beacon segment completely negate the efforts of these people. In recent years, for example, there were occasions when FM operators in Sydney were actually having contacts on top of the Adelaide beacon frequency, when the beacon was clearly audible at the time! These stations declined to move, when asked.

There would be certain complaint if SSB or CW operators moved into the channelised FM/repeater segments and operated with impunity. Many such operators run considerable power to large antenna arrays and thus have high radiated power.

Courtesy and respect for the band plan, which preserves the rights of operators who pursue differing modes and operating practices, needs to be observed for the sake of peaceful coexistence.

The national 2m band plan expressly reserves the region below 144.600 to 145.700 is for general use, ALL modes.

Be a "good neighbour". FM is not compatible with narrow band modes and weak signal operation, even though DX may be worked (in the appropriate band segment) when conditions are really good.

Thanks to the NSW VHF-to-SHF DX Group for details.

WICEN News

The holiday period is now well and truly over, and for a change there were no activations this time. Various regional nets and meetings have started, and Hunter advise that their first meeting for the year will be on 20th February at the Emergency Operations Centre, on the corner of Elizabeth and Hannell Streets, Carrington, starting at 1900, and thereafter on the third Monday of each month.

The major event next month is the Central Coast Amateur Radio Club Field Day, on Sunday 26th February. As usual there will be a WICEN stall next to the Caravan, and people in uniform are requested to help staff it for an hour or two from 1000 to about 1500; please contact Alan VK2YYJ if you can help.

The major events in March include the "RTA Big NSW Bike Ride" from the 4th to the 11th of March, and the annual Bungonia Cave Rescue on the weekend of 18-19th March; there will be further information in a later broadcast.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Amateurs assist earthquake relief in Japan

More than 200 Japanese amateurs are providing emergency communications in Kobe, Japan following the earthquake on 16th January that killed more than 5,000 people, and left tens of thousands homeless.

According to the Japan Amateur Radio League, amateur radio is being used to link relief centres, and to exchange information about road conditions and traffic, the health, welfare, and whereabouts of residents, and the availability of food and water.

The J.A.R.L. and the Japan Radio and Equipment Industry Association (JAIA) are conducting the effort on the request of the Ministry of Post and Telecommunications. JAIA member companies supplied 200 handheld 70cm and 12cm band receivers for the operation.

JA3YRL in Kobe serves as communications coordinator while JA3RL, the JARL's Osaka office is monitoring the activity.

At present 400 of the 600 relief centres, with a total of 240,000 evacuees, are not yet being served by this communication system, and the JARL is considering equipping at least half of them with amateur radio stations.

from ARRL Bulletin 6 (thanks to Peter Vernon VK2JPJ for sending us this item.

1995 BCOP course

The Broadcast Operator's Certificate of Proficiency (BOCP) course will be run in 1995, for NSW, at Sydney Institute of Technology, Ultimo campus. See 1995 Handbook.

The aim of the course is to provide the technical skills to run and maintain a broadcast radio station. This is a post-trade course.

Enrolments are on Friday 3rd February 1995 and Monday 6th February 1995. Telephone enquiries to (02) 217 3346.

--Brian Clarke VK2GCE

IONOSPHERIC: PREDOMINANTLY NEAR PREDICTED MONTHLY VALUES; 30-
31 JAN: SLIGHTLY BELOW PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

The 1995 Central Coast Field Day
for
Radio Amateurs and Enthusiasts
Computer and Electronic Hobbyists

Sunday 26 February, 1995
at Wyong Racecourse
Gates Open 8.30 am

* Truck loads of pre-loved equipment at giveaway prices in the flea market and disposals area.

* Entrance fee only $8.00 ... Seniors and pensioner concession $5.00. Children under 12 free.

* See all major Amateur Radio equipment suppliers together under one roof with many dealers displaying

* Interesting technical lectures

* Packet Radio - Computerised Communications Displays

* Radio fox hunts

* Amateur television transmission displays

* Free off-street parking

* Free sightseeing bus tour of the Central Coast for the family

* Free entry tickets to the Australian Reptile Park

* Bring your picnic lunch or buy hot and cold food and drink from the stalls in the ground

DON'T MISS THE BIGGEST FIELD DAY IN THE SOUTHERN HEMISPHERE

Presented since 1957 by THE CENTRAL COAST AMATEUR RADIO CLUB INC.
For further information write to The CCARC, PO Box 252, Gosford 2250
Phone (043) 40 2500

From the Orange Amateur Radio Club

Members and visitors are invited to the club's first meeting this year.

The guest speaker will be Ted Baker VK2ABW whi will recall some of his very interesting experiences with World War II radar equipment in the New Zealand Army.

The date is Friday 3rd Febraury

The time is 7.30 pm

The place is the Cultural Centre in Sale Street, Orange

Visitors are always welcome at the Orange Club, so come along for an interesting talk followed by a friendly chat over tea and biscuits.

Bruce Carroll VK2DEQ
Secretary

Mid South Coast Amateur Radio Club

Mid South Coast Amateur Radio Club Inc. will be holding the Annual General Meeting next Saturday, 4th February. Our location is the "H Ranch", Little Forest Road, Milton (turn inland from the Pacific Highway 3 km north of historic Milton township and follow the "H Ranch" signs.

Arrivals are from 10.30 onwards. Visitors and families are most welcome. Please bring your picnic or barbecue lunch.

Our meeting place is a spectacular one with great mountain and ocean views and the South Coast is justly proud of its reputation for hospitality. We look forward to seeing you there.

from Stan VK2EL, Club Secretary

Do you want to have your own Amateur Radio licence?

The Chifley Amateur Radio Club is conducting classes for the amateur radio licence.

They will cover Morse Code, Theory, and regulations, for the amateur radio licence.

Classes start on Wednesday 8th February 1995.

The classes are on every Wednesday night at 7-30 pm.

The address is:
Good Shepherd School Hall, Hyatts Road, Plumpton.
100 metres south of Jersey Road. Opposite the new shopping centre building (Plumpton Markets).

Postal address:
Chifley Amateur Radio Club
Post Box 280 Mount Druitt 2770

Telephone number: 671-6992 or 637-2226

Once you have your Amateur radio licence, we will then show you how to connect your home computer to your radio and talk to the world using your computer.

Using any one of the many DIGITAL modes is a fascinating way to use your radio and computer.

Come along to our club rooms any Saturday afternoon and have a talk to any of any of our members for more information or come along on Wednesday night 8th Feb at 7-30 pm.

Visitors are always welcome.

Bi-Monthly General Meeting

On 11th February the Chifley Amateur Radio Club will be holding its bi-monthly general meeting, at the club rooms starting at 1-30 pm.

At this meeting the members are able to ask the committee questions on operation of the club. At these meetings the committee ask the members for feedback on various topics in relation to the club.

The Chifley Amateur Radio Club holds meetings EVERY Saturday afternoon from 1-30 pm to 4-00 pm.

These meetings are held for the members and their friends to come along and talk about any amateur radio, computer, related subject, or just to have a cuppa and chat with some friends.

So come along any Saturday afternoon and meet some of the members of the Chifley Amateur Radio Club. You will be welcome.

Classes start on 8th February at 7-30 pm
General meeting on 11th February at 1-30 pm

from the
Chifley Amateur Radio Club Inc.
Publicity Officer: Ray Sparks VK2FKO

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Short Wave Listeners ...

Please note that the Divisional Office will be closed this month; however, you can still call us, as the phone has been redirected to a duty Councillor.

Divisional Office reopens. . . . . sometime in February (TBA)
WIA Federal convention . . . . . .3 February
Enrolments for Broadcast Operator's Certificate of Proficiency
course Sydney Institute of Technology, Ultimo. . .3 & 6 February
Mid South Coast ARC AGM. . . . . .4 February

Hank Oredson (hanko@wv.mentorg.com) wrote:

: I'm very curious where you discovered the information that indicates
: it "... contrary to Internet's policy ...". As far as I know, there
: IS no such entity as "Internet" to have a policy. Could you be a bit
: more specific where you located this policy information? Any sort of
: reference will do: ftp, email, http, whatever. I'd like to review
: the policy you are talking about before making any further comments.

Any of a number of books at your local library or bookstore can fill you in on the history and evolution of what we now call the "Internet". It's original purpose was to connect Universities and other educational institutions for educational purposes. Major advances in this regard were made by the National Science Foundation. Commercial participation was once excluded or severely restricted. The intended purpose of the "creators" was educational advancement (much of it at taxpayers expense), not providing commercial enterprises with new ways to make money. Commercial connections are now common, the limitations on use much more flexible. There are no laws that I know of which prohibit advertising on the net, however the vast majority of commercial enterprises connected to the net honor the traditional "ban" on overt advertising and limit their use to their own research and development purposes and for business communications. They understand and respect the original purpose and intent of what has become the "Internet", and respect the wishes of the majority of users, as well as the wishes of those who have made "Internet" possible.

Virtually every major business from IBM to Intel to General Motors has Internet access. When was the last time you saw a commercial here from one of them?

Again, there are dozens of books that discuss Internet history and purpose. I've not done it, but I imagine you could also come up with lots of similar info if you do a Gopher search on some key relevant topics.

Feel free to let me know what you discover in your research.

Suggest you borrow a few different makes of keyboards from friends and try them. The signal may be
entering through the keyboard itself. Particularly in this age when most of them operate on a capacitive
effect instead of using old fashioned metal contanct switches. Some of the standard keyboards you get
with systems cost less than $10 wholesale, so you can imagine how value-engineered those ones are.
See if you can borrow a high end keyboard for a while. Since they range in price from $10 to $130 you
know there has to be some differences!

With the proliferation of all these new nuts and bolts advertizers
sliping their wares into our .amateur. news groups, we may wish to
consider the impact and move toward creating an other group for this
express purpose.

I will start off by recommending rec.radio.marketplace

This would be a good group to read for the latest pointers to WEB pages,
the latest way to make-money-fast , all the latest Newsletters offering
all kinds of radio related goodies.

Please do not confuse this proposed marketplace group with rec.radio.swap

I would hope the rec.radio.amateur namespace gurus will step forward and
help lead this discussion toward the proper creation of a new news group.

Thank You,

Bob

Our .amateur. newsgroups are not the place for salesmen and their well known
attoerneys to intimidate our readers.

>I'm suspecting this may be the "memory effect" Ni-Cd batteries can have,
>if they are not allowed to drain empty before recharging.

You know, if it is the memory effect, if it comes up after incomplete
discharge and subsequent charge.

>I seem to recall a circuit that could be built to "zap" or "condition"
>Ni-Cd batteries which were in this state, so that they would take a
>full charge once again.

Steve,

be careful with circuits that do any zapping on nicads, because
some may actually require zapping (in case of internal shorts)
but others will take very badly to such a treatment.

To cure the memory effect, connect a resistor (lamp) across the
cells, that will drain them within a few hours. If they discharge
seemingly properly, but only with 80% of the design voltage,
than there is most likely a memory effect present. (there is
however a chance that one of the cells is dead).

When the voltage eventually breakes down (*never* let it go
right down to zero) you charge them fully and the memory effect will
be gone (may be two or three cycles are needed.).

good luck, Moritz DL5UH

>materials than money) for a omni-directional antenna? The connector going
>into my scanner is a male BNC.

Yes, you certainly can make a good antenna from just some copper plumbing pipe and fittings. The antenna design is called a J-pole, and if you'll ask for the plans in the rec.radio.amateur.antenna group, someone will Email you the ASCII art, or you can look it up in the ARRL Handbook or Antenna Book (available at many libraries). It's a simple antenna that's 54 inches tall for 2 meters. For the frequency you need to receive, it will be about 51 inches tall.

You can scale the dimensions of any antenna by multiplying the dimensions listed at frequency X by X/Y where Y is the new frequency. Example, a 54 inch element at 144 MHz will be 54*144/152=51.16 inches at a frequency of 152 MHz.

>Second question:
> Once I have a good antenna, could I use a tubular aluminum pool
>brush handle for a mast (~20' long)?

Sure can. If you build the J-pole with a "tail", it can be made to be a slip fit over your brush handle. To do this, use a Tee fitting in place of one of the 90 degree elbows in the J-pole design.

Now you might actually want to build a yagi beam antenna instead. This will have more gain than just a vertical, but you'll have to know what direction to point it. That shouldn't be a problem in your application. You can make a beam from a piece of 2x2 wood and some welding rods for elements. Check out the ARRL Handbook or Antenna Book for plans. Scale

the dimensions as mentioned above for the frequency of interest. Clamp it to your mast with a U-bolt.

A#xx and a#x aren't US-assigned call prefixes (a# belongs to someone else
for each #, and I don't have the list here to prove it...)

I'm looking to buy a solid state tube replacement made by Sartori Associates back a number of years ago.

The solid state tube type is an SBA6 which replaces the 6BA6 in an R-4C Drake receiver.

All of the other tubes have been replaced with solid state subs except this one, so I would like to purchase the SBA6 to complete the receiver.

If you have the SBA6 for sale, you can either e-mail directly or leave a message here. Thanks!

Message-ID: <3glmon$7dh@jericho.mc.com>
Source record: 252916

In article dp@ixnews3.ix.netcom.com, brannick@ix.netcom.com (Bill Brannick) writes:
-->I have recently purchased an Ameritron 811H amplifier primarily to help
-->my sigs on 40 and 80 meter. Works well on SSB and CW.
-->
-->However I also like to work the digital modes (RTTY, Amtor, Pactor)
-->but have found that if a run the amp at all, I am getting RF into the
-->Computer keyboard, a recent Gateway product and to some degree into the
-->AEA 232MBX, to the extent that the green "STA" lamp (normally
-->extinguished in these modes) glows brightly as I increase power. These
-->problems only exist on 40 and 80. The dipole I use for these bands is
-->probably 40 feet away (straight line distance)

One common problem of the PK232 is feedback into the rig via
the AFSK wire. I had this problem when using AFSK (SSB)
for RTTY. The AFSK OUT of the TNC to the radio was he
culprit

If you can use FSK for digitil, cut the wire (I cant
remember the right color now) and use the FSK output of
the TNC-->Radio instead.

Unfortunately all radios do not provide FSK inputs.

Although this may not be the problem since you dont
have the problem with the amp off, although it might
be exasperated by the additional RF floating around.

Using high power, I also found it necessary to have all
the equipment gounded together. I use a AL811 amp also
(not the H version though).

1278. Marine VHF Communications

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-31 18:02:03 UTC
From: bl261@FreeNet.Carleton.CA
Message-ID: <D3A7FF.35L@freenet.carleton.ca>
Source record: 252921

Hello:

I am part of a team conducting a Communications Review for the Canadian Olympic (training) Regatta Kingston a.k.a. CORK. We are looking at all aspects of comms used in support of day-to-day regatta operations, and I am hoping that sailors and communicators of all types reading this might be able to offer any suggestions.

CORK currently relies on Marine VHF shipboard and hand-held transceivers for Race Committee comms, and ship-to-shore regatta support comms, to support as many as six separate Race Committees and race courses at any one time. Additionally, Citizens'-Band base station and hand-helds are used by Regatta Security personnel, and some borrowed VHF base stations and HTs (hand-helds) are also used by Regatta organizers onshore.

The VHF Marine HTs have been purchased over a long period of time, and the batteries (NiCad) probably need to be replaced; finding a battery source for a variety of different Marine VHF HTs has been a bit of a problem. CORK owns and uses the following makes/models of Marine VHF HTs:

MARINE 5504 / LORAD Black Hawk / LORAD XR100 / SITEX HH-150

CORK also uses a number of base station-type Marine VHF sets, commonly called "tackle-boxes", as they open like a tackle-box, have removable lids, have 1 watt/25 watt power output, and do not have both US & international capability.

Replacement batteries for most Amateur (HAM) Radio HTs are easy enough to find; replacements for Marine VHF units are somewhat more difficult to find.

I have already seen/read the articles in "Practical Sailor", for September 93 (Vol 19, Nbr 17/18) and October 15th 93 (Vol 19, Nbr 20), regarding hand-held VHFs, and February 1st (Vol 20, Nbr 3) and March 1st (Vol 20, Nbr 5) regarding high-end VHF radios and VHF radio tests.

Any other suggestions or ideas from sailors and communicators alike would be greatly appreciated. Deadline for any suggestions is NLT February 15th 1995, as we must submit short and long-term recomendations to the CORK Board of Directors by March 1st.

In Advance, Thanx!

the prefixes A1A-A9Z are assigned, but don't those calls have another number, i.e., A1#xxx? That would leave American calls A1xx-A0xx open. From the prefix list, it would seem that the ITU would allow America to assign the prefixes AAA-ALZ, so I could have my A0xx and someone could get AAA0AAA.

Anybody know?

Here's some more fuel for the K1MAN fire..... 73 Joe- N4NAS
Packet Repost....:
Date/time : 27-Jan 21:55
Title : Re: K1MAN's "Broadcast" MISconduct
From: WR9B@WR9B.#WCIL.IL.USA.NA

>BROADCAST: To send (addresses, lectures, messages, music, speeches, etc.)
from a central station to receiving points within specific range by
radiotelegraphy or radiotelephony. --Funk and Wagnalls
>
> Something has to be done. In case you haven't heard about the
current source of contention on 20 and 75 meters, K1MAN continues to
operate SSB bulletin stations without regard to ongoing communication
already established occupied, he should move at least 2 kHz away and
repeat the process, eventually finding an open, unused frequency where he
can begin his broadcasting. That procedure holds true for other stations
desiring the use of "their" specific, traditional frequency of operation
as well. If -
K1MAN already occupies that frequency, they should move at least 2 kHz to
find one that's open. So, what's the problem? Our transmitters aren't
"rockbound" (crystal controlled), and we also possess the mental
flexibility to compromise.
>
> This whole concept of broadcasting by hams on our ham bands needs to
be addressed. What about W1AW? Should the ARRL, of which, by the way, I
am a proud member, curtail W1AW broadcasts since it's transmissions are
initiated without regard to frequency occupancy, or should it, since it is
the headquarter-station of an organization that represents a large number
of hams, be allowed to continue transmitting in that manner? I vote for
the latter. What about future bulletin broadcasters? Are there eno-
ugh wannabe
(TEXT DELETED)

73 Chip WB9EBE @ W9ZMR.EN52VA.IL.USA.NOAM

Whoa!!!!!

Hang on a sec, there Chip, first you say that K1MAN should not (and I
agree) start transmitting on a frequency that is in use, and then you turn
around and say that its ok for the ARRL to do it????? Sorry, but the ARRL
is a MUCH bigger offender as far as transmitting on a "busy" frequency
than K1MAN will ever be.... You can't have it both ways, Chip, if it is
wrong, then it is wrong no matter WHO does it...

73,
Larry, WR9B @ WR9B.#WCIL.IL.USA.NA

I believe you are correct about the A1#xxx, but I don't think the US can
issue A#xxx because we don't have AAA-AZZ. If we did, like KAA-KZZ,
NAA-NZZ, and WAA-WZZ, we could. Someone else has AMA-AZZ (or several
countries have parts of it...), making it impossible for us to assign
A#xxx. I think this comes more from the fact that this prefix list is
not just for amateur stations, but also other types of stations
(commercial, government, etc.) (Notice all US radio stations have calls
starting with K or W.)

As always, this is just my opinion, based on a little fact, and it could
be completely wrong...

Must be that AT&T phone. Better get a Panasonic... :=)

Seriously, though. From your description it does indeed sound like
interference from a nearby transmitter. It could be ham, CB, cellular
phone, taxi radio, whatever. Your best bet is to try to understand
some of the voice. Even if you can't get a callsign, the type of
jargon used would give a clue as to which radio service is involved.

the prefixes A1A-A9Z are assigned, but don't those calls have another number, i.e., A1#xxx? That would leave American calls A1xx-A0xx open.

These still belong by ITU assignment to those other countries. They are not valid amateur calls, but they would be perfectly valid for broadcast or navigation stations, e.g. A4BC would be a perfectly valid call sign for shortwave broadcast station in Oman.

From the prefix list, it would seem that the ITU would allow America to assign the prefixes AAA-ALZ, so I could have my A0xx and someone could get AAA0AAA.

AAA0xxx belongs to another service in the US, namely Army MARS, I believe.

ARLX010 Bill Grenfell, W4GF, SK

Bill Grenfell, W4GF, SK

William S. Grenfell, W4GF, a former chief of the FCC's Amateur Branch and former chief of the Amateur Service Section, died January 27, 1995, in Vienna, Virginia. He was 82 years old.

Grenfell worked for the FCC from 1940 until retiring in 1971, except for several years in the US Navy during World War II. After graduating from Oregon State College with a BS degree in electrical engineering in 1935, he worked for the State of Oregon until joining the FCC's Seattle office as an assistant monitoring officer in the FCC Radio Intelligence Division in 1940.

Following the war, Grenfell returned to the FCC as a radio engineer. In 1952 he became chief of the Amateur Branch and Amateur Service Section; from 1962 until 1966 he was chief of the FCC Rules and Standards Branch of the Amateur and Citizens Division; and he was chief of the Rules and Legal Branch of the Amateur and Citizens Division from 1966 until retiring in 1971.

An FCC news release announcing Bill Grenfell's retirement called him ''a practicing (amateur) operator for almost 41 years'' (he was first licensed in high school) and cited his contesting achievements. After retiring he wrote columns for the Washington, DC-area Amateur Radio publication ''Auto-Call'' and also for WorldRadio.

W4GF's memberships and awards are nearly too numerous to list. He was an ARRL life member, a Quarter Century Wireless Association life member, a fellow of the Radio Club of America, and a member and former president of the Potomac Valley Radio Club. He was a licensed pilot and regularly flew his plane to the Dayton HamVention.

Bill Grenfell died after an illness of several years. His wife,
Bernece, died earlier, and he leaves no close survivors.

ARRL Bulletin 10 ARLB010
From ARRL Headquarters
Newington CT January 31, 1995
To all radio amateurs

SB QST ARL ARLB010
ARLB010 Renewal hearing ordered

Renewal hearing ordered

The FCC has designated for a hearing the application for renewal of an Amateur Extra Class operator's license and station license.

Herbert L. Schoenbohm, KV4FZ, of Kingshill, US Virgin Islands, has applied for renewal of his operator and station licensees. The FCC designated a hearing, saying that ''it appears that Mr. Schoenbohm lacks the requisite qualifications for a renewal'' of his licenses.

In 1992 Schoenbohm was convicted in US District Court of the fraudulent use of a counterfeit long-distance telephone access device, and was sentenced to a (suspended) two-month prison term, as well as placed on two years' probation.

The FCC said that Schoenbohm's conviction ''is relevant to evaluating the likelihood that he will comply with the Commission's Rules as a licensee in the amateur service.''

The FCC said issues to be addressed at a hearing would be Schoenbohm's qualification to renew his amateur licenses and whether such renewal ''would serve the public interest, convenience and necessity.''

The burden of proof ''shall be upon (Schoenbohm) as to all issues,'' the FCC said.

>
> ... Hank
>
I agree that people shouldn't throw the "policy" terminology around,
especially because the attarction of the NET is that there are really no
hard and fast rules....things happen or do not happen as a result of
"gentlemens' agreements"

Use of the NET for commercial purposes is tempting, but my opinion is
that the best thing to do is for "advertisers" to voluntarily restriuct
their postings to areas set up for it. Otherwise, can you imagine what
some "enterprising" commercial entities would do to these USENET groups?

I use the word "enterprising" in quotes...these people are the same ones
who believe that they are "clever" when they park in a handicapped
parking space and get away with it, and that the rest of us "saps" were
not thinking or not willing to take a risk. We could legislate against
boorish behavior on the NET, but lets hope it never goes that far.

And in case you are wondering, Hank, I'm not some fresh-faced college
kid cooped up in my dorm room pecking away at my computer
at 2:30am philosophizing about how the world SHOULD be (not that there
is anything wrong with that). I'm a professional marketer with a real
soft spot for advertisng and business.

1304. Repeater Directory online/CD-ROM?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-31 23:23:32 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanD3AMB9.Gv5@netcom.com>
Source record: 252797

Is there a possibility that the ARRL _Repeater Directory_ can be found somewhere on the 'Net, or on CD-ROM? Is the 1994-1995 edition the most current, or is there a 1995-1996 version in the works?

The reason that I ask, is the abundance of repeaters on all bands in SoCal. It would be nice to be able to sort by band and frequency for reference.

Jim

1305. 440 Repeaters in SoCal

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-31 23:31:05 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanD3AMnt.Hs7@netcom.com>
Source record: 252798

I've been "off the planet" so to speak, for the last few years, and am interested in upgrading my station.

There seems to be quite a bit of FM activity on the 70 cm band here in SoCal, but I notice that many, if not most, of the repeaters are listed as "closed" in the _Repeater Directory_ from ARRL.

I certainly don't want to minimize the costs involved with running a repeater, or to challenge, in any way, the right of individuals or clubs to do so. I'm just curious, since the trend is opposite that on 2m.

Just trying to justify the cost of a new rig.

In reference to NiCd memory effect:

I don't know much about electronic trouble-shooting, but I know there's a good product on the market: battery conditioners.

They function as a conventional battery charger, but they also have a circuit that completely drains the battery before it begins the charge cycle. A lot of laptop computer users employ them to keep their battery packs fresh. They cost around $100, but they might be worth the price if you use your radio a lot.

Don't know any calls, but two of the people who died with
David Koresh in the Branch Davidian compound at Waco were
hams.

Also, no name or call, but the guy who shot up the post office
where he worked in Oklahoma several years back was an extra
class ham. Seem to recall that the police found his house
full of old ham gear.

1314. Need source for 39mHz crystal for 49.6 Mhz receiver design

Date: 1995-02-01 01:33:00 UTC
From: v064mb9k@ubvms.cc.buffalo.edu
Message-ID: <D3As7w.KAq@acsu.buffalo.edu>
Source record: 252805

I am currently designing a narrowband receiver based on
a motorolla chip to tune in frequencies of 49.6 mHz. The recommended
circuit diagram calls for a 39mHz crystal, a component that I have not been
able to find after checking many electronic component distributors. Can anyone
direct me to a source. I would appreciate any help.

In article <D355oF.HFp@news.hawaii.edu> jeffrey@math.hawaii.edu writes:

[Jeff's penchant for stepping on his dick deleted.]

As usual you just have to jump in and make an ass of yourself. I have already posted an appology here on the net and to the originator via e-mail about mis-reading his intent on using K1MAN as a beacon.

Perhaps while you're at it, you'd like to repeat your claim that I am (or was) bootlegging your callsign here in Southern California.

Maybe instead I just repeat someone else's remarks about you serving time on a sodomy beef.

And as usual for you, a completely off topic remark about my signature.

Pull your head out of you ass. There are those in government that know exactly why there is a second amendment to the constitution. And it is not worded "Right to recreational hunting or target practice". No is it worded "Right to keep and bear arms, with the exception of [insert list]".

Janet Reno recently said in a statement to the press, "The time has come to remove these weapons of destruction". This is the same person that authorized the incineration of 80+ citizens of the United States based on speculation.

Note: The FBI traditionally has taken what ever time is required to end a hostage situation rather. "Time is cheap. Dead is forever."

This posting should rate at least an 8 on the NH6IL whine-o-meter. I managed to mention, dick, ass (twice) and sodomy in the above posting.

> >Would someone please E-mail me the freq?
> >
> >I plan to use him as a 75 meter beacon!

And this is the original posting that I mis-read. Again, my appologies
to Horrock about that. However, please note what scotty wrote as a followup.

> Might make a good tune up frequency as well. Maybe as handy as the
> international broadcasters on 40 phone

OK, let me ask you this. Does this sound like a suggesting to tune up on
3975 KHz? And although not implicitly stated, on top of K1MAN.

73 es GM from Jeff
(I knew if I waited long enough, someone would suggest just that.)

Congratulations....This is the first LOGICAL and UNEMOTIONAL
response, I've seen to this issue. Actually, if more people
would have taken your attitude, and not started exploding
flame mail (do I get flamed for saying this?) it would have been
over quickly. As it is, AMSOFT has gotten TONS of free
advertising, and more word-of-mouth exposure than they ever
expected.

I kind of liked the touch on the part of one AMSOFT rep
who just recently put the WHOLE AD on each of his replies
as his signature file -- nice touch!

As a HAM who let his ticket expire 20 years ago (when I
got married and then joined the USMC), and is just this next
Tuesday re-taking the exam, I have just one question...

Do you guys behave this way on the air? My experience
has always been that of the courteous HAM. Helping the
Novice and "gently" correcting anothers mistake or
indescretion used to be the rule.

I, for one, would try expressing my opinion directly to
the miscreant, rather than e-mails to admins (which
obviously did nothing). I think the folks at AMSOFT might
have responded more favorably to a reasonably-voiced
complaint than to naked aggression. Also, be aware that

AMSOFT needs the HAMS to purchase their goods, so
I don't believe they'ed intentionally want to annoy us to
point of not buying their product(s).

****

Bob,
It seems to me you might be overreacting a bit. The fact is
advertising IS going to happen. It's you who is giving all these
companies free advertising with your remarks.

You seem to go on the offensive immediately. Perhaps you should
e-mail to the company involved, rather than instantly sending
tattle-tale mail to some admin type (who doesn't care anyway).

You posts so far appear to fluctuate between flame and whining.

If I were to post and heartily endorse a product -- that would
still be an ad of sorts, but according to you, that's OK. If I were
to post and announce to all and sundry that the new widget 400XL
is out and it's a beauty -- according to you that's still OK.
If I wrote software and responded to a request/post from another
person who publicly asked about my goods or services with a request
they e-mail me -- you seem to feel that's OK too.

How do I know? Because these three scenarios HAVE occurred on
this newsgroup, and you've NEVER objected.

Get consistant! All or none!

I AM NOT ATTACKING YOU! I am, however, pointing out that
except for yourself, and what appears to be a very few others,
nobody cares.

The ads I've seen have been brief, to the point and informative.
I feel that the purpose of these groups is interactive information,
freely exchanged, from EVERYBODY. 1st Ammendment applys here.

They can INFORM us of their product when is directly appropriate
to the group involved (HAMS -- HAM products and services).

A single company flooding the group with the same old song is
a breach of nettiquette -- not internet policy -- there ain't no
such thing. Accepted practice - granted! But there aren't
any written rules.

We must all learn to play nice. Please chill, Bob, before
you throw a stroke. Change is inevetable, in HAM radio, on
the net, in life.

I feel that a more reasonably-voiced complaint would cause
others to see your point more favorably. If the majority of
the population of this newsgroup find such posts to be informative,
then they are welcome, no matter what a more vocal minority
feels. Democracy 101.

I, for one, welcome INFORMATIVE advertising. I come onto the
net not only to exchange views , but to get information.

Thanks for listening/reading.

The views herein are my own any and all are free to agree
or disagree. I know I'm not going to change your mind, Bob,
just thought to throw in my opinion.

Why does world.std.com sound so familiar? Wasn't someone at that
site also posting ads on the rec.radio groups? This might explain
your `humble opinion':

>In my humble opinion, I think the AmSoft posting was appropriate.
>It told me a new version of the product was available and where
>to get more information. It was brief, didn't mention prices, and
>was posted ONLY to appropriate (ham radio) groups. This is useful
>information.

It was posted to *all* the radio groups many times. If only one post
to .swap had been made no one probably would have minded.

>A few facts:
>
>1. Years ago the Internet backbone was government funded and was only
> supposed to be used for non-commercial purposes. That changed about
> 3 or 4 years ago. It is now commercial with no restrictions on
> commercial use. I was the Internet contact for our site at the time
> so I got all the official info and saw the significant jump in the
> monthly bill.

A very large portion of is is still government funded: State taxpayers
foot the bill for the .edu sites (millions of dollars per year here
to run 5 unix mainframes for 45,000 students/faculty and to pay the
long DX telephone bills to all points in the Pacific). Keep in mind
that a good portion of the traffic that has originated at non-.edu
sites gets passed through those sites. If the state government-funded
.edu sites each pulled their plug Internet would probably cease to exist.
Thus, your `fact' isn't quite factual.

I have been told that the TH-79 is capable of recieving 800 to 950 or 990 mhz. The Mod is supposedly to add some minor components to a circuit board in the Radio. I have not been able to find a spec or mod sheet on this mod. Ive heard its supposed to be real easy though. Apparently the components required for recieving the 800 mhz area were just not installed, per that law that says radios in the US market can not be made to be "easily" modifiable for 800 mhz reception. *laugh* Oh well, any help would be grteatly appreciated. Thanx

Following the quake in Klamath Falls, an amateur radio operator was shown on the news listening to a Northwest emergency net on 3993 kHz. I'm not certain of the frequency--perhaps a local amateur will confirm it.

Another good source of info is the radio and TV remote band from 450 to 451 MHz. After last year's quake here, these frequencies were brimming with activity in short order, while the Police frequencies had very little info. If you listen to remotes, don't tell anybody (the ECPA of 1986 made it illegal).

The city of Rancho Palos Verdes in the Los Angeles basin recently went
and instituted a tower ordinance - but if I remember correctly the mayor
and a couple of council members are hams so it was rather ham-friendly.
You might want to give them a call (try area code 310- information) and
get a copy of the regulation.

> Anyhow, to make a long story short... How do you like the 530?????
> Has there been a comparison of the two?

When I got ready to buy my first HT two years ago, I did a lot of research, and narrowed my choice down to the TH78 and the FT530. They are pretty similar in features, so when I actually went to the store to buy one, side-by-side comparison helped make the choice for me. I decided on the FT530 for several reasons. I liked the well-lit keyboard, much better than the Kenwood. I also liked the slightly larger keys on the keypad. Even though it made the FT530 slightly large than the Kenwood, it was much easier to hit the correct keys. I also didn't like the sliding cover over the Kenwood keys, it make them harder to push also. Also, I was able to get the cheap Radio Shack external speaker mike for the Yaesu, they don't fit the connections on the Kenwood.

It really boils down to physical esthetics and how well you like the layout, I think the features are close enough that they are not a prime consideration.

Dave: I plan to run the list in an upcoming issue of The Canadian Amateur, Canada*s national monthly amateur radio magazine.

However, it is substantially the same as the list in the 1995 CQ Amateur Radio Almanac (they have a few more than appear in your list and also debunk some of the names).

So, I will give you and CQ joint credit for my hybrid, master list.

This is the more current thinking, probably closest to fact.

>
>
>Any of a number of books at your local library or bookstore can fill
>you in on the history and evolution of what we now call the
>"Internet". It's original purpose was to connect Universities and
>other educational institutions for educational purposes.

I must disagree herre, don't always believe what you read!! Just because it
is in print does NOT mean that it is in the least bit accurate. In the early
70's the "Internet" as you call it was born out of DARPA, Usenet, and several
other "local" networks. It's original purpose, no matter what is claimed
after the fact, was NOT to connect Universities. It's main purpose was to
allow exchange of information between large gov't agencies and their sub-
contractors, typically universities and such. Don't confuse the facts.

>Major
>advances in this regard were made by the National Science Foundation.
>Commercial participation was once excluded or severely restricted.

I agree with the first inthat the NSF funded research and development along
with others. However commercial participation has always been an important
part of the net...just ask BBN, DEC, etc about this. Ithink the difference
here is that it was better self-controlled... (opinion mine)

>The intended purpose of the "creators" was educational advancement
>(much of it at taxpayers expense), not providing commercial
>enterprises with new ways to make money.

BZZZZTTT! Wrong again read above...it was a gov't funded program...

>Commercial connections are
>now common, the limitations on use much more flexible. There are no
>laws that I know of which prohibit advertising on the net, however the

>vast majority of commercial enterprises connected to the net honor the
>traditional "ban" on overt advertising and limit their use to their
>own research and development purposes and for business communications.

See the above on peer pressure, self control, etc..

>They understand and respect the original purpose and intent of what
>has become the "Internet", and respect the wishes of the majority of
>users, as well as the wishes of those who have made "Internet"
>possible.

Again youmiss the point, read some of teh comp.sys groups and see how well
the big vendors "respect the wishes of the majority". Those companies use
the net as their own....whether you agree or not, that is the fact...

Internet is/was made possible by large donations of money, time and hardware
from big business and the government. Not by some collective of users or
universities. If we waited for academia to decide how to do things we would
still be waiting for an 8bit computer... Keep this inmind as things move
on and we "bite the hand that feeds us" turning the net over to the MCI's,
sprint's etc of the world.

>
>Virtually every major business from IBM to Intel to General Motors has
>Internet access. When was the last time you saw a commercial here
>from one of them?

Read the correct groups and you will see in some way shape or form either
blatant or subtle adverts from them all. They are not going to miss out
on a chance to target their market. How better to beat demographics?? If it
isn't happening in "your" group, IT WILL!

>
>Again, there are dozens of books that discuss Internet history and

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: In article <D328AE.FHB@hpqmoea.sqf.hp.com> dstock@hpqmdla.sqf.hp.com (David Stockton) writes:

: > Radio manufacturers provide a negative supply wire in the belief that
: >wiring it back to the battery terminal itself will reduce audio freq
: >noise on the power feed to the radio. Think of the pulsating current
: >(rectified 3-phase AC) from an alternator, if there is much resistance
: >in the battery - cable, there will be a voltage created across it. This
: >is what they are trying to avoid. Unfortunately, they neglect the
: >additional ground via antenna cable and bodywork which spoils this
: >attempt anyway. Fuses have quite large resistances, so the necessary
: >fire protection spoils the attempt still further.

: This is wrong. The purpose of the negative wire is to eliminate
: the ground loop through the chassis. This *common path* carries
: both the radio V- and the V- of all the other vehicle systems,
: some of which generate substantial current pulses. The current
: draws of the other vehicle systems will modulate the V- voltage
: seen at the radio via the common resistance. Now the idea of the
: negative lead is to *short circuit* this common resistance for
: radio return currents.

This disagreement hinges on the relative resistances of a run of copper wire from radio to battery (inc fuse) and the path via bodyshell and main battery ground connection. We seem to agree that the worry is common-path coupling of noise from other car systems, and to agree that a few feet of wire isn't a very satisfactory RF ground connection at 145 and 440 MHz.

: Since galvanized (and today, painted before assembly) steel body
: panels and structural members offer a considerably higher resistance
: than copper wire, the alternate current path through the antenna
: ground connection is essentially short circuited by the copper negative
: lead direct to the battery. A fuse may have up to 0.1 ohm resistance
: for a typical 20 amp cartridge fuse, but the body panel connection will
: almost always be greater than 1 ohm. This 10x lesser resistance via the
: negative lead will eliminate most of the common path current modulation.

I only disagree with Gary on rare occasions, but surely that "almost always be greater than 1 ohm" must be at least one order of magnitude off target ? If the best via-frame connection to the battery (-) you can get is 1 Ohm, then the greatest power that could ever be received by ANYTHING using a bodyshell return is 6 amps at 6 volts on a car with a 12v battery =36 Watts (with alternator running, say 6.9v and 6.9A = 47.6 Watts)

Bolted-on panels (and glued on ones too nowadays) are often very poorly bonded (electrically), but the welded steel monococque has very low point-to-point resistance. The art is in making sure you don't try to connect to add-on panels instead of the main structure. Remember that many cars have the starter return path passing through the bodyshell. Have 1 ohm and you won't start an engine.

I've actually measured voltage drops at known currents. 0.1 Ohm is a good estimate for the fuse. A frame return on a galvanised car can easily be less than 0.1 Ohm if the connections are made carefully. Many cars now use pre-galvanised steel sheet. Factory spot welding blasts the zinc in order to make a strong steel-steel fused weld. Large numbers of spot welds are in parallel (electrically and mechanically)

The weakness in getting your radio (-) connection via the frame is that noise currents from some car systems are very large, and that the battery-to-bodyshell cable is a weak link. The cable is meaty enough to keep the coupled voltage decently small, but dirty connections can create problems.

Rough numbers:

My radio is in a centre console, behind the seats of my Land Rover. Resistance of (+) wire and its associated fuse came to 0.22 Ohms. If I ran a similar wire for a (-) feed, it would have similar resistance This includes a 4mm connector to allow quick release. Resistance from the nearby bolt I used to the (-) post of battery was 0.018 Ohms. This is not really typical as my (+) cable is about 3 times the length of what you'd need in a small car, with a dash-mounted radio (although the fuse component won't reduce pro-rata). Also, mine has a monster sized diesel engine and the battery cables and posts are oversize because of the starting currents. I made proper 4-wire ohms measurements with a Kelvin bridge.

To get a wired (-) connection to compete with a good bodyshell connection, you'll need to use heavy electric welding cable

I accept Gary's point that your antenna may be mounted onto an add-on panel that could have high resistance to the main structure of the car. What I am recommending is hard grounding with big, short braid, the radio to the main vehicle structure and not running a wire all the way to the battery (-)

Cheers
David GM4ZNX

Well, Dave, as the person (or at least *A* person) who sent the list
out in response to this subject question, I'll apologize for bruising
your ego. But that list has been sitting around in one of my
directories for so long that I had no idea where it came from. That's
the nature of "lists" that appear on a newsgroup, but don't get updated
very frequently --- folks don't remember where they came from. Geez...
if I had to go back and identify the author of every funny story or list
that has appeared here, I'd be in real trouble. But I do share them freely
with others. I doubt very much if the sig file stays with many documents
for long.

Hello All;
I require information on installing a HF Amateur Radio
antenna on the top of a large truck. I'd like to know
what options I have for doing this. The antenna can be
(And probably will be) stowed while the truck is moving,
and then erected when it is stopped. I wonder if there's
any way of automatically stowing and erecting the antenna
by pressing a button rather than having an operator climb
to the top to erect or stow it?

fyi - in case you're wondering why I would want the antenna
stowed while moving, and erected while stopped ... this
station will be part of a mobile educational exhibit.

Please provide me with manufacturers if possible. Thanks !

From: cnc23a@b4pph13e.bnr.ca
Message-ID: <3go4ea$5c2@crchh327.bnr.ca>
Source record: 252636

I have a pair of UHF Micors that we are going to put into service for a club UHF repeater. The problem is that L302-L307 and L402-L407 are not in either rig. I an wanting to run then in the T=R mode and wish to know how to tune the transmitter. The service manual seemed to indicate that the exciter filters (the L302-307, 402-407 inductor set) was the key.

I was able to see about 100 watts when I used the (T^=R) mode where the offset was 5 Mhz (Higher).

What am I missing ??

Are there any neat "tricks" to tuning the trnsmitter (exciter) section ??

>Andy KB9CAT

Well, to be perfectly honest I was not interested in having
a LOT of "more interested parties", and figured that if other groups
wanted to take their queues from this idea and create -

alt.radio.amateur.ARRL

alt.radio.amateur.<insert org name here>

.....that would be fine by me. The potential chaos of trying to lump them
all together in a broader ranged newsgroup has the potential to create
some friction that we don't need. However, as you point out, it might
end up being the way to go just for the sake of expediency in getting
it started.

The primary and I believe stated goal of Ten-Ten International
is the "use and preservation" of the 10-meter band. For the time being
at the bottom of a sunspot cycle, mostly ten meters pretty well sucks.
Creating an additional forum for persons interested in ten meters and
thus possibly in the organization to set up skeds and so forth struck
me (and several of the original respondents) as a good idea......since
there are some officer-level persons within the 10-10 heirarchy who
do have some level of computer access, getting them connected to the
internet and thus, to the newsgroup would provide an extra connection
between some members, potential members, etc. to those officers, which
ALSO seems like a good idea.

While I have not as yet presented that possibility to said
officers yet (there being no specific newsgroup to present to them),
I would be surprised if they would frown upon it.

So, I guess it comes back again to trying to find someone to
create the alt group for me.....

Hello All,

There has been an on-going discussion of the new ARRL (W3EP) rover
rules for ARRL VHF contests. Up until now, the discussion has been
taking place via mail with Roger Keating (KD6EFQ) maintaining a list of
participants and forwarding mail to that list. Jim Reisert (AD1C) has
graciously agreed to setting up an automated reflector at:

vhf-rover@sttng.eng.pko.dec.com

with subscription requests going to:

vhf-rover-request@sttng.eng.pko.dec.com

If you'd like to be added to the list, simply send a mail message to
vhf-rover-request@sttng.eng.pko.dec.com with a line starting with the
word subscribe.

To unsubscribe, just send a line to vhf-rover-request@sttng.eng.pko.dec.com
with the word unsubscribe. For help, send a line starting with help.

The list is archived and an index of the archive files (files named
vhf-rover.YYMM), can be retrieved by sending a line starting with
index.

Please remember to use vhf-rover-request@sttng.eng.pko.dec.com for
administrative requests and not vhf-rover@sttng.eng.pko.dec.com.

This discussion is occuring due to the dissatisfaction among a number
of rovers over the recent changes that occured in the ARRL VHF
contests regarding rover scoring. Prior to the January Sweepstakes,
rover's multipliers accumulated as they moved from grid to grid. The
new rules make the score simply a sum of the individual grid scores,
i.e. the score is arrived at by calculating the score for each grid
in the identical manner for a fixed station in that grid and then
adding the individual scores together.

A number of proposals have been made and some additional ones are
about to be posted. To start things off, I requested on the old list
and will request here that:

1) Try to maintain some decorum? No personal attacks or attributions
as to why someone is lobbying one way or another. That serves little
purpose other than to add unnecessary heat into the debate. An
example would be questioning someone's rover experience as it isn't
particularly relevant.

2) Lets try to get some order to the debate. Can we first settle
on some goals and non-goals for the rules? Some have been proposed,
but until we agree upon a set of goals for the rover category, it will
be impossible to agree upon a set of rules.

Finally, thanks again to Roger for getting this started and being a
manual list maintainer, and to Jim for setting up this automated list.

With that out of the way, let the discussion continue.

73,
Todd and Roger
N9MWB KD6EFQ

Thank goodness, I was about to tune to 640 or 1240 on the AM dial. :-)

Gary

1350. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-01 18:40:43 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-791664039@gonix.com>
Source record: 252734
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.10 10/30/94 22:07:48
Changes: Uniform Resource Locators (URL's) now used throughout
Posting-Frequency: posted on the 1st of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to Greater Omaha Public Access Unix, which was motivated by a desire to seek a stable site for the Elmers List for some time to come. See my signature below for the new addresses. My old E-mail addresses, at the University of Nebraska at Omaha, will probably work for the foreseeable future, but are not guaranteed.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at the Ohio State World-Wide Web Server (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have

adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month

on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one.

Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers

The advantage of reading the Elmers list at this site via WWW client software is that all URL's are converted to hypertext links.

see also:

news:comp.infosystems.www.misc
news:comp.infosystems.www.providers
news:comp.infosystems.www.users

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

Amateur Radio Elmers Resource Directory (as of 02/01/95)
++++++++++++++++++++++++++++++++++++++++++++++++++++++
- A -
++++++++++++++++++++++++++++++++++++++++++++++++++++++

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Howie Goldstein and Bob Nielsen for more information about TAPR)

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:
```

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(See also Tony Schliesser)

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service

Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting
company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would
like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals
in amateur radio. The first manual was the DJ-590 and subsequent manuals
included the 560,580 and 600 for Alinco. My contacts in the amateur radio
community have helped other amateurs to know more about products, hidden
features and new product offerings. The BBS will now include the latest
info on YAESU and ALINCO products. If you have a product that you wish to
have evaluated for the general amateur community, please contact before
sending.

If you have questions with regard to customer service at these
companies, please forward to me and they will be passed to the company
contacts.

Tom Bruhns K7ITM

tomb@lsid.hp.com

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into
DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Scott Ehrlich Amateur Radio Callsign: wy1z E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list (KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)
qrp-l (QRP, or low power, radio, previously maintained by Bruce
Walker at think.com)
arrl-exam-list (amateur radio license examinations scheduled in the US and
in some foreign areas.)
arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list, I have incorporated both of these listings into the Boston Amateur Radio Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put together a World-Wide Web page for the American Radio Relay League (ARRL).

Since the ARRL does not yet have web capabilities of their own, this page is being offered on the same site as the Boston Amateur Radio Club's web page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff, official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word "help" in the body for more information). Ask me for more details about this.

++

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If anyone is having a problem with CATVI, send a 9X12" SASE with 4 units of postage to the ARRL Technical Department Secretary. Ask for the "EMI/RFI Package" and "EMI/RFI - CATV." The CATV package includes a reprint of the article I wrote for Communications Technology -- the journal of the Society of Cable Television Engineers. Your local cable company will recognize this publication and will give credence to the words therein.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

ARRL info server files may also be accessed via anonymous FTP at:

ftp://oak.oakland.edu/pub/hamradio/arrl/

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be
someone who has enthusiasm for hobbyist radio, experience with UseNet, and
the ability to work with the other editors. No single person can know
all the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is
written in PERL. So it would be a plus for volunteers to post the
FAQ to have PERL installed on their system and be able to use "cron"
or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
maintainers, as well as anyone with a sincere interest in helping
keep the rec.radio.amateur.* newsgroups the friendly and useful
forums they are today, is also available. To subscribe, send E-mail
to rra-wg-request@amdahl.com.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

+--- Mike Knell -- Squashed Lagomorphia on the Information Superhighway(tm) --+
| Vending machines should NEVER NEVER| SMTP thing: m.knell@unicorn.nott.ac.uk |
| EVER eat money. - RFC1288 (Finger) | AX25 thing: G7GPA@GB7COV.#29.GBR.EU |
+----------- These are my opinions, not anybody else's, so bog off. ----------+

There is now a mailing list set up for the UK TCP/IP Networking Group
(UKIP). This is a loosely-organised group set up to promote the use of
TCP/IP networking protocols over radio in the UK, and to encourage the
establishment of high-speed backbone links and network gateways.

If you want to subscribe:
Send mail to ukip-request@cs.nott.ac.uk. This is handled by a
human rather than a listserver, so be polite :-)

To post to the list:
Send mail to ukip@cs.nott.ac.uk. Subscription requests and other
administrative bits and bobs should go to ukip-request, _not_ to
the list as this just means that lots of people read your
subscription message and get cross.

I can personally answer quite a lot of the questions about TCP/IP-related
subjects.

Be forewarned that the list is fairly technical in its discussions, so
probably not the best place for beginners to start :).

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

++

Chris Peckham WG2W

cdp@hertz.njit.edu

Owner of Ham-Univ Mailing List for College and University Amateur Radio Clubs

To subscribe, send E-mail to listserv@listserver.njit.edu. In the body of the message, write:

SUBSCRIBE HAM-UNIV

and you should get an acknowledgement very shortly.

To post to the list, send mail to ham-univ@listserver.njit.edu. To unsubscribe, send mail to listserv again and put:

UNSUBSCRIBE HAM-UNIV

in the body.

For general help about the listserver, send "HELP." Problems that can't be solved any other way should be sent to my E-mail address above.

Remember to use ham-univ only for message posts and to keep the listserv updated with respect to your E-mail address (or lack thereof) to save work for those of us at the New Jersey Institute of Technology who have extended this service.

Terrence R. (Terry) Redding WB5LMJ

DOMAIN: terry%red@lawton.lonestar.org
UUCP: . . . !rwsys!lawton!red!terry
PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
116 SW 75th Street, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
- Research in adult learning theory, adult motivation and organizational theory.
- Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Peter Reynolds reynolds@stc.nato.int CompuServe: 100276,1340
voice: +31-70-314-2401 fax: +31-70-314-2111 radio: KE4BAD
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague, The Netherlands

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

Modulation types - FSK, PSK, MSK
Error control - various types of ARQ and FEC systems
RF - Antennas, HF propagation
Networking - TCP/IP over HF
Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In the future, an archive of files will be accessible by anonymous
ftp or possibly by email. In the meantime, check the FTP site:

ftp://ftp.ucsd.edu/hamradio/

for AMSAT-related files. Consult your local guru for help on using
anonymous ftp.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to
certain people (for example, AMSAT Board of Directors members or
PACSAT command stations). Currently the following public mailing
lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from
the AMSAT News Service. These messages are posted in
a form suitable for direct posting to a packet radio
BBS system. Each message contains a Bulletin Identifier
(BID), which permits the message to be introduced into
the packet network at many places without resulting in

duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/HamRadio/scripts/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

! ATTENTION RADIO NEWCOMERS!

! Are you interested in radio communications but don't have
! enough information? Do you have questions but no one to
! ask? Are you looking for a publication geared toward the
! novice radio enthusiast?
!
! ***** FIRST CONTACT *****
!
! "First Contact" is a newly forming publication. An
! electronically distributed email newsletter via the Internet
! for the beginner. Here is a forum to get the information
! you're craving. Get involved in this fascinating hobby!
! Scanning, ham radio, shortwave listening, CB radio,
! General Mobile Radio System (GMRS), etc. will all be
! covered.
!
! You input is essential to the success of this publication. I
! need to know what you want to know and what subjects
! you want covered in the newsletter. I will attempt to
! publish on a monthly basis, possible bi-weekly if there is
! enough interest.
!
! The only "cost" on your part is to fill out a subscription form
! completely (E-mail for a copy). A classified section is being
! contemplated with a small fee to advertise. Hard copies
! will be available to those without email access. Please
! contact me for details.
!
! Everyone is welcomed to subscribe whether you've never
! turn on a radio or whether you're an old-timer. I am
! looking for authors to contribute short articles on the
! subjects you request.
!
! So let's get "First Contact" off to a good start! Get your
! radio information via email. Subscribe NOW!

! --
!
! Greetings and welcome to the new and improved (but still vintage)
! "boatanchors" mailing list. An automated list manager should help

! things run more smoothly for everyone while still providing the same
! outstanding signal-to-noise ratio we have enjoyed since the list's
! beginning.
!
! I have agreed to provide a new home for the list, with the blessings
! of Paul Prescott N1AAC who took over from Our Esteemed Founder Jim
! Lockwood KM6NK.
!
! NOTE - You need not re-subscribe or take any special action other than
! noting the new addresses listed below. The subscription list was moved
! intact from the old mit.edu site and you are already on it if you got
! this message.
!
! Subscribers of the satellite list on boatanchors@beacons.cts.com will
! also be moved to this new address.
!
! The new mailing list address is now

boatanchors@ThePorch.com.

! Use this now for messages of general interest to the entire group
! Please don't use it to subscribe, change address, etc.
!
! The new automated list manager address is

ListProc@ThePorch.com

! Use this for subscribing, unsubscribing, getting archived info,
! getting the FAQ message, changing your address, etc.
! Now send a message to ListProc@ThePorch.com with just
! HELP in the body to get info on how to do this.
!
! The new list owner address is

ListOwn@jackatak.ThePorch.com

! Use this address only when there is a problem which really
! truly can't be resolved otherwise.

>
> I am currently designing a narrowband receiver based on
>a motorolla chip to tune in frequencies of 49.6 mHz. The recommended
>circuit diagram calls for a 39mHz crystal, a component that I have not been
>able to find after checking many electronic component distributors. Can anyone
>direct me to a source. I would appreciate any help.

Here are sources recomended by Motorola.

California Crystal Laboratories (800) 333-9825

Fox Electronics (813) 693-0099

International Crystals (405) 236-3741

Standard Crystal Corp (818) 443-2121

Plus you could try JAN, Bomar, and the other usual suspects. For
other than standard microprocessor crystals, TV color burst crystals,
and frequency standards, resort to crystal manufacturers direct is
usually the only way to get the crystal you need. Distributors just
don't carry that sort of thing.

Hi All,
We have a KRP 5000, 440 Repeater and an ACC-96 Repeater Controller for sale. They are about 18 months old and work great. The reason that we are selling them is that they won't work with our present HF and Allmode VHF remote bases.
Selling price on the KRP 5000 is $1500.00
Selling price on the ACC-96 is $700.00

Please respond to me:
Tom Cagan, KB6NQW. KB6NQW@WB6WFH.#SOCA.CA.USA.NOAM

1359. Bad Publicity For Hams

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-01 19:36:13 UTC
From: arthurc@crl.com
Message-ID: <3gonrd$i39@crl10.crl.com>
Source record: 252743

This is an excerpt from a recent article on Kevin Mitnik, a notorious hacker whose story is recounted in Hafner and Markoff's book *Cyberpunk*. Mitnik is a general-class ham (you can look up his callsign in the QRZ CD-Rom). But what especially annoys me is the implication -- utterly false, as folks here know -- that you have to be a Ham to own and operate a scanner.

****
Forwarded Message
****

US Marshals On Trail Of Hacker
-> WASHINGTON, D.C., U.S.A., 1995 JAN 26 (NB) -- The US Marshals Service is on the trail of a computer hacker who disappeared after being convicted of one electronic crime and charged with another.

-> Authorities say they are trying to locate Kevin David Mitnick, 31, originally from Sepulveda, California.

-> Deputy US Marshal Kathleen Cunningham told Newsbytes the Marshals Service has had a probation violation warrant for Mitnick since November 1992, and almost caught up with him in Seattle last October.

-> Cunningham said Mitnick is a ham radio enthusiast and is believed to use a scanner to keep track of police in the area where he is hiding. "(Local police) didn't use radio security so as soon as his address was mentioned he was out of there. He just left everything."

>
>Can anyone tell me what additional features the Kenwood Tm-733A has over
>
>the TM-732? Thanks. Robert WD5AAT

Robert, the TM-733A is alledged to have better intermod performance.
I bought a TM-733A that still has intermod problems. It has this button labeled "AIP" that is supposed to eliminate intermod. It helps when engaged, but it still has intermod problems.
There may be other differences, but that was the one I was primarily interested in (and disappointed with).

> antenna on the top of a large truck.

Tim-

There are several antennas that might be used, but none I know of would be "self erecting". There may be some designed for military operations, that could be adapted. However, these would probably be rather expensive.

On my automobile, I use a Hustler quick-disconnect (Model QD-2) adapter between the antenna mast and the mount. For your installation, using a mirror mount on the cab of the truck, may be the most practical approach. The quick-disconnect adapter would allow rapid installation or removal. The mirror mount should be available at Radio Shack and other CB shops. The Hustler QD-2 is available at Ham stores like Amateur Electronic Supply and Ham Radio Outlet.

You didn't mention what frequencies you wanted to use. If they were outside of the Ham bands, ordinary Ham antennas may not be adaptable. If a wide range of frequencies would be used, you might choose to prepare a separate antenna for each, and manually change them when needed.

There are automatic antenna tuners available, that work with a single long whip, to tune all frequencies. In my opinion, this approach doesn't work as well as having an antenna optimized for each frequency. However, it is often more convenient, and might be necessary for frequencies that were far away from the Ham bands.

I hope this is of help.

Ham Ballooning FAQ
or
"What little I know about ham ballooning, by N9LTD"

This is mostly stuff I learned from Joe, WB9SBD, who got me into this mess. I've chased a half dozen of his Near Space Science (NSS) balloons, helped him launch several of them and balloonmeistered two launches for High Altitude Radio Project (HARP). This is version 1.0 of the FAQ, so please excuse any mistakes or omissions.

THE MOST IMPORTANT RULE

Rule #1 for those interested in getting into ham ballooning: Join a group that's already launching balloons to learn the ropes. I can't tell you everything you need to know in a FAQ. Don't try to learn it all yourself by trial and error, learn it from someone who's actually doing it! Start by volunteering to chase the balloons. Chasers are ALWAYS welcome. Special DF equipment is not necessary. There comes a point in every flight where the balloon is laying on the ground and its range is so short that nobody can hear it. That's when lots and lots of people are needed to drive around until they pick up the signal. Once the balloon can be heard, people with DF gear can start tracking it down. Balloons often land in trees and marshes, so hunters and tree climbers are always welcome on chase crews. Bring your hip boots.

Then help with a few launches. See what's involved in filling and launching a weather balloon. Get a look inside the payload box to get an idea of the construction required.

Then find out who in the FAA the group contacts when arranging flights. The regional FAA office will probably have one person who handles most of the ham flights and he will be MUCH more comfortable with your request to launch if you tell him you've been working with a group that's had several safe and successful flights and are following their procedures.

Here's a list of what our group has been using for ham balloons and where we find what we need. As I said above, I got most of this information from WB9SBD.

BALLOONS

We use Totex weather balloons. They seem to be the best quality. We purchase them from:

Kaymont Consolidated Industries, Inc.
21 Sprucetree Lane
P.O. Box 348
Huntington Station, NY 11746
Phone (voice): 516 424-6459
Phone (fax): 516 549-3076

Balloons are sized by their weight in grams. Kaymont currently carries two sizes, 800 and 1200 grams. The 800 gram size will lift 3-4 lbs to 100,000 feet. The 1200 gram size will take a full six pound payload to 100,000 feet. Prices are about $45.00 each for the 1200 gram balloons. Kaymont accepts telephone orders and credit cards.

BATTERIES

Only one type of battery will do: lithium. Nothing that is available on the commercial market approaches lithium's power per pound. We normally purchase military surplus lithium battery packs. They contain 10 D cells in a series/parallel arrangement that produces 15 volts. The packs come apart very easily into two 5 cell strings. The D cells themselves are connected with welded tabs that can be easily cut and soldered into whatever voltage and amp/hour combination you need. The D cells are 3 volts each, so 3 will give you nine volts, 4 will give 12 and 5 cells will give 15 volts. The cells in the battery packs will typically be out of date, but lithium cells have an excellent shelf life and we've never been disappointed. You can expect 6 AMP hours from each 3 volt D cell.

I connected a single 3 volt lithium D cell to a 10 Ohm resistor, put a Radio Shack RS-232 VOM (lent by Don, K9LYE) across it and let my computer log its progress. The voltage _rose_ slightly for the first half hour to 2.81 volts and it then stayed there for 22 hours before it started to drop! It didn't drop to 2.5 volts until 24 hours after starting the test. I put a 5 ohm resistor across a second D cell and the voltage stayed at 2.78 volts for 12 hours. That's 6000+ mah per cell! A 5 D-cell pack will provide about 3.3 watts for 24 hours or 6 watts for 12 hours. You really need about 12 hours of capacity. That gives you four to six hours for the flight and another six hours to recover the payload when it lands.

Here are our results for various resistances across a single 3 volt lithium D-cell:

Ohms	Peak Volts	Peak Amps	Life in Hours	Watts per cell	Watts per 5 cells	Notes
10	2.8	.28	24	.78	3.9	(Lifetime measured to 2.5 V)
5	2.78	.55	12	1.53	7.6	" " " "
3.3	2.75	.82	8	2.25	11.2	" " " "
2.5	2.71	1.08	6	2.92	14.6	" " " "
0.77	2.46	3.20	2:14	7.87	39.4	(Lifetime measured to 2.0 V)

(That .77 ohm load was a mistake. I thought I had 4 10 ohm / 10 watt resistors in parallel. One of them turned out to be 1 ohm. Boy, did it get hot!)

We order our lithium batteries from:

S & G Electronics
618 S. 62nd St.
Philadelphia, PA 19143
Phone (voice): 215 474-7663

Prices run around $15.00 per pack of 10 cells.

S&G accepts phone orders, but not credit cards. They will ship C.O.D., however. S&G is a real mom and pop outfit and very nice people to do business with.

GAS

We use Hydrogen because it's cheaper (about $20.00 per cylinder versus $40.00 for helium) and has more lift. Also, we're not too bright. Hydrogen has two drawbacks: it burns and it explodes. On the other hand, it's not super vicious. Your balloon will be delivered with no air in it. Don't let any get in while you're filling it and the hydrogen can't explode in your balloon. If the balloon bursts while filling it indoors, get out and let the hydrogen dissipate for a while. Don't flip the light switch on the way out. Try to do your inflation in an old, leaky building just in case the balloon pops. An old barn with lots of holes in the roof is ideal for working with hydrogen.

Buy hydrogen (or helium) at any welding supply shop. You will need the biggest tank they have, size K or T, which will typically come up to about your shoulder. Put another way, it will just barely fit into the back seat of a Ford Taurus. Try not to get into any accidents when you have a tank full of high pressure hydrogen in your back seat. In the event of a serious traffic accident, you needn't worry about being injured. You will die.

Either size tank will fill a 1200 gram balloon with gas left over.

You should have a regulator for your tank to lower the 2000 pound plus pressure to a few pounds, although in an emergency you can tape the filling hose to the outlet of the tank and then open the valve _very_ carefully. I've seen it done, but I don't recommend it.

You can rent regulators at the same welding shop you buy your hydrogen at. If they don't have hydrogen regulators, you can use a nitrogen regulator with a $15.00 adaptor the welding store can sell you. Helium is used a lot, so they will probably have helium regulators in stock. ARRANGE FOR YOUR GAS PURCHASE AT LEAST TWO WEEKS BEFORE FLIGHT. The welding shop may need time to do a credit check on you. If not, they will require a $50 - $100 deposit on the tank. You have to rent the tank, they won't sell it to you.

Regulators typically rent for about $5.00 a week. You'll also have to rent the tank at about a dime a day. The welding shop will give you a hazardous material form that MUST be carried in your vehicle at all times the gas tank is on board or you are liable for a multi-thousand dollar fine.

INSTRUMENTATION

The BEST instrumentation is a GPS receiver sending its data to a packet TNC and a transmitter. This will send you the balloon's latitude, longitude and altitude. They're wonderful! Note, however, that many GPS receivers won't work above 60,000 feet. This is because of export regulations designed to keep Saddam Hussain or somebody like him from using a GPS receiver to improve the accuracy of a Scud missile. The actual regulations ban export of GPS receivers that can measure speeds in excess of several hundred miles per hour at altitudes above 60,000 feet. Motorola GPS boards are reputed to work above 60K feet at typical balloon speeds. Most manufacturers can provide you with versions of their firmware that will work above 60k feet, but you will have to sign a non-export agreement.

Note also that the accuracy of GPS signals is purposely degraded to about 100 yards horizontally and 300-500 feet vertically to keep Russian ICBMs from using them to achieve the +/- 10 yard accuracy necessary to take out a hardened missile silo. This will make your readings, especially altitude, jump around a bit.

Make sure your GPS receiver has a NEMA output. This is a 4800 baud RS-232 ASCII output in a standardized format. It was originally designed for use on boats, to let things like LORAN receivers work with autopilots. If the GPS receiver can be programmed to send lat, long and altitude every minute or so, you can connect this output directly to the TNC input and let her rip. APRS programs are designed to handle this data format. However, if the receiver sends its data constantly, you will have some overflow problems feeding a 1200 baud TNC.

CHEAP ALTIMETER

Thanks to Kevin, WB9YHB, we now have a cheap electronic altimeter. He spotted a Microswitch pressure transducer in a MECI surplus catalog that provides a 1 to 6 volt output that is linearly proportional to pressure. The catalog blurb:

PRESSURE TRANSDUCER Absolute pressure sensor for 0-15 PSI range. 45PSI maximum overpressure with 0.333 volts per PSI sensitivity, .75% linearity. Three wire PC mount. Mount holes 2-1/16 O.C. Includes spec sheet. Mfg: Microswitch Mfg P/N: 142PC15A
MECI PART NUMBER: 540-6206F

It's a whopping $2.95, unless you order 10 or more when it drops to $2.50 ea. It's small, light and runs off 8 to 12 volts. It only

requires one resistor. I ordered ten of them in Dec, 1994 and they had about 700 left. Hurry and get yours now. :)

CHEAP FLIGHT COMPUTER

Computers don't come much cheaper than Parallax's BASIC Stamp. This $39.90 device is a printed circuit board the size of a large postage stamp containing a microprocessor, 256 bytes of EEPROM, 8 programmable I/O lines and a 5 volt regulator. One end of the board has a pair of sturdy clips for a 9 volt battery, which will run a STAMP for several days. Small as the board is, half of it is a prototype area containing a 10 x 14 array of isolated plated through holes for your circuitry.

The Stamp has a 4 MHz clock and comes with a built in Integer BASIC interpreter. You write your BASIC program on a PC using Parallax's special BASIC editor and then download it to the Stamp's EEPROM with a cable that connects to your parallel port. (Don't know if a Mac can use the BASIC Editor when running a PC emulator.) The program starts immediately and it restarts every time you connect power afterwards.

Each of the 8 I/O lines can be independently programmed as a TTL/CMOS compatable input or output. An output pin can source 20 ma and sink 25 ma. Each pin can also be an RS-232 input or output at speeds up to 2400 baud. (Note, the output is 0-5 volts, which isn't _true_ RS-232, but it works with everything I've tried so far.) The inputs work fine with standard RS-232. The "RS-232 interface" consists of a current limiting resistor.

Parallax's application notes show how to connect an ADC0831 8 bit analog to digital converter chip to the stamp. This is an 8 pin chip with a serial interface that connects to the Stamp with just 3 wires. We currently use two of them and two Radio Shack thermistors (p/n 271-110) to read inside and outside temps. The data is sent to the ground by Morse code, also generated by the Stamp. My next generation board will use a ADC0838 chip, which has 8 inputs. The Stamp also has a Radio Shack reed relay mounted on it which snaps pictures with a 35 mm camera after every ID. The 831s and 838s are available from Digi-Key.

A Cheaper Flight Computer

Parallax has actually found a way to make a BASIC Stamp for even less money! The BS1-IC is a 1.4 x .4 inch PCB with surface mounted parts and 14 pins sticking out of one side so it can plug into a socket like a SIP. (Single Inline Package) It contains EVERYTHING a standard Stamp has except the 9 volt battery clips and it's only

$29.95!

A More Powerful Flight Computer

Parallax is promising the Super Stamp (or Stamp II as they call it) in Feb 1995. (It was originally promised for Nov 94.) This is another surface mount board, with the form factor of a 24 pin DIP. It will have 16 I/O pins, a 20 mhz clock, 2k EEPROM, 9600 baud RS-232, DTMF encoding and decoding, built in A/D and more. Time will tell if they deliver it all. The price is to be $49.95.

Parallax BBS and FTP site

The Stamp manual, application notes and programs are available on the Parallax BBS at (916) 624-7101 or by anonymous FTP from PARALLAXINC.COM

Avoid the BASIC Stamp Programming Kit

Parallax will be happy to sell you a BASIC Stamp programmer's kit for $99.00. It contains a cable to connect the Stamp to your PC's parallel port, a manual, a set of application notes and a disk with software. The manual, application notes, software and pin out for the cable are available for free download on their BBS and FTP site. On the plus side, the programmer's kit comes in a really neat cardboard box, which I've gotten a lot of use from.

PINOUT for the PARALLEL PORT to BASIC STAMP CABLE

DB 25 BASIC BS-1C
Connector STAMP (Stamp SIP)
2 3 5
11 2 4
25 1 <<< 3 (GROUND - Marked <<< on Stamp)

All of the BASIC Stamp products are available from Digi-Key or you can order from Parallax at (916) 624-8003.

35mm CAMERA

What's the world look like from 100,000 feet? A camera can tell you. A few 35 mm cameras can automatically snap a picture every ten minutes, but we couldn't find one. Next best is triggering a camera electrically with a reed relay driven by a BASIC Stamp output pin. We use a "Canon Sureshot esprit".

If you remove the bottom screw nearest the tripod hole, you can remove a small plastic plate that uncovers a flexible printed circuit board. If you hold the camera upside down with the lens facing away from you, you will see a horseshoe shaped ring of circular solder pads with one pad missing at the top. Number the pads counterclockwise starting with the pad to the left of the missing pad. Short pads 1 and 3 together and run a wire from pin 1 and pin 2 to the normally open contacts of the reed relay. Close the relay

contacts for 1/4 second and you'll take a picture.

NOTE: You will have to either use wire thin enough so that you can replace the plastic plate or you'll have to cover the hole where the plate was with black electrical tape. If you don't, a light leak will fog one corner of each picture.

Which way to point the camera? Well ... if you point it down, you get great aerial photographs of the earth below you. It's a lot of fun spotting familiar places and just plotting the balloon's course after the flight by finding landmarks on the pictures. On the other hand, if you point the camera horizontally, you get some magnificent photos at high altitude. Your balloon will go so high that the sky will be black and you can see the curvature of the earth on the horizon. Your choice, I guess.

BASIC BALLOON CONSTRUCTION

The basic balloon setup is one weather balloon, five to ten feet of 50 lb test cord, one parachute tied to the cord at its apex, another five to ten feet of cord tied to the parachute shroud lines with a radar reflector attached to its middle and the payload. You HAVE to have the parachute and radar reflector - FAA regs. Ditto for the 50 lb (max) cord.

RADAR REFLECTORS: We now know for certain that just hanging a space blanket from the package won't work. They barely show up on FAA radars. Best bet: a styrofoam corner reflector covered with space blanket material. Look in a boating catalog for models. Hints: forget aluminum foil, it's too heavy. Ditto for cardboard. Space blankets (very thin aluminized mylar) work fine and are featherweight. Get them from sporting good stores.

Payloads

REDUNDANCY! Live by that word! Have at least two transmitters. Each transmitter should have its own, totally separate power supply. If your package isn't transmitting when it lands, you aren't going to find it. One transmitter can be a milliwatt rig running from a 9 volt battery. Hint: you can buy oscillator modules from Digi-Key for a few bucks each that have frequencies in various HF ham bands. They run on five volts and draw next to no power.

It gets down to 60 below zero Fahrenheit at 40,000 feet. An insulated package is necessary. A styrofoam beer cooler is light, cheap and a great insulator. If it's well sealed, things will stay quite toasty inside. Our lowest inside temps have been about 43 F. with a leaky package (lots of antennas sticking out through holes that weren't sealed with goop) to about 70 F. with very tight packages. Our HIGHEST internal temp was 132 degrees F with a very tight package containing two transmitters that used a total of about ten watts from two battery packs. Remember, about 1/2 of all the power your transmitter draws stays inside as heat.

Put an audio beeper on the outside of the package. This will help you zero in on it if it lands in dense brush or woods. MAKE SURE THE BEEPER CAN BE TURNED OFF FROM THE OUTSIDE AND PUT PROMINENT INSTRUCTIONS FOR DOING SO ON THE OUTSIDE OF THE PACKAGE! We had a farmer find our package and take it back to the farmhouse. The beeping was so annoying that he put it in a metal granary to muffle the sound - and the signal we were tracking went to zip! Luckily, we had our address on the package.

PUT YOUR ADDRESS AND PHONE NUMBER ON THE OUTSIDE OF THE PACKAGE! Mention a $50.00 reward to the finder. So far, we've had one package found by duck hunters, who promptly switched the transmitter off. A second package wound up in a metal granary and a third had its single set of batteries die on the way down. We got all three back because people found them and called us.

DON'T PUT AN ON/OFF SWITCH FOR THE TRANSMITTERS ON THE OUTSIDE. You WANT that signal to stay on so you can track it down!

Put "HARMLESS HAM RADIO TRANSMITTER" on the outside. After all, many people get concerned when a package bristling with antennas and going "BEEP BEEP BEEP" parachutes into their bean field.

The Federal Aviation Administration (FAA)

Unmanned Free Balloons are covered under section 101 of the Federal Aviation Regulations (FARs) along with Moored Balloons, Kites and Unmanned Rockets. Call your local control tower and they will mail you a copy of this section. Be prepared to play some telephone tag.

NOTIFYING THE FAA: The FAA wants to know about your flight at least one week in advance. If this is your first flight, call them a month in advance and talk things over with them. You will typically want to call the local "Center". Here in Wisconsin, we call Chicago center. If you can't find their number in the yellow pages, under Department of Transportation, try calling the local airport control tower. Be prepared to play some telephone tag. If other people in your area are flying balloons, ask them who they talk to and get the number from them. (See The Most Important Rule above.)

The FAA center will want to know when you intend to launch, where from (distance and direction from a town on a map), how high you expect to go and what direction you expect it to travel in. This last part can be hard to answer a week in advance, but generally it will follow the prevailing winds in your area. Here in Wisconsin, we always guess that the balloon will travel to the south east. You should also leave your number in case they have questions. If the person you want to speak to isn't in, be sure to leave your name and number so they can get back to you.

24 hours before launch, you have to call your local Flight Service Station (FSS) and file a Notice to Airmen (NOTAM) giving the launch site, date and time, expected max altitude, expected rate of climb, expected direction of travel and landing spot. Your local FSS will

have an 800 number. These people can also give you the winds aloft if you ask. Most pilots have no use for winds aloft over 30,000 feet, so tell the FSS that you're launching a balloon and ask for wind speed and direction for as high as they have data for. This will typically be about 50-60 thousand feet. Try to get the winds aloft for a reporting station to the west of you because 24 hours later, those winds will have likely moved to your location.

Call FSS the morning of the launch for current winds aloft. You can then get a pretty good idea of where it's going to go so your chase crew can position themselves accordingly.

Call the FSS as soon as you launch and give them your estimated climb speed. They probably won't need to hear anything else from you until the balloon goes above 60,000 feet. Once above 60k, you're in uncontrolled airspace and the FAA doesn't have to worry about you, so tell them when you pass 60k. Call them again when you descend below 60k and when you land.

The Launch Mechanics

First of all, you need to know how much gas to put into the balloon. What you want is enough gas to lift the balloon, your payload, radar reflector and parachute plus six ounces to one pound of extra lift. One pound of extra lift will give you about a 1000 foot per minute initial rate of climb. This will give you about a 2-3 hour ride to 100,000 feet. On a very calm day with slow winds aloft, you can put in six ounces of lift and get a longer trip up and more usable time at high altitude. Here's the WB9SBD method of achieving the desired amount of lift:

1: Construct a simple scale by suspending a strong rod from a rope tied around its middle.

2: Hang your payload, parachute, radar reflector, suspension cables and EVERYTHING else that will fly EXCEPT the balloon to one end of the rod.

3: Hang a one or two gallon plastic jug from the other end of the rod.

4: Fill the jug with water until the rod is balanced.

5: Add six ounces to one pound of extra weight to the payload end. (Hint: bread comes in one pound loaves - a WB9SBD discovery)

6: Add enough water to balance the rod again.

You now have a jug of water that weighs exactly as much as what your balloon will have to lift plus 6 to 16 ounces extra.

FILLING THE BALLOON

Fill the balloon indoors or in an area that's very well protected from the wind. You don't want to have to fight the wind because the

balloon is very fragile and it will burst. Look for an old barn or airplane hanger. Be aware that the balloon will just barely clear a barn door when it's filled. A home garage door isn't high enough.

Spread a tarp on the ground to protect the balloon and spread the balloon out on the tarp. Handle the balloon with gloves.

Lay the gas tank next to the balloon. (It can't fall over if it's laying on the ground.) The regulator manufacturers recommend that you crack the valve slightly to blow out any dust before screwing on the regulator. Be aware that the threads on hydrogen tanks are "backwards" - you turn them counter clockwise to tighten them. (This gave me a bad moment on my first solo launch.) Run a hose from the regulator to your filling adaptor.

THE FILLING ADAPTOR: This is a piece of plastic tubing wide enough to be a snug fit into the open end of the balloon - 1.5 to 2 inches should do it. PVC pipe is fine. Somehow neck the other end of that tube down to the point where you can attach the hose from the gas tank to it. Also put a hook on the tube - perhaps by epoxying a piece of coat hanger wire to the side of the tube, near the end where the hose attaches. Now tie some twine from that hook to the jug.

Start the gas flowing and the balloon will start to inflate. Try not to get any air into the balloon, especially if you're using hydrogen! When the balloon lifts off the ground, the jug of water will keep it from going anywhere.

Continue to fill the balloon until the jug _just_ lifts off the floor. You now have enough gas in the balloon to lift your payload, parachute, radar reflector and connecting cords plus the extra six to sixteen ounces of water you put in the jug.

Sealing the balloon: using heavy twine, tie the balloon neck off tightly above the filling adaptor. Remove the adaptor. Tie the neck again, four to six inches below the first piece of twine. Tie your payload cord to the neck between these two pieces of twine. Now bend the neck over double and tie it again, twice. You will now have the neck of the balloon bent over double, with the payload suspension cord nestled in the bottom of the bend and the whole thing securely tied. You're ready to launch. (You can use tie-wraps instead of twine if you wish, but they're heavier.)

IS EVERYTHING TURNED ON?

Check now! Is your transmitter transmitting? Can you talk through the repeater? Is your GPS sending data? Is your audio beeper beeping? Is your IDer IDing? It's best to have a checklist because you will feel _very_ foolish if you launch with something turned off! (Don't ask me how I know this.)

The Launch

Take the balloon outdoors with somebody else carrying the payload and parachute. Stretch the payload out downwind from the balloon, with somebody holding it. You can then just release the balloon or let it out hand over hand until you're holding the payload, then let go. It's best if people hold the payload, parachute and radar reflector to keep them from being dragged along the ground. Now call FSS and let them know you've launched.

The End

Oops, deadline's up and this has to go out. I remind you once again that this is version 1.0 of the BALLOON FAQ. I promise you that I've left things out and made mistakes. If you have additions, corrections or criticisms, please send them to:

I think it won't.

Most "major businesses" like IBM and General Motors have a Public
Relations department for such "market targeting." There are usually
specific personnel policies to discourage individual employees from
engaging in "public advertisement" of the company. Ever see a .sig
with a disclaimer about not speaking for one's employer? :-)

"Corporate entities" are usually pretty paranoid about offending
people, and advertising in newsgroups tends to offend many people.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 FEBRUARY AND FORECAST FOR 02 FEBRUARY - 04 FEBRUARY

1A. SOLAR SUMMARY
Activity: moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/-- 0906UT none
M1/-- 0932UT none

Observed 10.7 cm flux/Equivalent Sunspot Number : 87/30

GOES satellite data for 31 Jan
Daily Proton Fluence >1 MeV: 1.5E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.2E+08 (high)
X-ray background: B3.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Feb 03 Feb 04 Feb
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Feb: 84/26
COMMENT: A Type II burst occurred 0844-0847UT, without an
accompanying optical flare. The region that produced the M1 flares
will rotate around the west limb today.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 31 Jan
Learmonth 13 3323 3332
Fredericksburg 12 23
Planetary 12 22

Observed Kp for 31 Jan: 5442 3333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Feb 12 Quiet to unsettled
03 Feb 8 Quiet to unsettled
04 Feb 8 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Feb normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Feb normal normal fair
03 Feb normal normal fair
04 Feb normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
01 Feb 35 Mostly near predicted monthly values, with
enhancements of 30% from 21UT onwards. Spread F
was present during local night.

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Feb 30 Enhanced by 10-20% during the local day and otherwise
near predicted monthly values.
03 Feb 25 Near predicted monthly values
04 Feb 25 Near predicted monthly values
COMMENT: Night-time Spread F is expected for 2 Feb. Townsville
frequencies were enhanced and Hobart frequencies slightly depressed
on 1 Feb.

SB QST @ ARL $ARLB011
ARLB011 Vanity call sign order

ZCZC AG77
QST de W1AW
ARRL Bulletin 11 ARLB011
From ARRL Headquarters
Newington CT February 1, 1995
To all radio amateurs

SB QST ARL ARLB011
ARLB011 Vanity call sign order

''Vanity'' Call Sign Order Released

The FCC today released its Report and Order in PR Docket 93-305, amending its rules to provide for a ''vanity'' call sign program. The new rules are effective March 24.

Each new amateur station licensed by the FCC is assigned a unique call sign through an automated process in accordance with the sequential call sign system. To accommodate requests for specific, ''vanity'' call signs, the Commission will use a series of four ''starting gates.'' Gate One will allow a previous holder of a call sign to apply for that call sign or, where the holder is deceased, a close relative could apply, even if he or she is not otherwise eligible to hold the call sign. Gate Two will allow Amateur Extra Class licensees to apply. Gate Three will allow Advanced Class operators to apply; and Gate Four will open the system to any licensee, including a club station license trustee applying for the call sign of a deceased former holder.

The Commission will announce the opening of each gate by a Public Notice. The first gate will open as soon as the new application form, FCC Form 610-V, is available and the Commission's licensing facility is prepared to begin processing the applications.

The Commission said opening Gate One first to the small group of eligible licensees will allow for validation of their procedures and alert its staff to the need for adjustments. The following gates two through four will be opened sequentially ''at such times as it is clear that the system is ready to accommodate more applications.''

Applications will go to the Commission's contractor, Mellon Bank, which will accept them in Pittsburgh, Pennsylvania. They will be

processed ''in the order they are received at the processor's work station.''

Applicants will be permitted to request call signs reflecting their own or other call sign regions.

Except for a close relative applying for a deceased licensee's call sign, or a club station trustee applying with the written consent of a close relative of a deceased licensee, a vacated call sign will not be assignable for a two-year waiting period.

For clubs, persons not already holding a club station license, as trustee, must first apply for and receive a license before filing an application for a vanity call sign. FCC will begin accepting applications for new club and military recreation station licenses on the effective date, March 24.

The FCC set aside the one-by-one call sign block until the matter of assignment of these calls could be addressed in a separate proceeding. The ARRL had requested allowance for assignment of one-by-one call signs to special event stations of national significance.

A 70 dollar fee (7 dollar annual fee, for a ten-year license term) will have to be paid when requesting a new or renewed vanity call sign. The ARRL continues to work for legislation that will enable the Commission to charge a one-time fee.

Copies of the Report and Order are available from League Headquarters (SASE please). Details to follow in QST.

The response rate (less than half) was a bit disappointing (I hope I'm not having trouble sending and receiving mail from Gonix, although bounces on my end were few). Addresses that bounced were cross-checked in Mark Salyzyn's (now shared with David Horsfall) Radio Amateurs on Usenet List (see the Elmers List for more information about this valuable resource). If anyone has any information on Elmers whose mail has bounced (or who haven't responded), please write me at elmers-request@gonix.com (the default Reply-To: of this message).

To the non-respondents, I sent the following:

>Greetings fellow Usenet Elmer,
>
>Last month, I sent out an E-mail message to all Elmers on my list
>requesting them to confirm the information in their entries and ensure
>they are up to date. Many of them responded. You were one of the
>Elmers I didn't hear from.
>
>I realize that this message may have gotten misrouted, or you have been
>busy or forgotten. I also realize that the Elmers List should consist
>of voluntary participants with time to spare for Elmering. If you no
>longer wish to be advertised as a net Elmer for any reason, let me know
>and I will respect your wishes.
>
>You should have already received a current copy of the Directory and
>Index in my previous mailing (send E-mail to elmers-request@gonix.com
>if you didn't). Please take the time now to review your entry, confirm
>that it is correct, and make updates if necessary. Please also
>confirm the Index to make sure I've listed you under the right topics.
>As I noted in my previous message, I really need to confirm the
>accuracy of individual entries, but once confirmed, I won't be
>bothering the Elmers again for at least another 2 years.
>
>If I don't hear from you by March 1st, I will assume that your entry is
>obsolete and will delete it. I will, of course, be more than happy to
>reinstate it at any time upon receipt of updated information.

>I'd like to thank you for your previous contributions to the net through
>your volunteerism and enthusiasm and hope to continue having you as a
>Usenet Elmer.

I'd like to thank many of the Elmers for their prompt and
conscientious replies and continued assistance in keeping the list
accurate and up-to-date (as well as a lot of positive and informative
feedback about use of the list by the Usenet readership). As a
result, the list will remain a usable net resource for some time to
come.

Apologies to disinterested parties for this closed-circuit. This will
be my last post on the subject for at least another 2 years.

Geez, our friends in Botswana, Tonga, Bhutan and some of the Gulf
countries may not take too kindly to such unilateral action.

1378. This Week in Amateur Radio Audio Bulletin Service Moving

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 00:30:36 UTC
From: kxkvi@delphi.com
Message-ID: <56w5av0.kxkvi@delphi.com>
Source record: 252667

Begining this week, all amateur radio affiliates that carry This Week in Amateur Radio on thier local repeater or net, should look for us, and the entire Omega Radio Network, on Telstar 302 transponder 21 5.8 MHz wideband audio. Our new feed uplinks from Denver, originating in Albany New York.

At press time, we are not sure of the possibility of dual illumination with the soon to be gone Galaxy Three satellite. All affiliates should look for the feed in its usual time slot of Saturdays at 7:3o PM EASTERN time on Telstar 302

FOR THIS WEEK AND THIS WEEK ONLY: IF WE DO NOT APPEAR ON TELSTAR 302 LOOK FOR US BACK ON GALAXY THREE TRANSPONDER 17 5.8 AUDIO.

If you have any questions, please feel free to contact us at kxkvi@ delphi.com Thanks and 73!

This Week in Amateur Radio is the most up-to-the-minute audio bulletin service you can carry on your local repeater or net. We also make available during our service a FREE feed of NewsLine, and the RAIN Dial-Up, plus special amateur related features such as EZ-Sats and the Gateway 160 Meter Net Report.

We are a legal amateur related bulletin service. We run appx 70 minutes weekly, and feed via satellite. For more information on becoming an affiliate contact N2LQS at kxkvi@ delphi.com or via amateur packet.

Yeah right. Just dont, whatever you do, remind the readership over there
that if you have an Amateur Radio License you are entitled to transmit on
40 m even if your SWL neighbor is trying to listen to those little, chickenshit
non-signatory countries that do propaganda from 7.050-7.3 MHz...god help you
if you should *even* suggest that it's reasonable for hams to transmit anywhere
that the Almighty Broadcasting Industry plops their fat, money-bloated ass down
on the spectrum...even though they did *INVADE* the Amateur portion of spectrum
in a totally *ILLEGAL* manner!

Different knowledge base? Would you believe different consensual reality? ;-)
BTW- is that assmunch still the prez of the American SWL club?? The one who
told me that "..amateurs should be thrown in jail for interferring with ANY
sw broadcasting!" and "..it's a WASTE of spectrum space to let mere NOVICES
operate CW on 40m.."? Is he still breathing air?

Always remember: The SWLer is not always a friend to the Amateur! In many cases he/she will be a royal pain in the ass!

1381. Harvard HAM Stn folklore query

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 01:13:58 UTC
From: morawski@starbase.azrael.mitre.org
Message-ID: <MORAWSKI.95Feb1201358@starbase.azrael.mitre.org>
Source record: 252669

Remember the detailed story someone posted about the Harvard H.A.M
station whose call sign was the initials of its three operators, and
they appeared before congress, etc, etc? Could someone please forward
me a copy of that posting? I have a ham friend who works for C.I.S
(Congressional Information Service), and he said he could research the
veracity of the story VERY quickly with their electronically indexed
Congressional proceedings.

Thanks in advance, and PLEASE -- no flames.
If you flame me I'll just say 73s!

73,

Paul Morawski, AA3DD

1384. Tower Zoning Case UPDATE (From Long Island, NY)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 01:51:54 UTC
From: hmn@i-2000.com
Message-ID: <3gpdrq$aaf@i-2000.com>
Source record: 252770

On Wednesday January 25, 1995, The Town of Hempstead re-heard the case of Mark Nadel, NK2T and
his request to maintain his 55 ft amateur radio tower. The presentation, lead by Nadel's attorney, Peter
Mineo of Forchelli, Schwartz, Mineo & Calino of Mineola New York along with expert testimony presented
by Professional Engineer Norman Wesler, K2YEW; FCC liason Howard Liebman, W2QUV; NY State Government Liason Frank Fallon, N2FF, and Professional Engineer Dick Knadle, K2RIW. In addition
more than 150 amateur radio operators showed up to support this precident setting issue.

The testimony took almost 2 hrs. to present to the members of the Zoning Board of Appeals. After hearing
all the evidence the Board made a motion to move the case to the decision calendar. At this moment we
are waiting for a decision. It will probably be about 30 days before we hear the decision.

As of this moment this case has cost more than $20,000. R.A.D.I.O., (The Radio Amateurs Defense &
Information Organization, has been funding this case and is in NEED of additional donations.

PLEASE be generous and send all donations to :

R.A.D.I.O.
c/o PO Box 343
Williston Park, New York 11596.

You can also keep up to date on this case by calling the R.A.D.I.O. information line by calling
516-735-2500 24 hrs/day.

Again your support is needed.

Thank You

Like to hear the upside and downside of the FT-530. Best and worst features. If u have one and love it, let's hear why. If you have (or had) one and hate(d) it, let's hear from you too.

1390. Barcodes on QSL cards

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 05:14:49 UTC
From: hogant@unisys.co.nz
Message-ID: <1995Feb2.051449.11045@unisys.co.nz>
Source record: 252776

BACKGROUND:
I am a member of a the Kiwi Contest Group which competes under the calls of ZM2K or ZL2NX. Our group, of some 20 members, enters the big international contests such as CQWW each year. In doing so we end up with in excess of 10,000 QSL cards per year presenting us with daunting task to reply. Our group maintains a database of each QSO which is used to check and log the QSL information.

PROPOSAL:
We would like to propose that other groups and individuals seriously think about placing a BAR-CODE on their QSL cards. This would enable us to more automate the QSL process. At a minimum the BAR-CODE should contain the callsign, however, more thought could be given to the format. For example it could also contain, as an option, the band, mode, QSO date etc.

I would welcome as much feedback on this idea, either to me personally or back to this News Group.

To start the ball rolling, our group will be placing a small BAR-CODE containing the callsign only, on each of our new cards.

35th Lafayette Hamfest
March 10-11-12, 1995
Holidome - Holiday Inn Central
Lafayette, Louisiana

The 35th Annual Acadiana Amateur Radio Association (AARA) Lafayette Hamfest
will be held at the Holidome just south of the intersection of I-10 & I-49.

There will be commercial dealers, a flea market, technical forums, tours for
those interested in the area's attractions, the famous AARA fox hunt, and
plenty of Cajun hospitality.

The Quarter Century Wireless Association (QCWA) Cajun Chapter #189 will host
a dutch treat breakfast buffet at 8:00 a.m. on Sunday, March 12th.

FOR MORE INFORMATION:

If you'd like to find out how you can reserve swap tables, or pre-register,
or attend the V.E. test session, or anything else..... Please contact:

>
>Just trying to justify the cost of a new rig.
>

That is indeed a very important question around Southern California. I
talked with some people who have 440 equipment and aren't in the "In Crowd."
There are very few open repeaters on 440, and no one on the others will talk
to you because you aren't a member. Therefore I decided a few years ago not
to invest in any 440 equipment. I recommend 220 however, it's less crowded
and there are all sorts of open machines, FAR more than on 440 or 1200.

Just as a thought in place of the barcode stating your made, mode, signal
report
Why not have it include the following:

Call
Country
City
State
Zone (maybe)

Thid would allow a ham to have a single barcode placed on every one of his
QSL cards at time of printing. Secondly, all that would need to be added
would be the freq, mode, rst and time. Just my thoughts and opinions.

1396. QSL info on WWW: IK4LZH notes

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 08:09:42 UTC
From: Gianluca Mazzini <gmazzini@deis.unibo.it>
Message-ID: <3gq406$nh7@sirio.cineca.it>
Source record: 252632

After a week of service the server
http://promet12.cineca.it/htlzh/qsl.html
that I will organize seem to work very well (except for
networking problems and black out, hard to be solved).

A lot of OM are interesting on it and I hope that if
everyone that visit it insert at least a new QSL route the
system will be very updated. Moreover, if you have a long
QSL info list that you want insert, you can send me for an
automatic processing.
All the comment, suggest in order to improve the service
are welcome, please report all problem you found.

Finally, I wan't remark that the 'search' command must not
used with stroking call, because the stroking are reported
in information fields in order to support multiple
potential dx-spediont. The 'try' command is very interesting
to search with not complete call knowledge and help you
to complete your log. 'Try' should be used with wildcards,
as reported in the help.

Enjoy yourself using the QSL info.

Source record: 252637

In article <7740-198378402@commspec.com> richwood@commspec.com writes:
>
>Jeff,
> It would be much more accurate to say it's ONE mode requiring some
>level of mental skill. For a QSO to be interesting, any mode requires
>mental skill. I'd bet RTTY operators would insist their mode requires a
>certain level of skill, as would satellite operators and microwave
>folks.

But Rich, the act of communicating via rtty consists of taping on
a keyboard. That `skill' is not something that would take anyone
long to acquire. Satellite and microwave operating consists of
setting this knob and pushing that button. Where's the skill?
You could write out a brief set of instructions and any newcomer
would be able to operate rtty, satellite, or microwave. (The military
is very good at writing such instructions [speaking from experience].)

Note that I am not discussing the skill required to build equipment
for said modes. But so few hams build their own gear today that I shouldn't
even have to add that disclaimer. Along these lines let me include the
following with regard to a radio parts supply company going out of business:

****
Sorry to hear of another QRP supplier down the drain. Tejas dropped ham gear
and this may not be news, but it is the first I have heard about Townsend
Electronics going out of business. Here are a few words from Jim Townsend:
``We consider it another nail in the coffin of Amateur Radio. The high costs
of advertising in magazines combined with the lack of building expertise of
the average ham, has made it impossible for us to continue. The demand for
amateur radio products which have to be made by the amateur or used as parts
in radios, just is not there in enough quantity to keep a viable business
afloat in the sea of commercially available equipment. ....It is fortunate
that the QRP clubs are keeping alive the ham spirit and encouraging building
and experimentation.''
****

Sigh.

Choose a resistor of the right wattage (V^2 / R) to carry a reasonably high
current when it is put across the battery terminals.
Monitor the voltage until it falls to just below 1.1 V per cell, NO LOWER
It takes a long time before it goes down, and then it goes suddenly!

Put it on the charger as normal until it is fully charged.

Put the resistor back on again and discharge it again. Recharge it.

I have done this on occasions with the battery out of the Macintosh PowerBook
laptop computers and the battery pack for my Sony Camcorder (6.5v), with
my cordless phone (3.9 v) and with my Kenpro KP202 Handy 2m rig (13v) and
found that it usually needs two cycles but can need three.

(example - the panasonic ni-cads out of the Kenpro are marked "charge 15 hours
at 60mA - I discharged them with a 68 ohm 2w wirewound resistor across the
ten cells = 13v, about 200mA)

Best solution I found was to replace the ni-cads with Ni-MH, nickel
metal-hydride cells, which work like a dream in the camcorder and has given
no trouble in the Handy.
(Actually "Varta" batteries. They do the Sony battery pack and the individual
cells in their program.)

To all radio amateurs

SB SPCL ARL ARLX011
ARLX011 Morse champ dies

Harry A. Turner, W9YZE, died December 21, 1994, in Alton, Illinois. He was 88 years old.

While in the service in 1942, OM Turner was clocked at 35 wpm using a hand telegraph key, said William J. Garrett, KB8NTE, of the Morse Telegraph Club, a record still standing and recorded in the current Guinness Book of Records.

According to a 73 Magazine article in 1976, Turner in 1964 applied to the Signal Corps for certification of his code speed record, which had been witnessed by General Ben Lear, and got it. Turner said he handled code under ''business'' conditions and learned to concentrate accordingly.

Among Turner's survivors are his wife, Edith.

>>IC-735 transceiver. According to the ARRL archives, there has
>>never been one in QST. However, if anyone knows of a review on

>It was in one of the 1986 issues of QST.

Ignacy, thank you. You are indeed correct. I downloaded the ARRL
list of QST articles on Icom equipment (icom.txt) and it was remarkably
small, which I found curious given Icom's popularity over the years, and
it didn't include a IC-735 review. This led to my original post.

Following your response, I went back into the ARRL Master Index and
downloaded prodrev.txt which lists all of the Product Reviews, and voila!
there were a *lot* of Icom reviews. So, it appears that the ARRL file
icom.txt is incomplete in regards to listing everything in QST about
Icom (kenwood.txt is a much larger file and lists a lot of Product Reviews,
so I suspect that it is correct although I haven't checked its listings
against prodrev.txt for accuracy and completeness).

Anyone wishing to find specific articles might be well-advised to
cross-reference to other textfiles, if available, which may carry the
same info, to ensure that a desired article isn't overlooked because it
was inadvertantly left off of one list. Probably a good task for someone
at ARRL HQ to do a cross-reference check for errors and/or omissions.
;-)

BTW, the IC-735 Product Review is in the January 1986 QST.

The 1995 version of the University of Maryland Amateur Radio Association will be having a potluck dinner in late February and wishes to invite all hams who have been involved with W3EAX, the U of MD's club station.

If you were involved in the radio club, or know someone who was, PLEASE have them get in touch with me as this will be a REALLY good time (we hope) for all.

P.S. It will be held in the suburban Maryland about 10 miles from campus.

Indeed... Besides, 40m & 80m have had lots of activity in the Novice bands
this week...I've prolly worked 30 guys in the NR so far. We've even had
NR spots on the local cluster! Annoying to some, but I still think it's
great.

Well, David, I expect your Land Rover is made considerably differently from a typical Detroit vehicle. A "welded steel monococque" indeed. :-) I'm afraid Detroit vehicles don't meet that criteria in any way meaningful to the mounting of radios. Let me give as example my 1987 Jeep Commanche.

The exposed dash is completely plastic, so the radio mounting bracket won't be connected to metal at all. The nearest body metal is the firewall, or the floor pan, depending on the exact mounting position chosen. These are parts of the main cab which is mounted to the frame via rubber bushings. The firewall has a single #16 wire bonding it to the frame. All parts are painted before assembly.

When I bought the truck, I noticed that the instrument lights would dim in time with the turn indicator. Investigation showed that the instrument cluster was "grounded" to the firewall by a single #16 wire. The firewall connection used a star washer to bite through the paint on the firewall, but not very well. After some sanding,

I got a better bond, but the instrument lights still dimmed a bit when the turn indicator illuminated. Further investigation located the single #16 wire that connects the cab to the frame. It too used star washers to bite through the paint on the firewall and on the frame. More sanding got good connections at both of those points. Now the instrument lights wouldn't dim in time with the turn indicator, but still dimmed when the AC blower started. Replacing the #16 wire from cab to frame with a heavy copper strap, bolted at each end to cleanly sanded points, finally stopped that problem.

Now I'm not a "horn" driver, so I didn't blow the horn for the first 6 months I owned the truck. My uncle, who is a "horn" driver, asked what the horn sounded like, so I attempted to give it a test. All I got was a mournful little "meep". After a good deal of hunting, I found the horn, bolted to the frame behind the front bumper. To get to it, I had to remove the bumper. Anyway, paint again. After sanding the mating surfaces, the horn would emit a strong "BEEP".

Now the service light under the hood burned not at all. After checking the bulb, and the +12 volt lead, and finding them in order, I measured the resistance from hood "ground" to the battery negative. It was several thousand ohms. You guessed it by now, *paint* again. Sanding, and a couple of copper straps around the hood hinges, fixed that.

Now the entertainment radio emitted strange "pops" from time to time. Getting wise by now, I checked the resistance from fender to the entertainment antenna coax shield, over 500 ohms, but varying when beat upon. Ah, more paint.

[Note: the truck started and ran fine. Investigation showed that the battery negative lead attached via the same *unpainted* bolt to the frame as the engine block ground strap. The bolt carried the current, not the frame.]

Meanwhile through all of this, the 2 way radios worked fine because they used the "2 wires makes a light" philosophy and were wired directly to the battery via two fused heavy leads. I don't recomend using "chassis" as a path for any electrical current demand in a vehicle unless you own a body sander and stock in a star washer company.

I looked and looked for an appropriate newsgroup, but just couldn't find one :)

Besides, my experience has been that if there is a group of enthusiasts who happen to be Internet experts, it's hams.

Anyway, my question is this: how do I go about creating a new NewsGroup? Being one of the few in our family with Internet experience, I was asked to create a Newsgroup to accomodate my sister (and her many friends) who are Paragliding enthusiasts. I gave my Internet book to someone for Christmas, and now I'm stuck.

Please Email any advice.

Thanks, 73's

In Britain, it is illegal to listen to these things. The penalties
are rather large and/or long. Of course, such a crime is virtually
undetectable unless the perpetrator is either seen doing it, or in some
other way reveals that he has done it, perhaps by posting it on a public
forum ?

One police force used a spoof message (a flying saucer report!) over
its radio system, then sat back and arrested all the scanner toting
fools who turned up at the reported location :-)

Radio users are fast turning to encrypted systems for anything
of any importance, so, if you do try listening, it will likely prove
boring or indecipherable.

Cheers
David

Page C-6

Glocester man charged with threatening to poison reservoir
By Ken Mingis

Police said a Glocester man broadcast threats over a state-used radio frequency to bomb and poison the Providence-owned Scituate Reservoir system -- then was arrested at his home yesterday after he used his HAM radio to identify himself and declare that the threats had been a "mistake".

Steven P. Savoie, 26, of Snake Hill Road was charged with making threats or false reports of bombs being placed, and was released pending District Court hearing, state police said.

Mayor Vincent A. Cianci, Jr. said there was no apparent motive for two threats Savoie, using phony accents, made -- the first, on Tuesday, to explode bombs at reservoir facilities, and the second, yesterday, to dump cyanide into the Providence-owned reservoir system.

"I believe he thought it was a joke", Cianci said.

After the threats, security at the water system was tightened and Cianci yesterday held a televised news conference to disclose what was going on.

A short while later, Savoie allegedly broadcast that the earlier threats -- made on a frequency used by the Department of Environmental Management -- were mistakes, and disclosed his name and address. That broadcast was heard by DEM officials, who called state police.

Providence police accompanied state police to Savoie's home where he was arrested without incident about 2:45pm, Cianci said.

"He said he saw me on TV and didn't realize he was causing such a commotion," said Cianci.

State police Capt. Gerry Drissette said police had taken the threat "very seriously". The water system provides drinking water to about 600,000 people in 12 communities.

The mayor said media inquiries had initially prompted him to call the news conference to announce tighter security around the Scituate Reservoir and three smaller reservoirs in Cranston, Johnston, and North Providence.

In addition, Providence Water Supply Board officials were testing the water every hour to ensure it was safe to drink. Tests are ordinarily done twice daily.

Cianci said a man who called himself "Ahmad" Wednesday broke in on a radio frequency used by DEM and threatened to explode canisters of cyanide that he said were at the reservoir if his demands were not met.

Officials from the Federal Communications Commission were alerted because using the airwaves to broadcast threats could lead to federal charges, Cianci said.

The reservoir contains "billions" of gallons of water, according to Richard Rafanovic, general manager of the water supply system. It would take tons of cyanide to fully contaminate it, he said.

You have to wonder: This guy was stupid enough to open his mouth. Had he not, would they have every found him? Probably not.

1414. TX 150 to 154mhz range?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 17:03:01 UTC
From: P22407@email.mot.com
Message-ID: <1995Feb2.172608.20328@schbbs.mot.com>
Source record: 252654
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am running a chase vehicle for a off-road race team. I perfer NOT to pay the inflated prices race-radio companies charge for inferior equipment. I instead would perfer to get my licence and buy a radio I can also use for 2-meter. Here are some questions:

Can a good 2-meter radio (Kenwwod, Icom, etc.) be modified to transmit in the 150 to 154mhz range? Do I need a permit (you dont even need a licence to use a race radio!)?

What is MARS/CAP use?

If I get a handheld, can I get an amp that operates on 12vdc to boost my signal? In a typical race, the car may be as far away as 50+ miles over rough terrain.

Can a 2m base station antenna be easily tuned to 152mhz?

Thank you in advance for any advice in this area. I have contemplated getting into amateur radio for a long time, and this may just push me in!

There are also CW alphabets for each of these. Check a recent copy of the ARRL Handbook.

Hello to all.

This is to announce the availability of the following black and white scanned logos: ares, arrl, nts (National Traffic System), and ssc (Special Service Club).

These images are in GIF (Graphical Interchange Format), and are available on the Boston Amateur Radio Club's anonymous FTP area on oak.oakland.edu.

The complete path is:
oak.oakland.edu:/pub/hamradio/arrl/logos

There are two versions of each file, as the README file explains.

Some programs may interpret one image as a 'negative', or white logo on a black background. The other gif is the 'positive' version.

The logos are names as: arrl1.gif, arrl2.gif, ares1.gif, ares2.gif, ssc1.gif, ssc2.gif, nts1.gif, nts2.gif.

The images were scanned as black and white, full-size, from the originals (supplied by the League).

If you have any questions about the images, please let me know.

73,

So, what was this guy's "HAM" call, so we know that he is one of the
evil "no coders?" I fail to see the connection. As we all know,
the press often describes anyone with a transmitter,or lately even a
scanner, as a "HAM operator." Even less credibility when the
word is shown in caps. He is most likely not a no-code ham, but
what we used to call a bootlegger. They should have called him a CB'er:-).

>"mistake".

etc, etc.

Please provide a follow-up post which answers the following
questions:

1. How do we know that this person held valid amateur license?

2. How do we know that his "broadcast" of admission of guilt was
made on an amateur frequency?

3. Why would government officials monitor an amateur frequency,
which they apparently did in this case since they overheard his
admission of guilt?

4. Assuming that this individual was a licensed amateur, and did
in fact "broadcast" on an amateur frequency to admit his guilt,
how do we know what class of license he held?

Given the number of *EXTRA CLASS* licensees who have been
fined and/or had licenses suspended or revoked for everything from
VEC exam cheating to willful interference to threatening other
hams and/or FCC inspectors, all in the past couple of years, why
do you imply that we suddenly have this severe problem brought
on solely because someone can get a license without passing a code
test?

1420. Icom R-7100 Transceive Function???

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 17:54:33 UTC
From: galen@picea.CFNR.ColoState.EDU
Message-ID: <3gr68p$2s5c@yuma.ACNS.ColoState.EDU>
Source record: 252660
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

In the manual for the 7100, it states there is a 'Transceive' function, which I assume mutes the 7100 when you transmit. The manual sez how to able/disable the function, but doesn't say how to actually make the 7100 mute or whatever.
I just got off the phone with Icom, all the tech help could do was recite what's in the owners' manual, and they didn't seem to have a clue as to how you actually use the function on the 7100.

Does anybody, or do I have to call Japan????

What I want to do is use my Icom IC-726 transceiver to drive a transvr, and use the 7100 as the RX, having it mute when I TX on the 726. There's no 'RX MUTE" jack or anything remotely similar on the 7100. I get the feeling I'll have to put both on the CI-V system and dedicate a computer to do my TX/RX switching.

Great help from Icom Technical, NOT!!!!!
Galen, KF0YJ

Pardon me, but how do we know he was one of the evil no-coders? And so what if he was - any causality between no-codesmanship and criminal behavior has hardly been demostrated in this case. I think that it is a long stretch to impute proclivity for criminal behavior to no-code entry.

"Legacy," schmegacy--I am personally offended.

The following is a QST

A tower case in New York, the unlicensed are named in the
United Kingdom and paging world-wide. Truly an international
edition of Newsline coming your way right now.

(*****
TENTATIVE L.I. TOWER ACCORD REACHED

Mark Nadel, NK2T says that his ongoing problems with the
township of Hempstead, New York are almost over. This as the
result of an accord reached on Wednesday January 25th between him
and Hempstead's Board of Zoning Appeals.
By way of background, Nadel is the New York ham who filed suit
against Hempstead in Nassau Supreme Court after the Zoning Board
continually rejected his application for a variance to maintain
his fifty-five foot high transmitting tower. This, even though
the same board had approved an almost identical installation in
nearby Merrick back in 1989.
With the assistance of Senator Alfonse D'Amato and
Representative Peter King, Nadel brought the situation to the
attention of former FCC Private Radio Bureau Chief Ralph Haller,
N4RH. As previously reported, last October 25th Haller intervened
in the case by sending the Zoning Board a letter. It told the
board that local authorities may not base their regulation of ham
radio antenna structures based on the possibility or actuality of
interference to neighboring consumer electronic instruments.
This, Haller said is the singular purview of the federal
government as administered by the FCC.
The Haller letter is credited with having a profound impact on
the Zoning Board and is credited with helping to bring about this
meeting.

(*****
VANITY CALLS HERE!

The FCC has announced its intention to implement a vanity call
sign program, and also to resume the issuance of club and military
recreation station licenses. In a January 24 news release, the
Commission released a general outline of the new program.
Amateurs will be eligible to apply for a call sign of their
choice in four "gates." The first group eligible to apply will
be previous holders of a call sign or the close relative of a
previous holder of an amateur call sign who is deceased. The
second group will be Amateur Extra Class licensees, then Advanced,
then all others. The FCC will announce the opening of each
"gate" by public notice.
The FCC said that the first gate will open as soon as a new

application form, FCC Form 610-V, is available and the Commission's licensing facility is prepared to begin processing the applications, no sooner than April, according to FCC staff. Applications for club station licenses will be accepted as soon as the FCC's Report and Order on this matter is released. Club station call signs will be issued systematically, unless under the fourth "gate" the trustee of an existing club station applies for the call sign of a deceased member as a vanity call sign for the club.
The fee for the use of vanity call signs will be 7 dollar(s) per year, or 70 for dollar(s) a ten-year license term, according to Wireless Telecommunication Bureau staff. However, on January 12, 1995, in a notice of proposed rule making, the FCC proposed a fee of 3 dollar(s) per year, for fiscal year 1995 (which began October 1, 1994).
Amateurs will be able to list up to 25 call sign choices, from any call area, FCC staff said. It is expected that it will be several weeks before the new form 610-V is approved.

(*****
ARRL HACKED ON THE I-NET

The ARRL has been hacked on the Internet. The League says that a message claiming to be W1AW Official Bulletin falsely states that the American Radio Relay League plans to petition the Federal Communications Commission to drop all Morse code requirements for all Amateur Radio licenses in the United States.
The league says that an authentic ARRL Bulletin numbered ARLX004 was apparently altered and re-posted on an internet newsgroup. From there it has quickly spread worldwide.
But the League has no plans to file any form of no-code expansion petition. It says that the real ARLX004 concerned a balloon launch from Iowa.
The ARRL adds that it views the dissemination of forged Official Bulletin as an extremely serious matter, but stops short of saying what action it will take if the person who posted the phony message is found.

(*****
REVOKEES TO BE ANNOUNCED

On the regulatory scene, Great Britain's Radiocommunications Agency has announced that they will begin to publish details of those whose amateur licenses had been revoked. Until now this information has been regarded as confidential. The agency says that the decision to make public will be a deterrent to others thinking of breaking the radio regulations. It says that publication will make other hams aware that license revocation and a ban on use of ham radio communications is a punishment that the government feels is applicable for some egregious offenders.

(*****
CEPT AGREEMENT

Also from overseas, another international ham radio licensing agreement has been signed. Word that Estonia, Israel and Turkey have signed the CEPT agreement.
This arrangement permits temporary amateur operation in those countries without additional paperwork. Twenty seven countries have so far implemented the CEPT pan-European licensing scheme.

(*****
NEW 10 GHz RECORD

A new ham radio microwave record is set. Roger Bowman, VK5NY, and Walter Howse, VK6KZ, have claimed a new world distance record on the amateur 10-GHz band.
On December 30, 1994 Bowman and Howse claim to have worked over a path of 1911 kilometers. Both operated portable with one near the city of Adelaide and the other near Perth. VK5NY used 180 milliwatts to a 400-mm dish. VK6KZ ran 100 milliwatts to a similar antenna. The 2-way contact was on SSB phone.

(*****
GLOBAL PAGING

Federal regulators have cleared the way for a new national and, eventually, global satellite service offering an array of two-way communications including phone and fax.
Unlike conventional satellites that orbit thousands of miles in space, the new service uses satellites that orbit close to the earth. The orbit is low enough for people on the ground to use special hand-held phones and other devices to send and receive calls, messages, pages and other services.
After nearly five years of work, the Federal Communications Commission completed a plan on how companies may provide the service. Specifically, the commission, with the help of industry, resolved how public airwaves will be shared among companies.
According to the Personal Communications Industry Association, 4 million Americans, that's 1.4 percent of the U.S. population, will subscribe by 2003 to satellite delivered communications services.

CHALLENGER REMEMBERED

The Chattanooga Amateur Radio Club will be operating a special event station from the new Challenger Learning and Teaching Center of Chattanooga. This from 11:00 UTC on January 27th until 21:00 UTC on January 28th.
The station will sign the call W4AM and operate near the middle of General class phone bands on 80, 40, 20, 15, and 10 meters, as well as locally on 2 meters and 70-cm simplex.
The Learning Center is named for the space shuttle Challenger

and its seven astronauts who perished in a launch accident back in January of 1986. The club hopes to attract young people to their station and into the hobby during the center's opening.

(*****
WATCH FOR MIR

Shuttle STS-63 the Mir rendezvous flight is scheduled to launch February 2. The shuttle will fly up to Mir, but will not dock. And it just so happens that Mir will be visible in the morning sky over much of the U.S. during this flight.
Normally the shuttle's exact flight path is not known until after it has launched. However, Mir's orbit is well established and should remain stable from now until the end of the STS-63 mission. Since the shuttle will fly to Mir, we only have to track Mir to tell us where to look to see both spacecraft.
According to AMSAT's Dave Mullenix, N9LTD, the best way to be ready for this space spectacular is to start right now. You'll need a tracking program that can check for visible passes. For a satellite to be visible, it must be above your horizon and in sunlight while you are in darkness on the ground. Since Mir and the Shuttles are both fairly large objects in low earth orbit, the two of them flying in formation should be a beautiful sight to watch and possibly to photograph.

(*****
DX

In DX, word from Botswana that A22MN, will be leaving in February. Dave will move on to Finland where he will be there for the next 3 - 4 years. Meanwhile he has been trying to work stations on 80 and 160 meters. He is reportedly upset because the same individuals keep calling him on these bands and they are not giving other stations a chance to work him as an new one. Please QSL only to manager WA8JOC and not direct to Dave.

(*****
BHM E-MAIL

And finally, unless you've been asleep for a few years, you've already heard plenty about the information superhighway. It seems that everybody has their own E-mail address these days. In fact, we here at Newsline have not one, but a half dozen. Now, an Alabama amateur radio club is taking what may be the first step of its kind onto the superhighway. The Birmingham Amateur Radio Club has set up its own E-mail address for Hamfest information. Bill Levey, WA4FAT, helped arrange the Club's Hamfest address on America On Line.
If you'd like information on the Hamfest, here's the Club's E-mail address. Send inquiries to Birminghamfest95@AOL.COM.
By the way, the BirmingHamfest-95/Alabama Section Convention is set for May 20th and 21st. And get ready. You can just about bet

that more amateur radio clubs will follow suit by jumping on the superhighway with their own E-mail addresses, as well.

(*****

And for this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 660937, Arcadia, CA 91066.

1426. FCC Vanity Call Sign Plan is Released

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 18:59:00 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9502021859.AA02187@tix.timeplex.com>
Source record: 252674

Report No. DC95-19 ACTION IN DOCKET CASE January 24, 1995

COMMISSION AMENDS AMATEUR SERVICE RULES TO IMPLEMENT
A VANITY CALL SIGN SYSTEM
(PR DOCKET NO. 93-305)

In recognition of the strong sense of identity among amateur operators that is grounded in the call signs of their stations, the Commission has decided to offer a vanity call sign system to the amateur service community. The Commission will also resume issuing new club and military recreation station licenses. The Commission said these actions are fundamental to its commitment to putting the needs of people first in providing the services that they want.

Each new amateur station licensed by the FCC is assigned a unique call sign. An automated process selects the call sign in accordance with the sequential call sign system. Until recently, the Commission was unable to accommodate the many thousands of requests from call signs of the licensee's choice. The Commission stated that one of its many steps in reinventing Government is to implement new licensing processing capabilities that make it practicable to grant such requests.

The Commission will implement the new system by using a series of four "starting gates." Gate One would allow a previous holder of a call sign to apply for that call sign or, where the holder is deceased, a close relative could apply. Gate Two would allow the 66,000 Amateur Extra Class operators, who have passed the most difficult license examinations, to apply. Gate Three would allow the 112,000 Advanced Class operators, who have passed the second most difficult license examinations, to apply; and Gate Four would open the system to any licensee, including a club station license trustee applying for the call sign of a deceased former holder. The Commission will announce the opening of each gate by a Public Notice. The first gate will open as soon as the new application form, FCC Form 610-V, is available and the Commission's licensing facility is prepared to begin processing the applications.

With respect to new club station licenses, the Commission stated that persons not already holding a club station license must first apply for and receive a license before filing an

(over)

application with the fee collection contractor requesting that the license be modified to show a vanity call sign. However, the Commission will begin accepting applications for new club and military recreation station licenses on the date the Report and Order in this proceeding becomes effective.

Action by the Commission December 23, 1994, by Report and Order (FCC 94-343). Chairman Hundt, Commissioners Quello, Barrett, Ness, and Chong.

Source record: 252675

I have not done any recent reading on this topic, but there is a theory that I have not heard much about. When you discharge a multi-cell battery pack all of the way, some cells will discharge before others. Continuing the discharge will begin reverse charging the dead cells by the good cells. I think this is what may lead to the short condition of some cells.

It may be best to discharge a multi-cell pack only until the voltage drops off by 1.2 volts or so which indicates that one cell has completely discharged. Stop the discharge at that point.

A solution to that problem would be to put diodes across each cell to prevent reverse charge. I have never seen that done, but I have done it to a piece of equipment here. It did not get enough use to test the theory.

>
>But Rich, the act of communicating via rtty consists of taping on
>a keyboard. That `skill' is not something that would take anyone
>long to acquire. Satellite and microwave operating consists of
>setting this knob and pushing that button. Where's the skill?
>You could write out a brief set of instructions and any newcomer
>would be able to operate rtty, satellite, or microwave. (The military
>is very good at writing such instructions [speaking from experience].)

Gee, Jeff, I guess the effort required to tune a RTTY system on the correct frequency, run the correct data level, and figure out which data speed, shift and encoding (ASCII vs Baudot) are in use count for 0.

As for satellite, I suppose the ability to determine the correct uplink and downlink frequencies, correct for inverted passbands, correct and track Doppler shift, and verify the correct power level is in use counts for 0.

Then comes microwave. Since most of the microwave enthusiasts I've talked to have to build most of their gear, either from surplus pieces or entirely from scratch, you can't discount the skill required to build equipment. Then comes the ability to aim an antenna with a very, very narrow pattern (in three dimensions!) at some distant point you can't even see, based on coordinates. Then maybe the hook-up has some funky IF frequency with inverted tuning, etc., etc.

Amateur experimentation on microwave is not the plug/play stuff the military pays for. Try asking Zack Lau....

>Note that I am not discussing the skill required to build equipment
>for said modes. But so few hams build their own gear today that I shouldn't
>even have to add that disclaimer. Along these lines let me include the
>following with regard to a radio parts supply company going out of business:

Of course, as I point out, microwave experimentation virtually
requires the construction of equipment.

The bottom line is this: naively denigrating operators of modes other
than CW does nothing, nothing at all, to point out any advantages of
CW. The assertion "CW is the only mode that requires skill" suggests
the speaker has not operated RTTY, satellite or microwave at all, and
therefore brings into question the validity of the original assertion.

I'm not certain how denigrating other radio amateurs helps build
up the amateur radio service, anyway.

Hello,

I'm considering purchasing a W-braced type crankup tower and am interested in your personal experience (good or bad) installing, maintaining and using a crankup. I'm especially interested in gotchas with installation. Unlike sectional towers (25/45G) I can see potential problems in getting 800-1000 pounds of steel from horizontal to vertical.

Based on what you've seen or used, do you have a preference on a manufacturer (US Towers, Hygain ... etc)?

Regards,

Steve Mesko

Hi Rick.

I purchased an Alford Slot from WB0QCD a while back. It took over 6 months for the antenna to arrive, even though it look just a few days for QCD to cash the check sent with the order. We never received antenna plots with the antenna, but had the antenna tested on a professional antenna range. In short, the performance is LOUSY, and is not as advertised.

WB0QCD's version of the Alford-Slot is a 2 wavelength vertical slot cut into a 4 inch diameter pipe that's fed in the center of the slot. Tests seem to confirm better patterns can be achieved with a 3 inch diameter pipe.

now, this IS interesting.

for all intents and purposes radio call districts haven't had much meaning since the late 70's.....there are some guys here that probably would love to get their old zero calls back again (one moved here just before the rules changed and another messed up an let his license lapse and was issued a new call in sync with the current system...)

here we'd been thinking along the like of W4MLB, K4MLB or similar and instead we could use any call district...humm...

Greetings:

I have a very nice Motorola mobile speaker I'd like to attach to a car-mounted scanner (RS PRO-2026). The trouble is (or may be) that the input impedence for the speaker is 2 ohms and the output impedence for the scanner is 8 ohms.

Is this going to cause any problems for either the radio or the speaker? It seems a fairly common practice to connect 8-ohm-output-impedence radios to 4-ohm speakers.

Please e-mail me at johnnie.martinez@hyperion.lanl.gov

Thanks.

DX Bulletin 5 ARLD005
From ARRL Headquarters
Newington CT February 2, 1995
To all radio amateurs

SB DX ARL ARLD005
ARLD005 DX news

This week's bulletin was made possible with information provided by Leo, JI1DLZ, Tedd, KB8NW, Denis, EI6HB, Joe, NJ1Q, Peter, ON6TT, Rudi, DJ5CQ, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

BHUTAN. Four Japanese amateurs have been operating three stations simultaneously since February 1 as A51/JH1AJT. They have been spotted on 14030 and 14195 kHz on the east coast PacketCluster network.

CONWAY REEF. A group of four amateurs plan a major, two weekend effort from March 24 to April 3, including working the CQWW SSB WPX contest. Operational specifics include three separate 1 KW stations, Yagis for the higher frequencies and verticals for the lower bands. Ops to date are SM7PKK, OH1RY, SM6CAS and NI6T. One more operator is being sought.

Listen for their CW on 1823, 3503/3523, 7003/7023, 10103, 14003/14023, 18071, 21003/21023, 24893 and 28023 kHz. For SSB try 1843, 3785, 7085, 14195, 18115, 21295, 24935 and 28495 kHz. And for RTTY try 7030/7082, 10120, 14082, 18100, 21082 and 28082 kHz.

QSL SSB contacts via Philip Marsh, G4WFZ, Orcheston Road 28, Bournemouth, BH8 8SR Dorset, Great Britain. QSL CW and RTTY QSOs via Mats Persson, SM7PKK, Zenithgatan 24 5, S-212 14 Malmo, Sweden.

ETHIOPIA. ET3BT has been checking into the 14226 DX Net around 1830z. QSL via Box 6128, Addis Ababa, Ethiopia.

DJIBOUTI. J20UFT, was active over the weekend on 20 meter RTTY. He mentioned the CBA for his QSL Manager F5LBM is incorrect. The correct address for F5LBM is Patrick LaBeaume, 38 Chemin Du Plateau,

67500 Hagueneau, France.

ANDAMAN ISLANDS. VU2JPS is active only on 40 meter SSB, but may get on other bands soon. Check 7060 kHz around 0200z and 0730z. QSL via VU2JPS.

MOUNT ATHOS. Apollo, SV2ASP/A, was working stateside recently on 18140 kHz between 1315 and 1345z.

EAST MALAYSIA. Peter, PB0ALB, AKA KC4VDE, is expected to be on soon from Sarawak as 9M8PFB and operate until March 8.

CHRISTMAS ISLAND. DJ5CQ, DL8WPX and DL3DXX should be on the air soon as VK9XY. QSL via DJ5CQ.

COCOS KEELING. After their Christmas Island stint, our German friends will sign VK9CR from February 8 to 17. They will return to Christmas Island and operate VK9XY from February 18 to 21.

PHILIPPINES. Tom, SM0CNS, is signing SM0CNS/DU7 again. He continues to be active on 1827 kHz around 1400z and again from 2000z until his sunrise at 2200z. QSL via Thomas Bevenheim, Villa Sea Q, Ronda, Cebu Island 6034, Philippines.

SPRATLY ISLAND. Bobby Garcia, DU6BG, President of PARA, the Philippine Amateur Radio Association, will be leading an all Philippine team to activate DU0K on all bands and modes from April 10 to 16. Apparently no foreign operators will be allowed because of security reasons. QSL via DU9RG.

SOUTHEAST ASIA DXPEDITION. JA2EZD will sign from Thailand, Laos, Vietnam and Singapore starting around February 10.

ANTARCTICA. Brian, KC4USB, will be active from Byrd Surface Camp until February 10. Check 14270 kHz after 0030z daily. Henry, KC4USX, is on from Williams Field daily around 14270 kHz after 0300z. KC4AAG is at a new base at Terra Nova Bay and also frequents 14270 kHz after 0300z. QSL all three stations via K4MZU. Eddie, VI0ANT, is active from Davis Base. Listen for his 40 and 20 meter CW. QSL via VK4EET.

QSL UPDATE. Cards for EI7M go via the EI QSL Bureau c/o EI6HB, or direct to Denis O Flynn, EI6HB, Ladysbridge P.O., Ladysbridge, Castlemartyr, Co. Cork, Ireland.

THIS WEEKEND ON THE RADIO. State QSO parties abound this weekend. Your menu consists of the Maine, New Hampshire and Vermont QSO Parties. For digital mode types, try the ADRS WW RTTY WPX Contest. The phone half of the North American Sprint and Ten-Ten International Net Winter QSO Parties round out this well balanced menu. For details on these events check page 127 of January QST.

I've got the US Towers standard duty 55 foot and am very pleased. If I
did it over again I'd probably do the same. Thought about getting the
heavy duty but it's a lot more money. The US is a lot heavier than the
Hygain for the same height.....so I opted for the US. Order the raising
fixture with it...really neat to be able to service it all by yourself.
NEVER climb a crankup. If it is all the way down and the cable is slack,
there might still be a section held in a bind...not likely but make the
rule not to climb and follow it blindly.
Good luck on your installation.

Michael> he could volunteer to be a poster boy for genetic
Michael> engineering.

I'm a new ham, started out with a no-code license, and plan to upgrade to Tech Plus tonight. You sir, make me wonder if perhaps I shouldn't reconsider my involvement in the amateur radio. The amateurs I've met so far have as a rule been thoughtful and reasonable, leaping to conclusions only rarely.

Just because the individual mentioned has committed a criminal act and _may_be_ an amateur, you assume that he is a no-code technician, yet the article you site at exhaustive length makes no mention of the operator's license. Upon what do you base your assumption that the criminal amateur is the natural consequence of the elimination of the code requirement for _one_ class of operator?

Many people choose not to invest a great deal of time _in_the_ _ beginning_ on a hobby that they may or may not want to pursue. The assumption that people who choose this route are inherently evil (as one cannot help but assume from the tenor of your post) does far more harm to the growth of amateur radio than the relaxation of the code requirement for one limited-privilege license class is likely to.

If the society of existing hams is unpleasant, as comments like yours may make it, then the amateur radio service will dwindle rather than grow. May I suggest that you find ways to encourage no-code licensees in the enjoyment of CW, as AA0OS did with me? Without his encouragement, I would have remained a law-abiding no-code tech rather than pursuing the code.

Whatever your opinion, 73!

In article <D3Bopu.Dvt@ruacad.ac.runet.edu>, ddabay@ruacad.ac.runet.edu (Dave Dabay) says:
>
>I must disagree herre, don't always believe what you read!! Just
>because it is in print does NOT mean that it is in the least bit
>accurate. In the early 70's the "Internet" as you call it was born
>out of DARPA, Usenet, and several other "local" networks. It's original
>purpose, no matter what is claimed after the fact, was NOT to connect
>Universities. It's main purpose was to allow exchange of information
>between large gov't agencies and their sub-contractors, typically
>universities and such. Don't confuse the facts.

One amplification of something alluded to above: these messages are
part of USENET, which is NOT the INTERNET. It's always been my
understanding that different policies apply to the small part of the
internet that is usenet. I have no problem with IBM or any other
commercial organization sending email or files via the internet or
setting up FTP sites or Webservers or engaging in any other kind of
commercial activity on the internet. Having my tax money pay for
those activities is like having trucks on the Interstate - I can live
with it as long as they stay out of my way.

I _DO_ object to commercial messages on USENET. I don't enjoy having
my tax money used to pay for somebody to send me advertisements that
are mixed in with the legitimate messages in such a way that it's
extremely difficult to avoid them. That puts me in the position of
paying to be annoyed. If it gets bad enough, I'll say to heck with
it and stop reading the messages. Needless to say, if my congressman
then announces that dropping government subsidies to the usenet would
help balance the budget, I won't object very strongly.

After all, why pay good money so somebody can annoy you for their profit?

Perhaps we need rec.radio.commercials?

ARLD006 DXAC vote results

DXAC Votes NO on Pratas Island

The ARRL DX Advisory Committee (DXAC) voted 8 to 7 to reject a
petition to add Pratas Island to the DXCC Countries List based on
Point 2(a), separation by water.

Some of those voting against cited concerns over the possibility of
intervening rocks. Others cited what they perceived as disputed
ownership of the island.

1443. Accu-Keyer won't key IC-730

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 22:47:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A2C3EF.00CB00230E.uuout@camel.com>
Source record: 252691

I recently pulled out an old Accu-Keyer I built years ago and tried to use it with my Icom IC-720. No go. Plugging in the keyer locked the sidetone on, but the rig wouldn't key. Hitting the keyer paddles made a little AC hum come through the speaker to the rhythm of my keying, but the rig wouldn't key.

I hooked to keyer up to my ohm meter and the needle moves to dead short as I key. The rig keys fine with my straight key. Any ideas? I no longer have any documentation on the Accu-Keyer and all my manual on the rig says is be sure the keying voltage is less than 0.4 VDC. I don't read any voltage on the output of the keyer. Thanks,
Robert WD5AAT

What I discovered is that there is no longer any restriction on
the use of the net for commercial purposes.

I've been "on the net" since well before ARPA funded the initial
connectivity between commercial (not educational) users. Some of
those users WORKED at universities, but the projects which used
the ARPA backbone and the various ad hoc interconnections that
existed prior to the backbone didn't do it just for fun.

Perhaps you need to look at those books (and papers and other documents)
before you make assertions about history.

... Hank

1448. Re: Barcodes on QSL cards

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 23:37:47 UTC
From: walt@waltd.demon.co.uk
Message-ID: <791768267snz@waltd.demon.co.uk>
Source record: 252696

I feel a much more progressive approach would be to take the first steps towards eliminating QSL cards altogether! The cost of materials, printing and postages are becoming increasingly prohibitive .... and in this day and age of digital/electronic communication, the physical QSL "card" is surely obsolescent?

A sensible first step might be to establish a central database of DX-pedition and major contest logs, which could be accessed on a "read-only" basis by the ARRL's DXCC Committee - and ultimately by other interested organisations too. We have the technology ... access worldwide via the Internet would be possible. It is not beyond the bounds of possibility for checking of award applications to become fully automated .... checking claimed QSO details against the central database without the need for human intervention at all.

Obviously there would be a transitional stage of many years, during which paper records AND computerised records would have to be used. But the sooner we make a start, the better! If even just DXCC-accredited expeditions together with major contest operations were included as a first step, this would at least alleviate the need to chase QSL cards from these sources!

Food for thought?
73,

1450. Re: Second Biannual Elmers Directory Mass-Ack (Followup)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-02 23:48:02 UTC
From: pschleck@gonix.com
Message-ID: <pschleck.791768882@gonix>
Source record: 252699

Your dedicated Elmers Directory maintainer's usually sharp Unix skills failed him yesterday and caused some unnecessary mail bounces for those of you replying to my previous article. We just had a change of home-directory paths on Gonix (/u to /usr3), so I naively changed the contents of my .forward file from:

```
|"IFS=' ';exec /u/pschleck/gnu/procmail-3.03/src/procmail -t # pschleck"
```

to:

```
|"IFS=' ';exec $HOME/gnu/procmail-3.03/src/procmail -t # pschleck"
```

This worked fine for me sending mail to myself (where $HOME evaluates to /usr3/pschleck), but failed miserably for mail arriving from off-site (as $HOME will evaluate to root's $HOME, which is / :-(.

The incantation in the .forward file streams all of my incoming mail into a filtering program called procmail (which also generates the autoreplies). However, if the path isn't correct, it causes very strange bounces for senders who don't know what I'm up to.

The problem has been fixed, so feel free to E-mail me again. I apologize for this oversight and hope this won't cause my impeachment from my high office. :-)

1996 10* 9* 9* 8* 8* 8* 8* 9* 9* 10* 11* 12*
1997 13* 15* 17* 19* 21* 23* 26* 30* 33* 38* 43* 48*

Asterisk indicates predicted value. No predicted values have changed
relative to the set of T-indices contained in last month's Summary.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under class M flares. However, times of fadeouts are shown only for flares with an energy greater than X-ray class M3.

NONE.

2.1 Comments on Solar Activity.

Solar activity was at very low to low levels throughout January.

The maximum 10cm flux value for the month was 97 on 24 January. The minimum value for the month was 74 observed on 6,8 and 9 January.

The monthly sunspot number of 23.8 is very similar to that seen over the last year. Daily sunspot numbers were very low until
the 17th but a sharp rise in the second half of the month prevented a very low average value for the month.

Solar Activity During 1994:

In terms of monthly average sunspot number, January 1994 had by far the largest value. A steady decline followed in February and March to a low in April and May. After slight rises in June, July and October another low was reached by the end of the year.

The smoothed sunspot number and its estimated trend declined steadily from a value of 37 at the start of the year to around 24 at its end. This should be compared with the 158 at the last solar maximum which occurred in 1989.

Flare activity was extremely low during the year. The months of greatest flare activity were January and August; but March, April, May and November did not register a single flare. In total number of flares, the year was very similar to previous near minimum years such as 1976, 1985 and 1986.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

3-4 January Mostly unsettled to active, with one minor
storm period observed 3/06UT.

11 January Active periods during local night.

17-18 January Unsettled to active

29-30 January Active to minor storm

31 January Unsettled active

3.1 Comments on Geomagnetic Activity.

Several disturbances were observed this month. The strongest disturbance was observed during the interval 29-30 January, with a peak A index of 27 on 29 January. The above disturbances are believed to be associated with coronal holes.

Note:
From this month onwards, reported A-index information will be from Learmonth Observatory in Western Australia.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

2-3 January Depressed 15% at times during this interval

18 January Depressed 30% during daylight hours

29 January Depressed 15% after local dawn.

30 January Depressed 15-30% all day

4.1 Comments on Ionospheric Conditions.

Several ionospheric depressions were observed this month. The most significant ionospheric depression for the month was observed during the interval 29-30 January.

1452. Re: Ni-Cd "memory effect" -- how to correct?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-03 00:01:04 UTC
From: walt@waltd.demon.co.uk
Message-ID: <791769664snz@waltd.demon.co.uk>
Source record: 252701

There has been some lengthy correspondence about this subject in a United Kingdom newsgroup recently.

There is general acceptance that an apparently "defunct" Ni-Cd cell can often be rejuvenated by "belting" it in the positive direction with a pulse of DC at 1 or 2 amps. This means connecting the DC source to the cell with the positive line attached to the NEGATIVE terminal of the cell, and vice-versa (i.e. opposite to the way you would normally connect a charger.)

Be VERY careful .... do not allow this level of current to flow through the cell for more than a fraction of a second! Otherwise you could witness an explosion!! A good source of current for this operation is a lithium battery of the type often used to power miniature cameras; I have even used a car battery with a 10-ohm current-limiting resistor in series. It is sufficient to "flash" the cell, just by touching the terminals momentarily with the source leads. You will probably get quite a spectacular spark! The voltage is not critical, but 6 - 12v is suggested.

Do this with each of your "weak" cells .... just once .... then recharge them on a standard 5-hour Ni-Cd charger. With any luck, you should find them as good as new! I have rejuvenated MANY, MANY NiCd cells in this way over the years.

I have become convinced that the use of so-called "Fast Chargers" (i.e 2 hour Ni-Cd charging units) seriously shortens the life of Ni-Cd cells. It is much better to use a current of no more than 100ma for charging .... maybe even less. A five-hour charging cycle for AA-size Ni-Cd cells is reasonable. If you MUST use a fast charger, then I would recommend that you use a slow (5-hour) charge say every fourth recharge. This will at least give the cells some chance of recovering from the far-too-rapid charging cycle of the "Fast Charger".

A ham radio can't legally be used on any comerical band. All transmitters
orher than Ham band radios must be type accepted.

> What is MARS/CAP use?
>
MARS is military amature services

CAP is the cival air patrol

A ham transmitter which is modified for out of band use "MAY" have
spurious outputs on other frequencys than the desired transmit frequency.

What does a race radio cost?

Garry(WB0NNO)

I find I need to order a replacment license due to some personal stupidity,
and I went to the local ham radio store and got from them a form 610
that has a date of Nov 1993 in the lower right corner.

Now the question is: is this the correct, up-to-date form? I seem to
remember the form changing around last April, and the old ones would not
do anymore, so a Nov 1993 date sounds suspicious.

I wouldn't worry, in practise (certainly in the UK) mains frequency is pretty
accurate. Theoreticaly it is +/- 10% but in practise I think they lock it to
a standard to ease technical problems. RS Components do geared down low speed
motors. If it were *that* sensitive, I would use a quartz (or even GPS derived)
timebase with a feedback and phase comparator loop.

I appreciate the info, but I still wonder if there is any truly dynamic
source of this International Prefix info, i.e., on the internet?

I've been keeping a list of world prefixes myself, based on the published
DXCC list. However, with all the changes in the world, DXers themselves must be
getting new info on the air all the time. I'd just like to start an internet
source which keeps comprehensively up to date. Just wondered if that's been
accomplished already. :-)

Thanks for the info regarding CL being a Cuban Novice . . . fascinating!

Alan

>Is there any plans to build a 60db 2m/440 duplexer?

Im looking at my ARRL Handbook 1994 edition Chapter 14 and Page 5.
It explains the design of a 2 Meter duplexer from the theory end.

Six tuned cavities, 3 at the rcvr, 3 at the xmtr.
The cavity is 1/4 wavelength long (plus 1/2 of its diameter. etc.

Also in The ARRL Antenna Handbook (mine is 1988) there is a section on
duplexers that covers 2 1/2 pages.

I recommend you consult both sources if you want to design your own.

Here are some commercial Duplexer companies as well:

BH Electronics 403-278-2084
TX RX Systems, Inc. 716-549-4700
Telewave, Inc. 800-331-3396
Wacom Products, Inc. 817-848-4435

Hope this helps..... :<)

Sunday February 12, 1995, The Long Island Mobile Amateur Radio Club is pleased to announce their
Winter Hamfair.
The Location is the Freeport Armory at 63 Babylon Turnpike, Freeport, New York. This is a newer and
larger facility than ever before. Doors open at 7:30 am for sellers and 9:00 am for buyers.
General Admission: $6:00, Children and significant others FREE
$25.00 per table for vendors, each table admits one person.

All Vendors MUST pre-register. Call Neil Hantman, WE2V at 516-462-5549.
For general information call 516-796-2366 between 10:00 am and 9:00pm .

Amateur radio License exams will be given. Exams will be administered between 9:00 - 11:00 at the
Hamfair on February 12.

See you there.....

I my opinion the second best repeater amp on the market at the present time.. Number one of course being Milcom. Price prevents most repeater groups from using the Milcom Amp.
I speak as a member of a system in SoCal that has 9 440 repeaters, and we have gone thru the Henry's, KLM, The KLM/Mirage repeater amps. none of them hold up very well. Two years ago we started replacing the wanna be repeater amps with Dave Andersons Repeater Amps, we have not had a failure with any of the T.E. System Amps. The are performing as well as the Milcom we have. Three of our Henry Amps didnt last thru one winter, all of the Mirage and KLM Mirage failed with in two years. If you are considering replacing with a T.E. you can do it with confidence.

Holey Mackeral!! I can't believe you work for Motorola and ask questions like that.

What do you do for Motorola? Must not be anything to do with their radio division.

The company you work for makes some of the best radios in the world. I'm not sure that what you want to do with the radio is actually legal on amateur bands.

It is definitely not legal to use a amateur radio that has been retuned to the ham bands.

Good Luck,

Rick

Mains frequency in the UK is more tightly specified than that - I think
it is supposed to be better than 1%. ISTR a comment from a CEGB official
that they tweaked the frequency so that the mains clock in the power
control room was exactly right at 8am every day.

I wonder how they cope with leap-seconds? :-)

Your company makes the best land mobile service radios. If you think
they are overpriced, I suggest you take that up with your management.

>Can a good 2-meter radio (Kenwwod, Icom, etc.) be modified to transmit in
>the 150 to 154mhz range? Do I need a permit (you dont even need a licence
>to use a race radio!)?

You *do* need a license for a "race" radio. What these radios actually
are doing is operating on the itenerant channels of the land mobile
service. They are required to be licensed. Anyone who tells you different
is either ignorant of the regulations or lying. Amateur radios are not
Type Accepted for land mobile operations. Modifying them to operate on
these frequencies, while technically possible, would be a violation of
the regulations if you transmit with them.

>What is MARS/CAP use?

The Military Affiliate Radio System is a Department of Defense radio
service, operating on military frequencies. Amateurs may be accepted
to participate in this activity. The Civil Air Patrol service is also
operated on government frequencies to support the SAR functions of the
Civil Air Patrol. Amateurs may also be accepted to participate in this
activity. Type Accepted equipment is not required for either of these
services, so modified amateur radio equipment may be used.

>If I get a handheld, can I get an amp that operates on 12vdc to boost my
>signal? In a typical race, the car may be as far away as 50+ miles over
>rough terrain.
>
>Can a 2m base station antenna be easily tuned to 152mhz?

It's technically possible to do either of these things. However, operation
on land mobile frequencies with amateur equipment is illegal.

>Thank you in advance for any advice in this area. I have contemplated
>getting into amateur radio for a long time, and this may just push me in!

Amateur radio can be used for ocasional personal business under a recent
FCC regulation. So it may be legal to conduct your race support activities

via amateur radio, but you can't use amateur equipment on land mobile channels, and you have to follow the other amateur service rules while operating.

Gary

1470. Balloon Flights in Colorado (February)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-03 07:45:49 UTC
From: rickvg@usa.net
Message-ID: <5vTCISEHGYq1075yn@usa.net>
Source record: 252721

Edge of Space Sciences now has a home page available to WWW folks.

http://usa.net/~rickvg/eoss.htm

There's lots of interesting info there regarding our group.

FLIGHT PROFILE FOR EOSS 21

LAUNCH DATE: Feb 4, 1994
LAUNCH SITE: Jim White's Place
LAUNCH SITE COORDINATES: 39.5166 deg North
104.5920 deg West
LAUNCH TIME : 15:30 UTC
FLIGHT EXPERIMENT: Flight Qualification of Shuttle II
PROJECT INTEGRATOR: Jack Crabtree AA0P, Mike Manes W5VSI

Shuttle II FREQUENCIES:
Telemetry 144.340 MHz
Beacon 147.555
ATV 426.250
10 Meter beacon 28.322 (still in development but expected)

Foxhunters:
CRA Repeaters 447.150 MHz

PURPOSE OF THE FLIGHT:

Jim White, WD0E, has graciously offered the use of his home as a launch site. We are expecting a launch time of 15:30 to 16:00 UTC.

Our last flight revealed some bugs and destroyed some equipment. This flight will requalify the "Shuttle II" for its upcoming experimental payload.

APRS will be active on this flight

From the APRS documentation:
THE LATEST APRS is posted on 410-280-2503 BBS. After version 3.11 I will also always post a file similar to: 400to401.zip which will contain only the files that changed in the latest release.

The Automatic Packet Reporting System "APRS" is also available by FTP and is located at ftp://oak.oakland.edu/pub3/hamradio/pc/digital/utils/. Look for APRSxxxx.ZIP where xxxx will represent the current version number.

LAUNCH TIME : 15:30 UTC (tentative)
FLIGHT EXPERIMENT: Atmospheric Sampling of Inversion Layer
PROJECT INTEGRATOR: University of Colorado at Colorado Springs
Jack Crabtree AA0P

Shuttle II FREQUENCIES:
Telemetry 144.340 MHz
Beacon 147.555
ATV 426.250

Foxhunters:
Pikes Peak FM Association Repeaters 449.450 MHz (tentative)

PURPOSE OF THE FLIGHT:
------------------------------
Launch is scheduled for 15:00 UTC at the United States Air Force
Academy's Glider Port.

Two experiments will be flown.

1.) A gas capture experiment to sample air below and above the thermal
inversion that regularly resides above Colorado Springs. These samples
will be obtained by using computer controlled, evacuated canisters.
These canisters will be recovered and the gasses they capture will be
analyzed for their constituents.

2.) Ozone will constantly be monitored throughout the flight. This
information will be transmitted to the ground via telemetry channels in
the EOSS "Shuttle II" where they will be captured on computer for later
analysis.

>however a chance that one of the cells is dead).

Make sure the resistor is across INDIVIDUAL CELLS, not the battery! If you run the battery way down, some cells will go to zero before others, and the reverse charging of those cells by the discharge of others if very harmful to them.

Also, keep in mind that the so-called memory effect is very rare (according to the Gates Battery Engineering Manual, which has an extensive section on this). In order to create the memory effect one needs to repeatedly partially discharge the battery to the SAME level.

With memory effect, the battery will not deliver less energy than without it, itsimply delivers that energy at 90% of the design voltage (in the memory region) rather than at 100%. For a radio transmitter this can be a problem, since output power may go down significantly. For most receivers it won't make any difference at all.

Again, all this information is from Gates. Many manufacturers of equipment (but not of batteries) will disagree.

I won one at our club Xmas party, and have used it continuously since. I find it to have good range ... much of my 2M operating is simplex. I can hit a 440 repeated from within my auto about 12-15 miles out. No outside antenna, just r/duck.

Have really learned little about the MANY features, although those I learned and use seem to work well. No complaints.

It is a little hard to operate with gloves on ... but, I don't do a whole lot of that anyway.

No complaints. Nothing that REALLY stands out, other than the nice reports I get.

1478. 1995 Special Olympics World Games

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-03 13:20:19 UTC
From: battles@ibm.net
Message-ID: <3gtaij$11l8@news-s01.ca.us.ibm.net>
Source record: 252579

FACT SHEET: 1995 Special Olympics World Games
June 28-July 9, 1995
New Haven, Connecticut

Greetings to all radio amateurs!

The US Congress authorized a large appropriation to help fund the 1995 Special Olympics World Games, the biggest sporting event in the world in 1995, and the biggest event ever held in southern New England! More than 7000 Special Athletes from 140 countries will participate in 25 events at the Yale Bowl and elsewhere, and organizers expect more than 2000 coaches, 15,000 family and friends, 1500 media representatives, 700,000 spectators, and many celebrities, honored guests, heads of state and other VIPs to be on hand (such as Gov Rowland and probably President Clinton and Vice President Gore). There will also be many hours of national network TV coverage and enormous amounts of other media publicity.

All Amateur Radio operators are invited to volunteer their time and effort to take part in communication support for this enormous public service activity.

I have agreed to serve as volunteer Amateur Radio Liaison to the 1995 Special Olympics World Games and we are planning several Amateur Radio activities. Clubs and individual amateurs are asked to assist by getting involved NOW, as the Games are drawing near and coordination is well underway.

All ARRL Connecticut Section cabinet members have been briefed on the event plans and are graciously helping me with coordination.

Hams will operate a special-event station, W1SO (call sign courtesy of Bill Carpenter, W1SO, of Bristol), which is being managed by Neil Salowitz, WA1CBW, of Amston. Kenwood, AEA and other major ham radio manufacturers are acting as corporate sponsors and donating the use of a large amount of equipment. If you or your club would like to participate, please call Neil right away at 203-228-4922.

We have been asked to participate with each of the Host Communities throughout the state that are each hosting Special Athletes' delegations from a particular country. Amateurs are needed to set up HF stations for a demonstration/presentation at schools in most Connecticut towns to explore the educational aspects of meeting people from other countries and looking at their cultures, geography, etc. We need a Manager to coordinate this project and volunteers (clubs or individuals) to set up stations at local schools for a day. Please contact me if you can help.

We are also going to establish message centers in the Olympic Town Complex to let the Special Athletes and delegations originate NTS radiograms to send to their homes, in the US and overseas. The NTS Project Manager is Jim Ritterbusch, KD1YV, or his daughter Michelle, N1PNT, at 203-790-7041. All hams interested in traffic handling should contact Jim or Michelle immediately.

Connecticut ARES members will be requested to stand by for general communication support, and the CT ARES Search-and-Report Team will be activated on standby for the Cessna Fly-In at Bradley Airport in Windsor Locks on June 30, where several hundred private aircraft will sortie to bring in Special Athletes and VIPs. Contact ARRL CT Section Emergency Coordinator Clark Magness, NI1U, at 203-457-1892, to assist in ARES operations.

Hams will also support the bicycle races and foot races; to assist, please contact Dick Phelps, K1SW, at 203-875-0151, or Don Izzo, N1HAX, at 203-466-0435.

The Special Olympics Committee has also requested hams to provide ATV coverage for live video of certain outdoor events, such as the road races and sailing events. Some of this will be done by stationing hams on boats and military helicopters. ATVers who want to help should call me.

All hams who assist must be officially registered in advance so that they may be placed on the volunteer rosters and issued the proper clearance, access credentials, passes, etc. Don't wait until June--that will be TOO LATE. McDonald's, as a corporate sponsor, will provide food for all 45,000 volunteers, although out-of-state volunteers must arrange their own lodging.

All clubs are asked to distribute this information immediately to their members, in meetings, on the air and via newsletters. If you have questions, contact me.

This will be the largest public service event most of us will ever see in southern New England and it's an opportunity to exemplify the powerful capabilities that make the Amateur Radio service a vital national and international resource. Thank you for your assistance!

Actually the same. Electrons still flow for a point of greater concentration
(i.e. negative) to a point of lesser concentration (labeled "positive").

The callbook server shows no Steven Savoie with any amateur radio license. It also shows no Savoie living in Glocester or Gloucester or anything close to that.

I suspect this is yet another example of the media calling any nut with a radio a HAM radio operator. You may recall a few years ago, when somebody was interfering with air traffic control in New York City, ABC aired a report saying that an unknown ham radio operator was deliberately interfering with air traffic control. If they didn't know who it was, how did they know he was a ham?

By the way, what does any of this have to do with the no-code Tech license?

>Lawrenceville, GA 30244 | |

I work for a major radio manufacturer and the reason for the negative fuse is to protect the radio in the event some other device tries to obtain a ground path to it. I never heard of 3 phase alternator noises reasons. As for fire, the fuse does not do much good at the radio end. A good installiation will have a big fuse right at the battery in the event the positive radio lead gets groinded. Remember most automotive batteries can supply 400 + amps for a short period, but long enough to start fires and such. My mobile has a 60 amp fuse right at the attachment to the positive battery post for the radio connection. Also i maintained the regular radio power lead fuses too. I feed my mobiles with # 10 gauge multi strand wire, so even HF works great..

1482. UK information

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-03 13:37:17 UTC
From: vinod@kariat.watson.ibm.com
Message-ID: <VINOD.95Feb3083717@kariat.watson.ibm.com>
Source record: 252584

A fellow ham is visiting the UK in March, and is looking for some information. Any help is much appreciated. He would like to receive information on the following:
1. Do repeaters usually use a tone burst system? (If so, anybody know if add-on units are available?)
2. Repeater frequencies (2m or 440) in the Machester area and London area (He is also visiting a town about 90 miles due north of Heathrow, I don't remember the name and I am a little shaky on the geography, that may fall in the Manchester area..apparently, it is the town where the Bronte sisters used to live, if that helps ..)
3. Reciprocal licence info (I believe he is already looking into this).
4. Any special restrictions on bringing equipment in. (He is just looking at bringing in a dual-band HT, I think it is an FT 530).

Please reply directly by email, as this is probably not of much interest to the general readership here. Many thanks in advance!

Brian,

In recent years Icom has started using different CPU's for different
parts of the world, so no longer will just moving or intsalling a diode
change the frequency coverage of the radio. This is really much more
the case with versions other then U.S.A. versions. The W@E needed both
CPU's replaced to make it an American U.S.A. version.

Right the first time. Big time mistake. Criminal mistake.

: Steven P. Savoie, 26, of Snake Hill Road was charged with making threats
: or false reports of bombs being placed, and was released pending District
: Court hearing, state police said.

: "I believe he thought it was a joke", [Mayor] Cianci said.

The troopers must have thought it was hilarious. I'm sure they think
the Amateur Service is a joke.

[snip]
: ---

: You have to wonder: This guy was stupid enough to open his mouth. Had he
: not, would they have every found him? Probably not.

I don't know, but I do know this: you can't blame "lower standards"
for this one. Consider question N1J02:

"Why is transmitting on a police frequency as a `joke' called harmful
interference that deserves a large penalty?

A. It annoys everyone who listens
B. It blocks police calls which might be an emergency and interrupts
police communications
C. It is in bad taste to communicate with non-amateurs, even as a
joke
D. It is poor amateur practice to transmit outside the amateur bands"

Sheesh! This is known in the trade as a "gimme". It's just not
possible that this fellow's problem was that he merely memorized all
the questions. Unless his license was fraudulently issued, this
fellow *must have read that question* sometime or other and then
ignored a warning which ordinary reasonable people don't need in the
first place. (How many people right off the street do you suppose

would get this one wrong?)

Sympathy is hard to muster.

And now some news: My wife, Angela, a quite intelligent woman, gave up her entire weekend to study for the exam, and is now officially N1UEZ. She won't be using the radio much, but she'll be legal when she does. Therefore, in her honor, I hereby ban, enjoin, and entirely forbid all derogatory comments about "clueless" Techinician licensees throughout USENET! :-)

Well, if its like any of the no-clues I've heard on the radio, they
seem to forget what they've memorized once the license arrives.

Notwithstanding the advice above, you may find frequency plans in Ham
Radio Today magazine (Scanner section) from time to time. There are also
LOTS of scanner books which give out detailed listings.

> Robert WD5AAT

I seem to recall that the Accu-keyer was generally used with grid-block- keyed transmitters, and was designed to switch a negative voltage to ground. Most (all?) if the IC-700-series need to have a positive voltage pulled to ground. This is usually done by connecting it to the collector of a grounded-emitter NPN transistor and then saturating the transistor.

Didn't the Accu-keyer have an alternate connection for "positive keying"? If so, use it. It's probably a jumper or two inside the keyer, near where the "keyed" output connects to the circuit board.

Hope this helps, 73,
Dave, KZ1O

Tim,

What barcode format will you be printing? There is another post here from Scott Darragh that suggests having the QSL printshop put the callsign, and more, on the card. I prototyped that, and can get everything he suggested (Call, Country, City, State, Zone) and more (Grid square, first name) in one easy stripe in 3 of 9 code along the front of the card, underneath the handwritten info blocks.

Not everyone would have the capability to print barcodes for each QSO; however, it would be quite simple to ask the QSL printer to pre-print info that never changes from one QSO to the next. Maybe a variable length barcode would work - a short (pre-printed) one for static information, and a longer (customized) one that contains the static info, plus QSO information.

The US post office uses a similar scheme, depending on whether the barcode is for the zip, zip+4, or the zip+4+residence number info.

> suggested.

Apparently all sorts of things change when one crosses the ocean.
"Zapping" becomes "belting", "color" becomes "colour", etc. :-). Also
the polarity of the zap apparently also changes. I've always done it
using normal charging polarity (+ to +), although for the fraction of
a second recommended here it probably doesn't make much difference.

The current level required does vary a bunch depending on the size of
the cell and the severity of the short. I've had D-cells that would
soak up 10 amps seemingly indefinitely without burning out the short.
AA's may need only a few hundred milliamps. Using a variable current
source lets you bring the current up slowly to just the level needed
to burn out the short, and if you're using normal charging polarity,
you don't have to worry about turning off the current so fast.

> Do this with each of your "weak" cells .... just once .... then recharge
> them on a standard 5-hour Ni-Cd charger. With any luck, you should find
> them as good as new! I have rejuvenated MANY, MANY NiCd cells in this
> way over the years.

I have found that each time you zap a cell, it degrades slightly and
will short a little quicker the next time, so this works best with
cells that get used a lot and don't sit around for weeks after
charging.

> I have become convinced that the use of so-called "Fast Chargers" (i.e
> 2 hour Ni-Cd charging units) seriously shortens the life of Ni-Cd cells.

> at least give the cells some chance of recovering from the far-too-rapid
> charging cycle of the "Fast Charger".

I definitely agree here. I suspect that fast charging is not that
hard on cells if the charger is smart enough to not overcharge the
cell, but that most chargers aren't that smart. Even with smart
chargers, I believe nicads are happier and will live longer with
slower charge rates. The standard "overnight" (14-16 hr) rate will
almost certainly prolong cell life compared to faster rates.

Can anyone recommend any good books on modulation/demodulation of digital modes (ie. packet, rtty, amtor, wefax, sstv) ? With a slant on computer interfacing or interpreting (software) would be ideal, but (I expect) too much to ask for. Other radio signal/software interpretation is also interesting to me. Such as the tuning algorithms/indicators on TNC's like the MFJ or in various ham software I've looked at. What's up with that??? Any guidance appreciated. THX for anything. 88

I think it's just a case of someone mistakenly thinking that only
(no-code) Technician class licensees are capable of this type of thing,
or at least are doing it much more often than others. Of course, this
is wrong. Unfortunately, it seems to me at least that Amateur Extra
class licensees are the largest group. (Sort of gives the rest of us a
bad name...)

Robert,
I use the Accu-keyer and you must make sure that the keying is proper. There is a a way to switch between positive and negative keying, but I use a better way. Among the many mods for that keyer was one that made a universal keyer output. It doesn't matter which way the rig wants to work, all electronic. If you want a copy of the mod or of the entire keyer, let me know, I have a complete file.

------------ Comments ---------
I disagree with Walt. I believe that QSL cards or some other type
of manual confirmation will be with us for a long time, possibly
forever. Computerized QSO checking will not work 100% of the time.

No matter how careful an operator is, there is always the
possibiltiy of error in logging or understanding a call sign, hence
a computerized system won't work for all cases. There is always
some percentage of QSOs in expedition and contest logs that are
logged or heard incorrectly.

It is a goal to consider, but quite frankly I'd rather collect
QSL cards over computer printouts or diskettes anyday....

Do you have evidence to back up this assertion?

It is *illegal* to park in handicapped parking spaces, at least
in most jurisdictions. It is not *illegal* to post commercial
messages to usenet. You have here compared an *illegal* act to
an act *which you personally consider objectionable*.

If you wish a newsgroup without advertising, then you should take
those actions which will lead to such a newsgroup: a call for
moderation of the group, or a call for a new (moderated) group.
Within usenet, this is the only mechanism available to control
content - other than peer pressure ... and you will lose this one.

>Welp, here's another fine example of what lowering standards in the
>hobby has given us. This guy deserves to go to jail.

I have held a Technician class license for a little over a year now and I
just want to throw in my $.02.

Not all Technicians are bums, but it should also be said that not everyone
who passes 13 or 20 wpm on CW is the most gifted, best operator on
the air. I've heard lids with tech calls as well as 2x2 calls.

It seems like there will always be, much to my dismay, a certain amount
of discrimination against those who are Technicians, but I just let that roll
off my back. I have plenty of QSOs on 2 meters as well as 70
centimeters. In the future I plan on buying a TNC for packet and then
buying or building a good 6 meter radio. If you want to descriminate
against me because I don't know CW then that is fine; I am thoroughly
enjoying the VHF/UHF spectrum of the hobby.

Why can't the energy that is spent bashing Technicians be used to
encourage them to learn the code. Even if they don't want to learn CW,
encourage them to become involved in someother part of amateur radio
(.i.e, packet, ATV, 2m SSB, etc). The greatest thing about amateur radio
is that it offers something for everyone.

Just my $.02.

Putting tape on keyboards? Whatever for? Looks like the keyboarder
has to learn to hit a lot of different keys while the Morse operator
only has to hit one. Seems the higher skill level goes to the typist.

Guess there's not much demand for Morse only gear these days. Bet Ramsey
and Hamtronics are selling lots of FM kits, we know Baycom is moving lots
of modems, and even GRAPES is doing a brisk business in 56 kb RF modems.
The market is leading, the regulations are lagging.

1508. TVI from 2m!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-03 21:51:25 UTC
From: Paul_M._Butterfield.wbst129@xerox.COM
Message-ID: <"3-Feb-95.16:48:43".*.Paul_M._Butterfield.WBST129@Xerox.com>
Source record: 252611

Hi gang,
I am a new ham with a small HT as my first radio. In order to get the most out of my 5W, I have mounted a Diamond X200A dual-band antenna on my roof, necessarily near the TV antenna. Unfortunately whenever I xmit with this setup, I make snow out of the TV picture. Makes the XYL unhappy. At some point, I'm going to a higher power xmitter, which will make the really bad snow even worse!
The only TV channels we care about are 8, 10, 13 (180, 192, and 210 MHz) and UHF. My radio at present is only 2m (140-150 MHz), so I'm wondering is there something I can do about the problem?
Please don't suggest cable TV. I know that will fix it, but I'd like to postpone that expense for a few more years. If there were a cheaper solution I would welcome it.
Please copy me in on your responses as I receive list output via a retransmission.

From: brian.carling@acenet.com
Message-ID: <2a6.5514.545@acenet.com>
Source record: 252612

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com

SD>> PROPOSAL:
SD>> We would like to propose that other groups and individuals seriously
SD>> think about placing a BAR-CODE on their QSL cards. This would enable
SD>> us to more automate the QSL process. At a minimum the BAR-CODE should
SD>> contain the callsign, however, more thought could be given to the
SD>> format. For example it could also contain, as an option, the band,
SD>> mode, QSO date etc.

SD>Just as a thought in place of the barcode stating your made, mode, signal
SD>report
SD>Why not have it include the following:

SD>Thid would allow a ham to have a single barcode placed on every one of his
SD>QSL cards at time of printing. Secondly, all that would need to be added
SD>would be the freq, mode, rst and time. Just my thoughts and opinions.

Scott: this seems antiquated. Why do we even need QSl cards at all?
Why not just send the bar code?
In fact, why not automate that too?
You could have a bar code reader that reads a magnetically encoded bar
code on the back of the op's hand or forehead, and includes ALL of his
license info, callsign, station location, Social Seciurity number, date
of birth, county, grid square etc., and then integrate all THIS with the
RS-232 port from the rig that could output the mode, band, time,
callsign of the station worked & their report. Then the whole thing
could be E-mailed to the other station, and print out a full color
glossy QSL card on thick card stock...

Heck with this old fashioned methods!

From: kla@helios.augustana.edu
Message-ID: <kla.791848711@news.bradley.edu>
Source record: 252613

Excuse me for asking, but is there an easy way to
find out who your local NTS person(s) may be?
Any kind of "directory" maintained, say with the
Traffic Manager for a section, to find out?

Do NTS people get bothered by any type of traffic,
say something they might deem to be "trivia" and
therefore a waste of their time?

Thanks. I'm trying to understand "todays" NTS.

Hi Bill:

They made it real cryptic. To the best of my records, you hold the 'f' button on the side, the '3',
the 'B', the '#' and turn on the power, then you turn it off. Think you may need another set of
hands to make it happen.

Good Luck,

1516. Two-Line Orbital Element Set: Space Shuttle

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 00:36:20 UTC
From: tkelso@afit.af.mil
Message-ID: <tkelso.791858180@tiger>
Source record: 252619
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.info

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, (334) 409-9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

1517. 2M HT in France

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 00:50:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A2D46A.00CB0023C3.uuout@camel.com>
Source record: 252620

I'll be travelling in France in September and would like to take my HT.
Two questions: Has anyone gone through French permit process lately?
Is it a hassle, expensive, etc.? Also, I've read somewhere that
European repeaters use a 1750 Hz tone burst. Is this common in France?
If so, it would probably be a hassle to use my Kenwood TH-22AT. Thanks,
Robert WD5AAT

1521. Transistors in HF Amps

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 02:01:58 UTC
From: feliccia@unix3.netaxs.com
Message-ID: <3gun6m$9mt@netaxs.com>
Source record: 252624

Here is a Query:

What transistors/amplification schemes are used in the Ameritron and Yaesu, and Icom HF amplifiers. Has anyone actually opened these up and seen?

I think the Ameritron uses a FET scheme. Are the others Bipolars? if so, what do they use? NEC, Motorola, Phillips? Do they use a straight push pull or one transistor configuration, or do they split through 2 or more RF paths as many VHF amplifiers do.

Please reply to email.

Thanks,
Nick.

Maybe (as usual) the news media confused a CB'er with a HAM??

In any event -- I'd like to point out that after a 20-year lapse in my license,
I am again, this Tuesday, taking the test. Last time I had a General,
this time, just to get started (with my 14 year old son), I'm going for
Tech. We both will take the test for Advanced on April 4th, but for now
Tech gets us talking and enjoying radio together.
I don't think anyone should blame a class for the actions of an individual
or small group. The Tech license definately has its place. It WILL bring
more people into radio. I believe many WILL study code to be able to DX HF
and eventually upgrade.

SB PROP @ ARL $ARLP006
ARLP006 Propagation de KT7H

ZCZC AP74
QST de W1AW
Propagation Forecast Bulletin 6 ARLP006
From Tad Cook, KT7H
Seattle, WA February 3, 1995
To all radio amateurs

SB PROP ARL ARLP006
ARLP006 Propagation de KT7H

Average solar flux was down a bit last week. The quiet geomagnetic conditions ended after January 28 when the A index rose above 20 for several days. The K index was up to five over several periods on January 30 and 31.

Solar flux should drop to the mid 70s around February 12, and then peak again around 92 from February 18 through 21. Recurring coronal holes should cause disturbances around February 13 and 14 and again around February 26 and 27. Look for really good stable conditions with low A and K indices around February 8 through 11.

Sunspot Numbers for January 26 through February 1 were 54, 36, 51, 25, 43, 55 and 66, with a mean of 47.1. 10.7 cm flux was 85.7, 88.5, 82.7, 84.6, 86.5, 86.7 and 87.1, with a mean of 86.

The path projection for this week is from Dallas, Texas to Christmas Island, VK9X.

80 meters should be open from 1130 to 1330z, and 40 meters from 1100 to 1430. Check 30 meters around 1000 to 1100 and again from 1400 to 1530. Check 20 meters from 1530 to 1800, and 17 meters around 1630 and again around 2300 to 2330.

I'm fairly new here, but was wondering what impact use of these communication systems for data transmission would have on the desiarability of a particular technology.

I figure prepared people like us would want to use computers for a number of purposes and which data technologies would be most useful for the "Survivor-Net".

From: kbarton@cwis.unomaha.edu
Message-ID: <3gut5l$jqp@s-cwis.unomaha.edu>
Source record: 252627

This may not be the most appropriate group, but I believe it is
the best informed group for this request. I need technical info on succes-
sful designs. Specific designs for largish TC's (> than 200kV) would
be best, but good complete theoretical treatment would be helpful as well.
I have worked as a technician and research assistant for 14 years
so you don't need to be gentle. I've built hundreds of circuits, but a
Tesla coil ain't one of them.
I find nothing thru our Archie, but previously saw some ftp list
with Tesla info, though I don't have it.

>Within usenet, this is the only mechanism available to control
>content - other than peer pressure ... and you will lose this one.

No, there's also Cancelmoose[tm] and the advent of other cancelbot style-solutions to the spammers on the net. I agree that peer pressure is not likely to work--as long as a company has the potential to make so much as one sale, he's going to post ads to the net if he has no respect for the desires of the group's readers. I saw a post that suggested creating a group like rec.radio.amateur.ads to have a place where those who desire to read ads can go. But the advertisers wish to invite themselves into our living rooms and shacks, rather than place their ads on our doorstep.

Again, I refer those who feel imposed upon by spam ads to check out alt.current-events.net-abuse for some very enlightening reading, starting with the FAQs there.

1527. Question about Radio Shack HT battery packs

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 05:53:13 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1995Feb4.055313.16502@VFL.Paramax.COM>
Source record: 252529
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

A couple questions about Radio Shack HT battery packs...

1. Are replacement ni-cad battery packs available for the RS HTs ? Cost?

2. Is a replacement alkaline battery pack available? Cost?

3. Will battery packs from other HT's fit it? I heard rumors that
some ICOM pack fit. Is this true?

4. Do both HTs (2 meter and 440) use the same battery pack?

1528. AMSOFT, etc ad nauseum

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 06:25:11 UTC
From: Jrouse@ix.netcom.com
Message-ID: <3gv6k7$nt7@ixnews3.ix.netcom.com>
Source record: 252530

OK, there is emphaticaaly a diversity of opinion here on the rights and wrongs of AMSOFT and others using this news group to hawk their wares. True, the old entreprenurial spirit would seem to advocate AMSOFT doing its thing to convince us all to buy the CD-ROM it heralds as the best thing since 572Bs, BUT they do so with a heavy hand. For instance, the rather disingenuous heralding of a "newsletter" which turns out to be little more than a full-page ad for the disk is, to put it mildly, less than candid. I, for one, don't like that. But, then again, I make my living through advertising. However, there are standards, and AMSOFT's heavy-handedness is less than one would desire, or at least less than I would desire. In a word, it's sneaky. Just as are those weekly postings of a "free newsletter."
But, as many have said, it's related to ham radio and thus is within the realm of fair play. Yes, the blurbs would make it to DX clusters and no doubt would receive the benediction of the usually pompous node gurus. BUT, many here still find the frenzied ad campaign (and that's what it is) offensive....So, take it elsewhere.
rec.radio.amateur.commercial seems about right. Why annoy anyone on the group? AND,the responses (like mine) become tedious after a (short) while.....A truism: a potential customer irked is a customer lost...
Why do that? Buckmaster doesn't.....

So? I thought an exchange wasn't valid unless it was received and
logged correctly. Computerization would ensure that errors are not
made in confirming entries in the log. Computerized entries would
also eliminate lost cards and cards misrouted via postal authorities
or bureau workers. Computerization should lead to fewer errors,
and fewer "doubtful" QSLs.

>It is a goal to consider, but quite frankly I'd rather collect
>QSL cards over computer printouts or diskettes anyday....

Well, that's the real reason isn't it. The game is about collecting
postal cards. Get rid of the cards and there's no point to the
game. (Note, this isn't a condemnation. Some people collect coins,
others collect stamps, Dxers collect colorful postal cards.)

1531. GB2RS News 5th February 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 11:33:45 UTC
From: dave@llondel.demon.co.uk
Message-ID: <791922825snx@llondel.demon.co.uk>
Source record: 252533
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 5th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with a report from the RSGB DX News Sheet. In last weekend's CW Worldwide 160m CW Contest no less than 83 countries were worked from the UK, including Alaska and West Malaysia. In addition, UK stations had contacts with 43 US states and Canadian provinces.

The 1988 RSGB President, Sir Richard Davies, G2XM, died last weekend. He was President during the Society's 75th Anniversary year and was active on the air until recently. A full obituary will be published in the March edition of Radio Communication.

The RSGB, which carries out Morse testing on behalf of the Radiocommunications Agency, has vacancies for Morse Examiners in the following counties: Bedfordshire, Cumbria, Greater London (South), Greater Manchester, Gwynedd, Lincolnshire and Surrey. RA requirements are that prospective examiners demonstrate their ability to receive at 20 WPM and send a typical test passage on a manual key. In addition, the Society is looking for people with the personality to deal with candidates in a professional manner, and the ability to work as part of a county team. Applicants should contact the Chief Morse Examiner, Roy Clayton, G4SSH, at 9 Green Island, Irton, Scarborough, North Yorkshire YO12 4RN, telephone number 01723 862924. Interviews will be arranged at radio rallies throughout the UK, starting with the RSGB London Amateur Radio and Computer Show.

A new GB2CW RSGB Morse Practice transmission is available each week in the Huntingdon area from next Tuesday, the 7th, at 7pm on 145.225MHz FM. The operator will be G4LHI of Huntingdon. A full list of the GB2CW Transmissions is published in the 1995 edition of the RSGB Call Book.

Latvia has signed the CEPT T/R 61-01 agreement which means that UK amateurs may operate temporarily in Latvia simply by using the prefix 'LY stroke' before their own callsign. This removes the need for formal reciprocal licensing, except for long term operation. Suitably qualified Latvian amateurs may operate in the UK on a similar basis.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Nauru (C2), W9GW will be active until the 12th of February, mainly on CW on 80 to 10 metres.

From Comoros (D6) DK7UY was due to be active from now until the 24th of February, on 80 to 10 metres using CW, RTTY and SSB, but mainly CW. He will not QSL direct, only via the Bureau. The callsign is not known.

Next the Rally News:

Today, Sunday the 5th of February, the South Essex Amateur Radio Society Radio Rally, is at The Paddocks, Long Road, Canvey Island, Essex, at the end of the A130. The rally features trade stands, a bring and buy stall, and refreshments. Disabled car parking is located near the main doors. Doors open at 10.30am and talk-in is available on 2 metres, channel S22.

We know of two rallies for next Sunday, the 12th:

The Cambridge and District Amateur Radio Club Rally takes place at the Addenbrookes Ambulance Station, Cambridge. Doors open at 10 am. The event features trade stands, a car boot sale and a bring and buy stall. Refreshments will be available. Further details can be obtained from John, G0GKP, on 01954 200072.

And the Northern Cross Rally will be at Rodillian School on the A61 between Leeds and Wakefield, near the junction of the M1 and the M62. The event includes dealers, a bring and buy stall and refreshments. Doors open at 11 am, or 10.30 for disabled visitors and for the bring and buy. RSGB Morse Tests will be available on demand. Talk-in will be on 2m and 70cm. Details can be obtained by calling Dave Gray, on 0113 282 7883.

Three dates to note for later this month are:

Saturday, the 18th, when RSGB Headquarters at Potters Bar will be open to visitors. This is not a formal open day so there will be no guided tours, but the shack, museum, library and bookshop will be available between 10 am and 4 pm.

On Sunday, the 19th, the 1994 RSGB VHF Convention will be held at Sandown Race Course, Esher, Surrey. Full details of the event, including the lecture programme, are published on page 24 of the February edition of RadCom, or can be obtained by calling RSGB HQ on 01707 659015.

And on Sunday, the 25th, the Tyneside Amateur Radio Society Rally takes place in South Shields. In addition to the usual traders and a bring a buy stall, there will be an RSGB stand. GB2RS will be bringing you more about this event, or you can call Jack, G0DZG, on 0191 265 1718 for details.

And a date for your diary:

The RSGB National Mobile Rally is being held as usual at Woburn Abbey in Bedfordshire. The date is Sunday the 6th of August and details can be obtained from Norman Miller, G3MVV, on 01277 225563.

Now for the HF contest news:

The last event in the RSGB LF CW Cumulative Contest takes place today, Sunday the 5th, on the 3,5MHz band from 1600 to 1800 UTC. December's RadCom, page 78, gives detailed information.

Next weekend, there is the 1st RSGB 1.8MHz Contest which runs from 2100 UTC on the 11th to 0100 UTC on the 12th. The full rules are in the October 1994 RadCom.

Next some VHF contest news:

Today, Sunday the 5th, there is the RSGB 432MHz Fixed, Affiliated Societies and SWL Contest which takes place between 0900 and 1500 UTC.

Next Sunday, the 12th, sees another event in the 70MHz Cumulative Contest which takes place between 1000 and 1200 UTC. The rules for both of these events can be found in the January RadCom.

The RSGB VHF Contests Committee has received several requests for the inclusion of a 6 metre section in VHF National field Day. The committee is willing to consider this if there is sufficient support from the membership, but only as an alternative to 4 metres, not as an addition. Changes could be made in time for the 1995 event if RSGB members express their views in writing before the end of February. Write to the Chairman, David Johnson, G4DHF, whose address is correct in the RSGB Call Book. Members opinions will also be sought at the RSGB VHF Convention.

GB500AU, celebrates the 500th anniversary of the founding of Aberdeen University in 1495. It will be operational from next Friday, the 10th, to Thursday, the 16th on 80, 40, 20 and 15 metres SSB, SSTV and CW, and on two metres FM and SSB. Further details can be obtained before the event from GM4CAU on 01224 272538 between 9 and 10 am.

And now the solar factual data:

The period from the 23rd to the 29th of January saw solar activity at low levels with flares taking place on most days. Geomagnetic activity was very quiet but increased to active levels on the 29th. The sunspot indices declined throughout the period from 87 on the 24th to 25 on the 29th. The sunspot mean for the period was 56. Solar flux levels also declined from 97 units on the 24th to 83 units by the 28th with the average at 89 units. C class flares occurred from the 23rd to the 27th with the largest being a C7/1N on the 24th. The electron fluence varied little day to day and was at a moderate level throughout. The x-ray flux level remained at a reasonable level due to all the small flare activity and averaged B1.1 units. The 90 day solar flux average on the 29th was 82 units.

Geomagnetic activity was very quiet from the 23rd to the 28th with an Ap index of only 3 units on the 26th and the 27th. On the 29th, activity increased to active levels with an Ap index of 19 units. The average for the period was Ap 6 units. The state had been 'nil, nothing to report' until the 28th, then 'magalert' from the 29th due to a recurring coronal hole. The aa indices, as reported by the British Geological Survey for

the period from the 17th to the 23rd of January, averaged 38.1 nanoTeslas, about K3. Conditions started the period at 'sub storm' levels with the late evening period on the 17th up to 115 nanoTeslas, which is K5; the daily figure for the 17th was 55.9 nanoTeslas. Conditions declined from the 18th and were back to quiet levels for the rest of the period. The quietest day was the 19th at 8.9 nanoTeslas. Bartells rotation number 2206 starts on the 8th of February.

I'll repeat the figures: Spots - 56; Flux - 89; Ap index - 6; x-ray flux - B1.1.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 20th to the 26th of January, averaged 6.7MHz. The best day was the 20th when the figure reached 7.4MHz. The darkness hour lows averaged 2.1MHz. The daytime highs are taking place between 12.00 and 14.00 hours with the darkness hour lows between 5.00 and 06.00 hours. Stratwarm alerts have been in existence for most of the period. On the 22nd the whole stratosphere temperature gradient was reversed between 60 degrees north and the pole.

I'll repeat the figures: Highs - 6.7MHz; Lows - 2.1MHz.

And lastly the solar forecast.

This week the quiet side of the sun is expected to be looking our way. Solar activity should be very low with solar flux levels expected to be in the mid 70s. Geomagnetic activity should be mostly quiet to unsettled levels. Ionospheric MUFs for the south are expected to be at about 21MHz, and for the north 18MHz. Darkness hour lows are expected to be at about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Romeo and G7 Uniform Golf series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Romeo series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

: I am looking for 4mm metric studs for my Kenwood TS-50S and AT-50.
: I use these mobile, exclusively, and am slowly wearing out the
: ground-screw threads on the back of the chassis. I live in Glendora,
: CA and have searched Southern California hardware stores unsuccessfully.

: A stud is a double-ended bolt. It is not simply a length of threaded
: rod in that it has an unthreaded center portion of greater diameter.

: They look like this (roughly):

: ///////|||//////

: Hey, that doesn't look too bad...

: My plan is to thread them into the back of the rigs and leave them there.
: No more wear and tear on the female threads. Then, I can slip my ground
: straps

: Can someone supply the name and phone number of a hardware that carries
: these?

As a mechanic for a number of years I have often had to manufacture my
own parts from time to time. If you can't find the size that you need
by going to a parts store then I would suggest that you take the
"threaded rod" and install your own jacket around the middle as you have
indicated. It's better to simple take a smooth rod and use tap and dye
set to make your own threads. That way you can be sure that what you get
is what you want.

I hope that this helps! Good luck,

nstacey@crl.com

It's real. I attended a Field Day setup a few years ago, staged by the Westside Amateur Radio Club in Los Angeles. They had one of their stations inside a trailer, and the radio had an automatic antenna tuner. Well, SOMEBODY didn't ground the thing right. I was inside the shack about 5' from the radio when the op said, "Well, 15 meters is dead; let's tune it up on 20." He changed bands and hit the deadly little "Automatic Tune" button. The radio began buzzing as the tuner went to work. Also, I let out a scream as one of my teeth with a nice filling in it suddenly felt like a dentist was drilling in it with NO anesthetic! I RAN from that trailer uttering obscenities and the pain vanished as soon as I got clear of the thing. Needless to say I didn't hang around that particular shack much during the rest of the contest.

Yes, as long as you get everything you asked for when they first ship
your order.

I purchased a 4410R from TE systems 18 months ago. It was supposed to
come with a technical manual & schematic. 18 months, 6 phone calls, and
2 letters later, I still don't have either one. Everytime I call I
get the standard "we'll send it right out" and they never do.

Their product might be okay, but their service is shit.

AL> good hardware TNC.

In fact, TNC is more than just simple modem. It is far more complicated
than regular telephone line modem. This is complex AX.25 controler which
handles several levels of AX.25 protocol.

Those multi-modes are complex communication controlers. Some of them can
even handle WEAFAX images transmitted over METEOSAT, decode CW, even handle more
complex protocols than AX.25. Usually usevul and expensive devices.

Maestro.

>was the key.

The way this radio functions is that the rx local oscillator (f-11.7) is mixed
o produce the tx carrier freq. There were
several versions of this unit. According to the manual a "Standard" model had

an 11.7 offset for simplex operation. The "wide-spaced" model had dual offset
osc's at 11.7 & 16.7 for simplex or 5meg repeater split. I have also seen

several units which had only a 16.7 offset in a standard chassis. I suspect
that is what you have. In any case, all you need to do is to replace the 16.7
crystal with an 11.7 and change the corresponding warp coil. The bad news is

that the crystal needed is no longer available from motorola. I have sent a
sample one to sentry crystal and they are going to try to reproduce it for me.
The warp coil needed is still a cureFzvPnt item and costs under $2. Let me

know if you recieve this ok as I am having one heck of a time with line noise to
today.

1542. MONDAY: MIR AND SHUTTLE VIEWING WILL BE PERFECT IN SF!!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 18:43:48 UTC
From: manfred@sunspot.ssl.berkeley.edu
Message-ID: <3h0ht4$lle@agate.berkeley.edu>
Source record: 252546
Cross-posted to: sci.space.shuttle,rec.radio.amateur.space,rec.radio.amateur.misc

As you know, Discovery is on its way for the rendezvous with Mir. If the sky in the San Francisco Bay Area is clear on early Monday morning, we'll have the perfect viewing opportunity to watch Mir and Discovery fly in formation.

IT CANNOT POSSIBLY GET ANY BETTER THAT THIS!

One can expect to see both spacecraft as bright as Jupiter, if not Venus. The Sun will be right at the nautical twilight limit and will illuminate both spacecraft on the side that we'll be looking at. Mir and Discovery will appear in the north-west (309 degrees) and will be passing exactly overhead. Mir will be leading, and Discovery will follow shortly behind. Below are the circumstances for this pass. Let's hope there is no fog or clouds on Monday morning at 6:35 PST!

Enjoy,
Manfred

1543. Re: TS 940 serial number question

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 20:10:37 UTC
From: wcoyle@delphi.com
Message-ID: <xk06zWd.wcoyle@delphi.com>
Source record: 252547

My 940 is a 9 mil series and I've had ver few problems with it. One of the biggest was with the internal antenna transmatch. It only took a little TV tuner cleaner to straighten out the realys and I was back in business (but boy, was I scratchin'my head for a week). If the price is right, I would say go for it, but it won't command as high a price as a 7 mil or higher series unit.

1544. new ticket...want dual band

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-04 20:55:59 UTC
From: RedFive@ix.netcom.com
Message-ID: <3h0pkv$4f3@ixnews2.ix.netcom.com>
Source record: 252548

Hey,
I got my ticket in the mail about a month ago, but haven't been on the air yet...I've been looking for a nice dual band mobile to get me started out in this great hobby. I'm on a very limited budget, since I'm a student, but want something newer and easy to use...I guess like a plug and play deal. I just don't really know what I should be looking for...BTW, I'm a tech. If anyone has any suggestions for anything under $300 (yah, I know, dream on :P) I would be more than interested in hearing what you have to say about it.

Thanks in advance,
Eric

I had heard that the ARRL VEC was about to give software to all it's VE
teams with laptops/portable machines so they could just transmit the info
to ARRL HQ, then it would be transmitted from there to the FCC. Total time
would be one week before a license is granted.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 FEBRUARY AND FORECAST FOR 05 FEBRUARY - 07 FEBRUARY

1A. SOLAR SUMMARY
Activity: moderate

Flares Max Fadeout Begin End Freq. Sectors
M2/2B 1544UT possible lower South American/
Atlantic

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 03 Feb
Daily Proton Fluence >1 MeV: 2.3E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 6.8E+08 (high)
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Feb 06 Feb 07 Feb
Activity Low to moderate Low to moderate Low to moderate
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Feb: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field: no data available for Learmonth.
Global mid lat conditions were generally unsettled to active.

Estimated Indices : A K Observed A Index 03 Feb
Learmonth -- ---- ----
Fredericksburg 20 21
Planetary 20 20

Observed Kp for 03 Feb: 4443 4343
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Feb 20 Unsettled
06 Feb 45 Active to minor storm
07 Feb 35 Active to minor storm
COMMENT: Flares observed 3-4 Feb are expected to contribute to the
gemagnetic activity forecast for 6-8 Feb.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Feb normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Feb normal fair poor
06 Feb poor poor poor
07 Feb fair poor poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
04 Feb 12 near predicted monthly values

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
05 Feb 20 Near predicted monthly values
06 Feb -20 Depressed 10 to 20%/near predicted monthly values
07 Feb -40 15 to 30% below predicted monthly values
COMMENT: Regular Sporadic E layer observed on 4 Feb is expected for 5
Feb. Townsville frequencies: mostly near predicted monthly values.
Hobart frequencies: depressed 15-19UT. Degraded conditions are
expected in association with geomagnetic activity forecast for 6-8
Feb.

For the reasons you mention, I'd agree with you.

But I disagree that they should be eliminated from general use.

1552. Re: "Subcarrier" Radio Anyone?

Subcarrier radio has another FM carrier multiplexed onto the standard broadcast, usually at about 67 KHz. This signal can then be detected and received with what is sometimes called an SCA adaptor. Some stations, for example, broadcast Muzak, or stock info this way, and subscribers rent an adaptor to receive the signal.

Periodically, Pop Electronics type mags will publish an SCA adaptor article. You might look through old issues at your local library. Popular Electronics, Electronics Illustrated, Radio-Electronics, etc.

>VDC. I don't read any voltage on the output of the keyer. Thanks,
>Robert WD5AAT

I have the DOCs if you are interested in them...!

The original design for the Accu-Keyer output was for GRID BLOCKED
keying, not cathode keying. Therefore, unless you've re-wired the
outout, it's still set to key a NEGATIVE voltage to ground. I believe
the IC-720 is probably new enough to to be (essentially) cathode
keyed (e.g. it provides a POSITIVE voltage to be keyed to ground).

There's a 2N2222 (if I recall) which drives the 2N4888 output transistor
of the Accu-Keyer. If you connect the IC-720 key line to the COLLECTOR
of the 2N2222, it should (probably) key the rig with little problem.

If you want a copy of the DOCs, let me know.

> eligible to hold the call sign.

I wonder what the definition of "close relative" is? My mother's
brother (ie my uncle) was a ham in the 30's in Washington state.
He let his license lapse, but his call was never reissued.
I have a different last name. Can I claim his call if I have his
son's permission? (assuming I want to...I can't decide if I want
to be a W7 in 4-land....)

Is it just me, or do some of you others think this whole vanity
call-sign procedure will be chaotic?
I predict many will ignore the gates. I also predict there are
quite a few people out there who will try to claim the 1x2 call
of their mother's 3rd cousin in Omaha. Who is the gate-keeper
who decides whether a request is legitimate?

I hope it isn't too bad. I'm looking forward to having a call
that's easier to send in CW!

New Cellular vibrator. Now you can turn off the ringer on your cellular phone and be vibrated like a pager. Unit is smaller than a pager and clips on your belt. Wireless, just keep the phone with in 3 feet like in your laptop bag). Unit works with any cellular phone. $39 plus c.o.d. or send a check. e-mail me for more info.

Also, check out a nearby paging system. Those guys have BIG transmitters to pump out enough RF to fry your brain. Seriously, they do operate at high levels, there are usually several different transmitters at each site, and they do NOT transmit all the time (most do). Also, while an encoding scheme will "work", you did not specify a digital or spread spectrum phone. I also have and "encoded" phone, so I can keep people from using my line (yea, right), but I still get interference from other 46-49MHz phones in my area, and from fire dept still on lowband FM (very rare here in CO).

Hope this helps, although it probably confuses more. It is not easy to find, nor to eliminate.

Just got a 6 meter amp from mirage. The TR went crazy because there were various cold solder joints and an undocumented mod in the TR section. I was using it in the VHF test. Fortunately one of the other ops was a great tech who managed to get it working quite well by doing surgery to return it to the circuit in the schematic.

>think it's great.

I heard lots of folks calling CQ NR this weekend while at a friend's house (all I have here is 10m) and thought it was great. I just upgraded to General a few weeks ago and got my first opportunity to work 30 meters this weekend. I wasn't looking to work Novice Roundup specifically, but I was looking to make a contact and have a ragchew on 30M CW. I spend most of my time in the Novice portion of the bands anyway. Perhaps it's partially habit, but also enjoy helping others improve code skills while also improving mine.

One thing that really got my goat is that I tuned up on 30 meters and listened on 10.120 for a while. Hearing nothing I called CQ CQ CQ DE KE4DPX for a while. I finally got someone sending a question mark (I'm (I'm assuming he didn't get my call the first time around) and I'll be damned if someone else didn't fire up and start blasting 20+wpm code smack on top of us.

I think it's fairly safe to say the frequency wasn't being used -- I had sat on it for half an hour.

>
>It is a goal to consider, but quite frankly I'd rather collect
>QSL cards over computer printouts or diskettes anyday....

I have to agree that some percentage of QSOs will have inaccurate information. I can look in my own logbook and see a sprinking of QSOs that I made but forgot to record complete information, or missed the call. I operate in an apartment so get lots of interference when the computer is on so I log on paper, then transfer the information to the computer logbook later. As an example, my third HF contact was made with KC4HHU in Dade City, FL on 28.120 sometime between 101894 and 110194. Exactly when I don't know because I was still so nervous I forgot to record the date and time. A little bit later I made contact with KC2PG on 28.130 in Dewitt, NY. Must be nerves again, because I copied KE4DPX DE KC2PG K and recorded his callsign as KC2PGK. It took me a few days to figure out my mistake.

In the first case I can't do a proper QSL because I don't have the appropriate information. I'm sure I can write Art and get the information from him.

However, there are certain other types of problems that could be handled by "electronic filing" that can't be handled with paper QSOs. I have made contact with folks with "brand spanking new" callsigns that aren't in the callbooks. Thus it'll be upwards of a year before I QSL because I don't have an address to send the card to.

Another consideration toward electronic filing of QSLs to the ARRL or other awards tracker is cost. It is much cheaper to send a disk or paper copy of a log quarterly, semi-annually, or annually than to send an individual QSL. On the other hand, how many people like receiving QSLs in the mail?

Quite frankly, I think there are tradeoffs in both directions but I think the personalized QSL is here to stay.

Stick with it, it really is an enjoyable hobby. I also started with the
Technician license, then upgraded to Tech Plus and later to General. I
plan to upgrade to Advanced next weekend (keep your fingers crossed).
I've generally found the people on the air to be very curteous, kind
people willing to help in any way they can. Just keep saying to yourself,
"Internet isn't amateur radio." ;-)

It looks to me like this is the case of one person with a cross to bear
and he probably goes well out of his way to find fault with Technician
class operators. His time would be better served by helping those newly
entering the hobby as an elmer. Instead he'd rather waste his time -- and
ours -- by bitching and moaning. His loss.

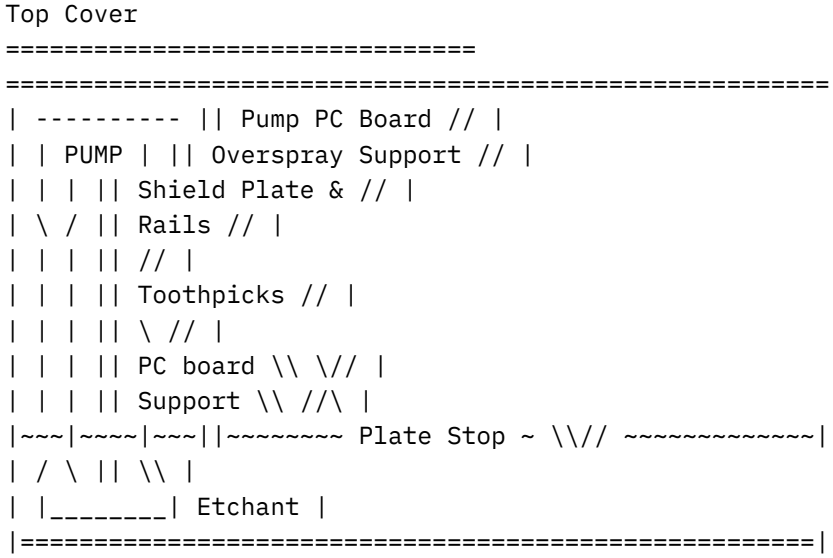
1566. PC BOARD ETCH TANK 2/2

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-05 11:19:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.23283.7585.0NFB9177@woodybbs.com>
Source record: 252569

>>> Continued from previous message
11. TOP COVER

Finally (whew!) cut a plexiglass plate to cover the top of the tank, from the end opposite the pump to about 2" short of covering the vertical Pump Overspray Shield. This, you can just lay on top of the tank when you are working. It helps to reduce (BUT NOT COMPLETELY ELIMINATE) the amount of overspray from etching.

Top Cover



This completes the construction of the etching tank and system.

Now, here's how I set it up:

1. Fill a bucket with at least one gallon of fresh water.

2. Set up tank with the pump in one end and the PC board support plate in place on its support strips.

3. Place the pump (hose installed) into its compartment at one end of the tank.

4. Determine how high the PC board will need to be placed on the PC Board Support Plate for etching (normally just above the top of the etchant) and insert two round wooden toothpicks into the set of holes holes closest to the intended bottom edge of the PC board. Install the PC BOard Support Plate in the tank and rest the PC board on the support plate and the toothpicks.

5. Pour one gallon of ferric chloride into the tank.

6. Place the plexiglass cover on top of the tank.

7. GRAD HOLD(!) of the etchant hose (from the pump) and place the output end INSIDE the tank, between the top cover and the Pump Overspray Plate, aimed DOWN toward the bottom of the tank.

8. Plug the pump on and get the feel of the etchant as it flows through the tubing. Then play the etchant back and forth against the PC board, using the flow to 'wash' the etched copper away as it dissolves.

9. When etching is complete, unplug the pump and DO NOT allow the end of the tube to drop lower than the tank or all of the ferric chloride will siphon into your shoes!

Raise the tube to clear it of remaining ferric chloride and allow it to loop back into the tank, so the tank will catch any errant drips.

10. Carefully lift the PC board out of the tank and wash it lightly in the bucket of fresh water.

If the etching is not quite complete, replace the PC board and continue etching.

If etching is complete, drop the PC board into the water until you're finished cleaning up.

11. CAREFULLY lift the pump out of the tank, taking care to allow as much of the etchant as possible to drip INTO the tank.

Place the BOTTOM part (impeller) of the pump in the bucket of water. Plug in the pump and allow it to pump the water around in the bucket (and through the hose) for a while... until you're satisfied it's self-cleaned itself.

DO NOT allow the pump motor to come anywhere near the water. This should not be too difficult to do since the pump is about 10" high.

Unplug the pump. Remove it from the bucket of water and allow to air dry.

12. Remove the PC board support plate and toss it into the bucket of water.

Pour the etchant back into its original container.

Pour the bucket of water into the tank and use it to wash out any remaining etchant.

*** DONE ***

Actually, it's a LOT easier to DO than it is to describe.

Parting shots...

I found some PYREX (r) glass hot plate elements for a buck or so several years ago. I set one of them underneath my etching tank

with a SMALL amount of water (maybe a tablespoon) between the two glass plates to act as a heat conductor between the top of the heating element and the bottom of the tank. This allows my etchant to warm up to around 90-100 degress before I start etching. This step along cuts etching time to probably 30%-40% of the time required if the etchant were only room temperature. It's almost essential if you are using old ferric chloride! Any (safe) method of warming your etchant will be well worth the extra effort.

Ferric chloride reacts rather violently when it comes into contact with aluminum or concrete!! Exercise extreme caution any time you are etching. Ferric chloride not only etches copper, but it stains and can do harm to flesh if it's allowed to remain there to---

1567. PC BOARD ETCH TANK 1/2

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-05 11:19:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.23282.7585.0NFB9176@woodybbs.com>
Source record: 252570

Several years ago, I was asked to describe a PC board etching system which I'd built.

Since the subject comes up occasionally, I though it might be worth re-posting the desription.

In the following description, I refer to 'junk' 1/4" plexiglass. This is because I was fortunate enough to locate a local glass installation company which kept boxes of broken (and 'wrong sized') plexiglass on hand. I was able to buy substantial amounts of this 'junk' plexiglass for next to nothing. Even if you have to have to buy new plexiglass, it shouldn't cost much, since there's not all that much required for the project. Just about ANY thickness of plexiglass will work, it's just that 1/4" seems to be the most readily available thickness.

References to 'silicone caulk' or 'silicone glue' indicate the same material, just used for slightly different purposes. Clear or white silicone sealer (caulking) will suffice in either case.

TH> A dip in the etchant (warmed to about 90-100 degrees and sprayed
TH> onto the board, placed vertically in a small aquarium, does the
TH> etching in only a few minutes (compared to 20-30 minutes using the
TH> tried and true 'slosh' method).

CC>Please describe your "spraying" technique more fully, I hate "sloshing" my boards!

It's really pretty simple...

1. Go to your friendly neighborhood junk (or hardware) store and find a CLEAN, rectangular, 5-gallon GLASS aquarium (hereinafter referred to as 'the tank').

2. Even if the tank is new, seal (caulk) all corners and edges with ample amounts silicone sealer. If the tank is already sealed with silicone sealer, you probably won't have to re-seal it, but if you cannot see what type of caulking has been used at ALL corners and edges, or if you're not sure of how well it's been caulked, it's best to do your own caulking job.

3. Go to the hardware store and shop around for a water pump which has a long (8"-10") shaft with the motor on the top and the impeller on the bottom. I found an AMXCO (American Excelsior Co.) #578 pump which has a plastic body and impeller. The shaft is made of steel, so I disassembled the plastic body and completely coated the metal shaft with epoxy to keep the etchant from attacking the metal. Then I reassembled the pump. This is a bottom-feed pump with a 1/4" to

5/16" output port right above the impeller housing. The pump is not all that high priced (less than $25) and it has more than adequate power to push a lot of etchant around in the tank.

NOTE: I had originally tried a "Little Giant" submersible water pump in this application. While the pump worked quite well, it was FILLED with a cooling oil and, once overheated, the sealing gasket let go and I had an etch tank full of etchant mixed with cooling oil... ruining my PC board and my etchant. The pump I now use is quite a bit lower priced and works just as well... maybe even better.

4. While you're at the store, pick up about 4'-5' of clear plastic tubing which fits TIGHTLY onto the output port of the pump. Plan on using a small hose clamp to ensure that the tube fits securely onto the output port... I found that the pump can propel ferric chloride about 8'-10' if the tube comes off. In my case, that was just about 2 feet PAST where my wife (N0IJY) was keeping her winter clothes!!!! Tom was in trouble once again!

BE SURE TO CHECK YOUR HOSE-TO-OUTPUT PORT CONNECTION EACH TIME BEFORE YOU RUN THE PUMP!

5. PUMP OVERSPRAY SHIELD

Cut a piece of 1/4" junk plexiglass so it just fits inside the narrow width of the tank and so when it's flush (vertically) against the top edge of the tank, it gives a 1/2" space at the bottom (e.g. if the tank is 8"h x 9"w x 14"d measured on the INSIDE, the partition is cut to 7-1/2"h x 9"w.

6. Place the pump into the tank, up against one end and temporarily place the OVERSPRAY SHIELD not quite up against the inside edge of the pump (allow an extra 1/2" or so). You should be able to EASILY insert and remove the pump. The plexiglass is there to help protect (kinda) the pump from too much overspray of the etchant. Using a permanent ink marker (e.g. Sharpie), mark the intended position of the overspray shield and use silicone sealer to glue the shield into place, placing the plexiglass as high (vertically) in the tank as possible, to allow the etchant to run UNDER the bottom edge into the pump intake.

7. PC BOARD SUPPORT PLATE

Cut another piece of junk plexiglass to the width of the tank and about 10" long. This plate will be placed diagonally in the tank, so it can be longer than the tank is tall. This will be the PC BOARD SUPPORT PLATE on which the PC board rests as it's being etched.

Situate the PC BOARD SUPPORT PLATE on a diagonal from about 1" in from the top end of the tank (OPPOSITE of the pump) and allow the plexiglass to angle down at an angle NO LESS than 45 degrees toward

the bottom of the tank. Allow a 1" gap between the bottom of the tank and the plexiglass for etchant flow. DO NOT GLUE THIS PIECE IN PLACE! Use a permanent ink marker and mark (on the sides of the tank) the intended position of the top and bottom of the PC BOARD SUPPORT PLATE.

8. SUPPORT PLATE RAILS (on which the PC BOARD SUPPORT PLATE rests)

Cut two (6" x 1/2") plexiglass strips. These strips will be silicone glued into place (against the sidewalls) along the (BACK SIDE of the) marks you made to indicate where the PC BOARD SUPPORT PLATE is to sit. They will be best attached by running a fairly thin bead of silicone glue (caulk) along the length of one flat side of each strip and then placing it against the wall of the tank, pressing out as much excess silicone glue as possible.

Once the silicone glue for these two rails is set, CAREFULLY remove any excess glue which appears on the TOP (upper) edge of each rail. Excess silicone glue will not allow the PC BOARD SUPPORT to securely rest against the rails.

9. SUPPORT PLATE STOPS (against which the bottom edge of the PC BOARD SUPPORT PLATE will rest when in the tank)

Cut two (1" x 1/2") plexiglass strips. Lay the PC BOARD SUPPORT PLATE on the SUPPORT PLATE RAILS installed in step 9, and mark where the BOTTOM edge of the plate is resting. Then, silicone glue these two strips (against the sidewalls) at right angles to the long strips. These serve as the end stops for the PC BOARD SUPPORT PLATE, to keep it from sliding down to the bottom of the tank. These strips should protrude far enough in front of the SUPPORT PLATE RAILS to ensure that the PC BOARD SUPPORT PLATE cannot slip off them during etching.

10. Drill lines of (4 to 5) holes in the PC BOARD SUPPORT PLATE, starting about 1" from the bottom edge and continuing up to about half way up the height of the plate, in 1' increments. The holes will be for sticking TOOTHPICKS in, to use as PC board supports (bottom rests) when you're etching. Make the holes small enough that standard, round, toothpicks can be placed in them snuggly enough that the toothpicks will not fall out during the etching process. Toothpicks are used because they are cheap and easy to

Mark:

I'm not sure if this'll help at all, but here's how we did it...

--- text of a letter of reply to those requesting info ---

Thank you for your letter requesting additional information
regarding our successful effort to change our City's Tower/Antenna
Zoning Ordinance.

In the narrative which follows, while some of the intervening
meetings and incidents have been omitted, all the really usable
information is included.

Although it didn't make it into the QST article, when we made our
initial contact with the City Attorney, he was not all that
convinced of the benefits (to the City) of Amateur Radio and he was
(initially) totally unaware of PRB-1. at that first meeting, we
discussed the many and varied benefits that Amateur Radio had to
offer the City and I was able to enumerate a number of actual
events where local hams were directly responsible for life-saving
communications either for local citizens or for others throughout
the nation. I attempted to enforce the fact that Amateur Radio
communications are not strictly limited to our locality and that
hams require the ability to communicate "reliably" over sometimes
great distances. I wanted to make the point that "reliable"
communications were predicated upon the amateur's ability to
install antenna systems which would perform day after day and not
just from time to time.

I soon realized that, although it would have been nice to have the
City Attorney on our side, it was actually the Planning and Zoning
(P&Z) Board (and ultimately the City Council) that I had to
convince... all I had to get the City Attorney to do was to accept
the content of my petition to the P&Z Board.

As noted in the QST article, the existing zoning code made
virtually no accommodation for Amateur Radio towers or antennas.
It set a 35-foot maximum height for virtually all towers.

When I went into this task, I had no experience working with any
facet of city government. I was a real greenhorn. I made a number
of dumb mistakes, but I tried to learn from my mistakes. My first

mistake was that my initial submittal of a proposal to the City Attorney (and the P&Z Board) was just too vague. They wanted hard and fast dimensions for what I was requesting. They wanted justification for each measurement and it seems that they expected (for some reason) to be able to 'haggle' a bit regarding the measurements.

I found that I was somewhat unprepared at my first appearance before the P&Z Board. I went into the meeting armed with 33+ years of operating and technical experience, but no hard, cold facts. During the first meeting, I asked for a maximum tower height of seventy feet (70') only. However, the P&Z Board was not only concerned about tower height, but also such things as guying, base (and top) width, and tower quality and placement. It was obvious that they weren't anxious to see some ham install a 60' windmill tower in their front year and call it an antenna tower!

Although I'd originally asked for ONLY an ordinance change to permit increasing the height of towers and antenna supports, it was also obvious that the City wanted to place some limits on the size of antenna(s) placed on the tower.

By the time I walked out of the initial P&Z Board meeting, we had at least somewhat agreed on the general boundaries of the measurements to be requested:

Tower not to exceed 70'
Tower base section not to exceed 5'
Antenna not to exceed 50' for the longest element

I was directed to go back and do a better job of "crafting" my proposed ordinance and then re-submit it at a later date. I read the word "crafting" to mean ("get your stuff together this time and do it right!").

I contacted antenna manufacturers (Hy-Gain & Mosley) to obtain engineering data for their largest tri-band beams. Hy-Gain sent just what I'd asked for, Mosley failed to respond at all!!! Undaunted, I obtained a set of measurement specifications for the Mosley Pro-97 from a friend. The Pro-97 is the largest tri-bander I could find and with it's 40M elements, measures in at something just over 40' wide.

Using the information provided by the manufacturers, I sketched out a set of parameters which I thought would be generally acceptable by local hams and the City. Since it was obvious that more and more tri-banders were being offered with add-ons to turn them into 4-, 5- and even 7-banders, I chose to stay with my original estimate of fifty feet (50') as the maximum element length I would ask the City to approve. I felt I could back up this request by the fact that there were already existing "shorty-forty" antennas measuring in excess of 40' and that a full-sized 40M yagi was in

excess of sixty-five feet. Thus, fifty feet allowed for some expected "new" designs which might fall between the two extremes.

I also contacted several manufacturers of towers (Unarco-Rohn, Telex/Hy-Gain and U.S. Tower). All three manufacturers immediately responded to my request with usable data.

The information provided by the tower manufacturers indicated that, for a seventy foot (70') tower, a maximum tower base width of 32" would be adequate. My gut feeling from my initial meeting with the P&Z Board was that they really would have liked to reduce my estimated maximum tower base width of five feet down to something substantially less. Since I still wanted a 'sacrificial lamb' to give them in case they wanted something to 'haggle' over, I used my original estimate of a 5' base width, knowing that I could reduce it to at least 3' and still have several inches to work with if necessary.

I made copies of selected pages from data sheets provided by the manufacturers. I copied the tower pages which showed only '70 (and above) towers and antennas which had only three elements but which did include the 40M add-ons. I also included Rohn's guying charts for their towers so the P&Z Board members could see that guyed towers (if properly installed) were quite safe.

Together with the copies of the manufacturer's data I bundled copies of the ARRL's Antenna Height vs. Communications Efficiency study and selected pages from the PRB-1 document (liberally marked with highlighter). I wanted to give the members of the P&Z Board enough to chew (but not enough to choke) on.

At a subsequent meeting of the P&Z Board I presented my data packets and my new proposal which had been accepted by the City Attorney. The requested dimensions were the same as those we'd worked out at our first meeting:

Tower not to exceed 70'
Tower not to exceed 5'
Antenna not to exceed 50' for the longest element

1569. Examples of "Ham Frie 2/2

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-05 13:27:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.23285.7585.0NFB9179@woodybbs.com>
Source record: 252572

>>> Continued from previous message
The P&Z Board accepted the requested tower height (70') and
(surprisingly) the maximum element width (50') with no complaint.
However, they were still concerned about the physical width of the
tower and that someone might install something which they did not
consider appropriate. We finally agreed on the following set of
measurements:

Tower not to exceed 70'
Tower not to exceed 36" at its base, 24" at 30' from
the base, and 12" at its top.
Antenna not to exceed 50' for the longest element

The modified proposal was to be re-typed and sent to the City
Council for approval.

Apparently due to lack of time to re-type the proposal, and due to
some last-minute "suggested changes" by the City Planner, only pen-
and-ink changes were made to each copy of the bill when it was
presented to the City Council.

The "suggested changes" made by the City Planner were so
restrictive that they were obviously intended to "kill" any benefit
gained by the bill and to return total control of all tower heights
to the P&Z Board of Adjustment (where Board approval would, again,
be required for each installation).

Prior to our presentation to the City Council, we made more
informational packets for all Council members. These packets
included information which we thought they needed to make an
informed decision:

PRB-1 (on top of the pile)
Copies of court decisions where Hams have taken their
municipalities to Court and won. I made sure that the cases
were the municipalities were ordered to pay court fees and/or
damages were placed first in this group of documents.
Copies of the ARRL's Antenna Height vs. Communications
Efficiency study
Copies of letters of endorsement from a number of local civic
and emergency-preparedness groups:
Local Hospitals
State Emergency Management Agency
State Health Department
Local citizens who have benefitted by communications
provided by local Hams (eg. San Francisco quake Health &

Welfare traffic, etc.)
Red Cross
We had many other sources, but we felt that quality was
more desirable than quantity. In retrospect, I think
that BOTH quality and quantity may be desirable, with the
letters representing quality placed at the top of their
pile.

I hand-carried the informational packets to each councilperson and
used it as an opportunity to talk further with them. I made them
aware that national precedent had already been established and that
if adequate accommodation could not be agreed upon, somewhere down
the line, some ham would probably initiate a legal proceeding
against the City, and that this was exactly what we were attempting
to avoid by addressing the problem now. I directed their attention
to highlighted passages in each informational packet and discussed
any questions they had. The meetings were quite productive.

When it can time for the actual consideration of our proposed bill,
it appeared that several of the Council members were somewhat upset
that the City Planner had introduced his own set of "suggested
changes" (remember them from above?). I think they felt that this
was a direct attempt to circumvent the work of the P&Z Board.
There was some discussion among the council members regarding which
of the (now two sets of) pen-and-ink changes to my original bill
were current. Somewhere along the process, one of the Council
members made a motion to accept the unaltered proposal (I think due
to the feeling that both sets of changes originated with the City
Planner). The motion was seconded and voted unanimously with no
further discussion. Not only did we get our antenna zoning
ordinance, we got it as originally proposed!

73 ES GL with your efforts.

I am looking for recommendations for a new 2m/70cm dual band mobile rig. In addition to the normal features that one finds these days, I am looking for a good packet capability. Since this does represent a major investment, I would like to have the capability to grow to 9600 baud packet. Any recommendations or comments?

Thanks in advance.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1KSZ, NA2M, WB2RAJ, K3TLX, KA3DBN, K4CEF & Southeastern Cluster Group, N4PYD, W4VQ, WD4KXB, KH6GMP, N7VEW, W7MAP, DF4RD, OH2BVE, VE3JLP and DL7VEE the DXNL for the following DX information.

C5, THE GAMBIA. Paul, VE3JLP (DX Editor of The Canadian Amateur Magazine) will be in The Gambia for a week, February 10-17th. He has applied for a temporary licence and hopes to operate from the Agricultural College there where a group of VE1's left an HF station last year. His operating time will be limited as his prime reason for the trip is to visit his daughter who has a 6 months teaching contract at the college (He just learned that the ham station is in her office!). QSL via VE3JLP.

C6A, BAHAMAS. Larry, K3TLX, will operate from February 12-21. Larry will be a Single Op entry in the ARRL DX CW Contest. His callsign is unknown. He will operate all HF bands during the week before the contest. QSL via K3TLX.

CARIBBEAN TRIP. John, KA3DBN, will be active from Aruba as KA3DBN/P4 from March 11-18th. Activity will be on all bands, CW, SSB and possibly RTTY. Enroute back to the frigid Northeast, he will be stopping and operating from Anguilla (VP2E) as VP2EBN and /PJ7 on St. Maarten. QSL via his CBA or bureau.

DXAC NEWS..... Garth Hamilton, VE3HO, has been appointed chairman of the DX Advisry Committee (DXAC)..... The ARRL DX Advisory Committee voted 8 to 7 to reject a petition to add Pratas Island to the DXCC Countries List based on Point 2(a), separation by water. Some of those voting against cited concerns over the possibility of intervening rocks. Others cited what they perceived as disputed ownership of the island.

PJ7, ST. MAARTEN. K7CI and W7MAP will be active from March 1-8th. Operations will be mostly CW, except for the ARRL SSB CONTEST.

POSSIBLE DELETIONS IN WORKS? There was an article in the Honolulu paper a couple of weeks ago, in which the headline read: "STATE MAY GET JOHNSTON ISLE", subheadline was "GOP PROPOSAL ALSO INCLUDES PALMYRA, MIDWAY". The main meat of the article says that a Republican proposal House Resolution H602, was introduced in Congress (in Washington) to extend Hawaii jurisdiction over four more islands, two atolls and a reef with a patch of sand 133 feet long and an underwater footprint that stretches 9 miles. Added to Hawaii would be: Baker and Howland, Jarvis, Palmyra Atoll, Kingman Reef, Johnston Atoll and Midway. The whole package contains only 7 square miles of actual land or sand, but it would give Hawaii 322,000 more square nautical miles. Except for Palmyra, all the land is Federal land. The bill was introduced by Rep. Elton Gallegly, R-Calif, the Rescources subcommittee chairman.

QSL MANAGER CHANGE. Adam, N7VEW, informs OPDX that Chuck, AB7BB, will be taking over as QSL Manager for both 5V7MD and TJ1JR. All cards that were sent to Adam will be forwarded to Chuck. Address for AB7BB is:
Chuck Degard, 919 W. Vaughn St. , Tempe, AZ 85823.

ST2AA, ST2/G4OJW AND ST0K CARDS (UPDATE). Dick, WB2RAJ, has reported that the logs have arrived from Sudan and the QSL cards have arrived from his stateside printer. He is currently busy sending out cards to those who have already sent for requests. He has the logs for the following:

ST2/G4OJW - from September 17, 1993 thru October 26, 1993. W7KCN also has a copy of these logs. To confirm any of these contacts QSL direct to WB2RAJ or W7KCN.

ST0K - from October 26, 1993 thru September 6, 1994. To confirm any of these contacts send direct to WB2RAJ.

ST2AA - from January 21, 1994 thru December 31, 1994. To confirm any of these contacts send direct to WB2RAJ. Any requests for cards that were sent to WW1V have been forwarded to WB2RAJ.

Dick states that all three stations are good for DXCC credit for the Sudan. Most of the QSL card requests sent direct to Sudan for the 1993 and early 1994 contacts never got through - for various reasons. Dick says he appreciated everybodies' patience.

TN, CONGO. German members/friends of NODXA are now active as of February 4th and will continue to be active from here until about February 29th. The group (Fritz, Holger, Tom and Birgit) arrived in Brazzaville on January 26th. After a 10 day delay in receiving their licenses the callsigns being used are: TN4U for CW and TN2M for SSB. By the time you read this the team hopes to have all of their equipment up and running. Frequencies will be plus or minus the usual DX frequencies and QSL to DL7VRO.

VP2M, MONTSERRAT. Members of the Woodbridge Wireless group of Virginia will operate the ARRL SSB DX contest March 4-5 as VP2MFM, in the multi-two category. They will be active on CW, RTTY, and 6 meters before and after the contest, March 1-6th. Operators are WB4NFS, WD4KXB, KJ4VG, KA4RRU, KO4FM, W2HPF, and W4MYA. QSL to Denis Catalano, WD4KXB,

14453 Alps Drive, Woodbridge, VA. 22193.

XE, MEXICO. Oiva, OH2NSM, and Heikki, "Henry" OH3JF, will be active from Cancun, Yucatan. It is almost the eastern most point of Mexico. Their expected stay in Mexico is February 10-20th. Their purpose is to provide zone 6 for WAZ-hunters. They will concentrate on working low-bands and Europe. Main operation bands are 160, 80, 40 and 30 meters and mostly CW. Other bands will be activated as time and propagation permits. Both OH2NSM or OH3JF are inexperienced DX-pedition operators, "so PLEASE be patient. They will operate 7 kHz above the band edges for CW, and on SSB they will operate on normal DX-frequencies. QSL information will be given later.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

1585. HOAX against AmSoft

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-05 21:49:11 UTC
From: amsoft@epix.net
Message-ID: <3h3h4n$sev@grape.epix.net>
Source record: 252487
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.space

I question if the person called bob@texas.net really exists or if it was just a HOAX and a campaign by a spineless internet hacker to damage the AmSoft reputation.

I submit the following information and request that you as an individual test the information for yourself.

On 2/5/95 I did a FINGER on bob@texas.net and received the following information:

>--- Host: texas.net User: bob@texas.net ---
>Login name: bob
>In real life: Robert J. Scott
>Directory: /home/b/bob
>Shell: /bin/menu
>Last login Fri Jan 20 20:39 on ttyrc from sa-pm1.texas.net
>No unread mail
>No Plan.

Take a look at the LAST LOGIN DATE!
(Last login Fri Jan 20 20:39 on ttyrc from sa-pm1.texas.net)
So how is it that bob@texas.net has managed to post so many messages in the rec.radio.amateur.* usenets as bob@texas.net since Jan 20 and texas.net's finger has no record of it?

Take a look how he connected thru TEXAS.NET ON JAN. 20, 95
(on ttyrc from sa-pm1.texas.net)
Is sa-pm1 a code for SPAM?

It looks like the wool has been pulled over our eyes on this story.
Even the FCC records for WY7O don't correspond to the Texas area.
Whoever you are pretending to be WY70 we are onto your HOAX.

FYI, AmSoft has not posted any reference to it's products since January 27th and will not post reference to AmSoft products in the future except for the rec.radio.swap usenet, and in the amsoft signature when responding to usenet messages.

To all readers of the rec.radio.amateur.* usenets AmSoft posts this public apology to anyone that became annoyed by any aspect of the continuing posts by or about AmSoft and its product.

I request that nobody post a response to this article unless they intend for their message to appear in all 7 rec.radio.amateur.* usenets (read header of this message first)

Sincerely,
Pete, KC3TL

1586. 9Z2ZZ Address?

>
>
>

I purchased my FT-530 last November, so have had it only 3 months, but
have used it much in that time. It's a nice little radio, and I am mostly
pleased with it. There are several glitches, but no equipment is perfect
(though we want it to be...)

Upside

The radio has several nice features that I particularly enjoy.

1. The illumination lamp lights the keypad. Many handhelds don't have
this, and I'm not sure how one would change a setting on a complex
handheld without it.

2. The illumination lamp can be set to stay on the entire time the radio
is on, which really helps at night. You don't have to hold the light
on while you are jumping around frequencies, or just watching the
radio scan, etc...

3. This is a biggie. It has what's called ABS (Automatic Battery Saver).
The radio can be set to sample the dialed-in frequency at several
rates ranging from many times per second to over one second between
each sample. This SIGNIFICANTLY reduces battery drain and extends the
life of the batteries. But the nice part is that you can set the
radio to automatically adjust the sampling rate based on how long the radio
has been idle. (i.e. the longer the radio sits, the longer the
sampling rate and lower the battery drain).

4. The radio is fairly small in size (except when compared to the FT-51R
and likes).

5. A Ni-Cad charger is contained IN the radio (unlike the FT-470). To run
the radio off 12V, just plug the radio up to 12 Volts, and the radio
will charge the battery pack as you operate. (However, the plug is an
odd size and you may be better off purchasing the Yaesu cable for +-$20..)

6. The display can be configured to show the battery voltage continuously
as you operate, so you can see the state of your battery. Really enjoy
this feature...

7. You can receive the aviation band (I'm a pilot and this is useful to me)..

8. The radio will scan to find the PL tone of a repeater (useful it you don't know what the tone is...)

Downside
----
1. When certain frequencies are tuned into the radio, they conflict with each other. For example, 162.400 on the 2m side, and 441.450 on the 440 side will produce a full-deflection signal on the 440 side, generated by the 2m side, with or without the antenna. This is only a problem if you to use those 2 frequencies at the same time. Has to do with Intermediate Frequency interference internally. Yaesu said that that is just the way it is. (I sent my radio in because of this). My FT-470 does this also, BTW, but not as bad.

2. If the non-active side of the radio is scanning while you are listening to a signal on the active side, there is a slight click each time the scanning side changes frequencies. Very *slight* problem.

Don't know much about the technical aspects (harmonic distortion, etc.), but I get a clean signal out with no problems.

I could go on and on. If you want to know more, let me know by E-Mail...

KC+Notwithstanding the advice above, you may find frequency plans in Ham
+Radio Today magazine (Scanner section) from time to time. There are also
+LOTS of scanner books which give out detailed listings.

KC+Regards,

KC+Kwong Li, G0TOY

Hi Kwong

Where are you located???? I notice you have got a "G" amatuer call,
but your name seem to suggest that you may have Hong Kong or Chinese
orgin.

Are you operating on 40 or 80 m??? When (most likely)????. I will
listen out for you, if you give out your usual freq. and time.

I have been operating with GM call for 5 years now, and I have Korean
background. Would be nice to have a good QSO with you. Thanks..

73 de Yong

Mike,
As I posted to Bob Scott can we please let this go. The bandwidth
wasted on this debate could have posted the entire catalogs from
HRO or AES. Pete said he was just going to post in forsale from
now that should be good enough. 73 de Jerry

1591. Once again, the League shafts Hams (Was: Vanity call sign order)

>> eligible to hold the call sign.

Great. The League shafts amateurs again. Thanks to this gem, we now
end up with no-clue CBer's without HF access holding W and K-prefix 1x2
calls.

Utterly ridiculous. If you want a corpse's call, fine. But you should at
least hold an equivalent license class or above.

Boy Pete, you really are a newbie without a clue as to how the net
works or how networks in general function, aren't you? Your whole
posting had me laughing. I hope your programming skills are better than
your understanding of networks, for your company's sake.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS NEWS BULLETIN 844 5/Feb/1995

Sunday Transmission Schedules.
3.545 MHz (Plus/minus 5) 0930 UTC VK2BQS (Jim)
7.045 MHz -3 0030 UTC VK2CTD (Col)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (Alan)
14.091 MHz 0030 UTC VK2BQS (JIM)
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2AAB
146.675 MHz (rtty mmbbs/repeater) VK2RTY

Views expressed in this news bulletin are not necessarily those of the Broadcast Officer, the Relay Officers, or of the Society.

OPERATOR(S) WANTED..... This is a personal appeal.....
==========
VK2BQS most probably will be closing down at the end of May 1995 due to a change of QTH...

The station may resume transmissions by the end of August but with a very limited antennae system, so after eight years of regular relay transmissions of the ANARTS NEWS ex VK2TTY, my service will cease. It in fact started on 1st March 1987 when I commenced a direct relay from VK2JPA in on 2 metres and out on 20 metres.

At times it has been very hard work, especially when equipment failures or disastrous weather conditions intervened, but it has been a period of great enjoyment and I have worked well over two hundred Cast viewers in that time, a few were itinerants who were just passing through, a number were casuals who I met years ago and still call in from time to time. A large number were sporadic, they appear regularly for a few weeks and then disappear only to return and again join in the call-backs. And there are the regulars who have turned up almost every week regardless of weather, sunspot cycles and I don't doubt the occasional irate XYL..

All of those who call-in or call-back to the cast do make a contribution to the operation, as the operators can gauge the efficiency or otherwise of their efforts to combat the variations which occur in propagation, antennae and equip-

ment; without an idea of the results achieved, we may not even be getting out of our own backyard hi.

And most importantly, it has been a friendly operation and I feel that I have many real friends throughout the area in which my signal has been reported, and that friendliness I will miss, so thanks to all of you who have been so very generous in human terms over the years...

It may seem early to be writing a farewell message, but the time is flying by, and although there is four months before the switch must be pulled (assuming plans do not gang awry) it is time to call for replacement volunteers. I am sure that there is a viewer, or perhaps two or three, who would be willing to take on the task as relay officer. It needn't be a Sydney resident and it is not necessarily imperative that it be a 20 metre operator. The Broadcast Officer will adjust the jobs to fit the toilers, so if you are at all interested, contact Pat, VK2JPA whose phone numbers etc are available elsewhere.

The only essential is a reliable means of communication with one of ANARTS officers, currently there are three of us who ensure that each relay station has the cast on disc before X-mit time. Our experience with VK6 where the Newscasts go out at the same time as do those in VK2, is evidence that it can be done. To provide VK6CW with the necessary data on or before time, we have used over the years ARQ, PACKET V ROSE, and Phone Modems, and way back, even direct from air retransmissions. At the present time we find Phone Modems and the ARQ are the most reliable...Pactor should be even better....

So please, anyone who feels they can help, contact Pat VK2JPA or Col (Pres.) VK2CTD so that early planning can be done.

Our coverage is from Tonga to the east, to Penang and Sourabaya to the west and includes New Guinea, Fiji, New Zealand, Noumea, and we even had a call from Benin once..... Within Australia it ranges within an area bounded by Hobart, Gawler, Perth, NW Cape Humpty Doo, Friday Island, Bowen, Gladstone, Brisbane, Sydney and Sale with dozens of places in between---- and you can't get bigger than that.....So be in it, with the sunspot cycle about to go on the upturn, it should become very rewarding...

73 to all and hope to hear from you... Jim VK2BQS.

FIRST ANNUAL ADRS WORLD-WIDE DIGITAL WPX CONTEST PART 3
4TH-5TH FEBRUARY 1995

LOW POWER SECTION: (SINGLE OPERATOR ONLY)

OUTPUT MUST NOT EXCEED 150 WATTS. YOU MUST INDICATE LOW
POWER ON THE SUMMARY.

AWARDS:

CERTIFICATES WILL BE AWARDED TO THE HIGHEST SCORING STATION
IN EACH CATEGORY LISTED UNDER SECTION IV OF THE RULES.

1. IN EVERY PARTICIPATING COUNTRY.

2. IN EACH CALL AREA OF THE U.S., CANADA, AUSTRALIA AND
JAPAN.

3. ALL SCORES WILL BE PUBLISHED. HOWEVER TO BE ELIGIBLE FOE
AN AWARD, A SINGLE OPERATOR STATION MUST SHOW A MINIMUM
OF 12 HOURS OF OPERATION . MULTI-OPERATOR STATIONS MUST
SHOW A MINIMUM OF 18 HOURS.
PLAQUES WILL BE AWARDED ONLY TO SERIOUS CONTEST EFFORTS.
DECISIONS OF THE CONTEST CHAIR ARE FINAL. A SINGLE LOG
IS ELIGIBLE FOR A SINGLE AWARD ONLY. IF A LOG CONTAINS
MORE THAN ONE BAND, IT WILL BE JUDGED AS AN ALL BAND
ENTRY, UNLESS SPECIFIED OTHERWISE.

To be continued : LOG INSTRUCTIONS NEXT WEEK

IPS WEEKLY REPORT
----
27 JANUARY - 02 FEBRUARY

DATE OF ISSUE: 03 FEBRUARY 1995

INDICES:

DATE 27 28 29 30 31 01 02

1594. Re: True CW

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 00:00:43 UTC
From: jeffrey@math.hawaii.edu
Message-ID: <D3JxD7.JzK@news.hawaii.edu>
Source record: 252496

In article <3grbrb$eqc@abyss.West.Sun.COM> myers@Cypress.West.Sun.Com writes:

>Gee, Jeff, I guess the effort required to tune a RTTY system on the
>correct frequency, run the correct data level, and figure out which
>data speed, shift and encoding (ASCII vs Baudot) are in use count for
>0.

Hi Dana: I worked RTTY for years in the Coast Guard and found no challenge in it. And it was effortless to train new ops - a set of step-by-step instructions was all they needed. It really didn't require any skill other than a minimal reading comprehension. Please don't try to equate or even compare the skill required to work CW with RTTY. Also, keep in mind that we had it a lot rougher than today's hams do - our equipment were dinosaurs (used Navy TTY gear) compared to today's plug-and-play rigs.

This is not meant to be condescending towards those who choose to work with RTTY equipment; in fact the simplicity of communicating with it might be why some are attracted to it. What I'm discussing is the effort required to run the equipment, not the intellect of the person sitting in front of it.

>As for satellite, I suppose the ability to determine the correct
>uplink and downlink frequencies, correct for inverted passbands,
>correct and track Doppler shift, and verify the correct power level
>is in use counts for 0.

Dead easy. We come into this hobby with the ability to read. No other skill is needed to do satellite work.

>Then comes microwave. Since most of the microwave enthusiasts I've
>talked to have to build most of their gear, either from surplus
>pieces or entirely from scratch, you can't discount the skill
>required to build equipment.

Now Dana, my original statement centered on *operating* the above stated modes. I specifically excluded the skill necessary to construct the equipment. How could you have missed that?

You know my feelings about the lack of building expertise among the ham community today. Recall the simple transmitter circuits I posted over on .homebrew a year or two ago trying to encourage folks to get interested in picking up a soldering iron. Your response to those projects was entirely negative (the circuits were late 60's designs but modern-day transistors could easily be substituted for those that were unavailable).

Oh, here's what I said about building:

>>Note that I am not discussing the skill required to build equipment
>>for said modes. But so few hams build their own gear today that I shouldn't
>>even have to add that disclaimer.

>The bottom line is this: naively denigrating operators of modes other
>than CW does nothing, nothing at all, to point out any advantages of
>CW. The assertion "CW is the only mode that requires skill" suggests
>the speaker has not operated RTTY, satellite or microwave at all, and
>therefore brings into question the validity of the original assertion.

Some folks are attracted to easy-to-operate modes that require little
skill. You're concluding that I feel this attraction says something
about the person. That was not my intention, but as usual you try to
attribute some obscure negative connotation to my statements.

Go have a beer.

>I'm not certain how denigrating other radio amateurs helps build
>up the amateur radio service, anyway.

Huh? Denigrating other hams? How did you distill that from what
I said? Forget the beer, go eat some prunes instead!

1595. uk.radio.amateur FAQ - where to find it

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 00:27:19 UTC
From: Paul@topsy.demon.co.uk
Message-ID: <792030439snz@topsy.demon.co.uk>
Source record: 252497
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

The FAQ for uk.radio.amateur is currently too large to be (sensibly) posted
to usenet. It lives at its ftp archive ....

Site: ftp.demon.co.uk
File: /pub/ham/uk-radio-amateur-faq
Format: plain text

or

Site: ftp.demon.co.uk
File: /pub/ham/uk-radio-amateur-faq.zip
Format: PKzip 2.04g compressed version of text-formatted file

The FAQ addresses all common queries in uk.radio.amateur concerning amateur
radio in the UK *including* "Is the RSGB on Internet?" and "How do I apply
for a recipricol licence?"

If you have difficulty with FTP then mail me.

1596. Antenna Suggestions? (ICOM 2700/Larsen Antenna)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 00:43:47 UTC
From: hdshrinkkr@aol.com
Message-ID: <3h3rc3$398@newsbf02.news.aol.com>
Source record: 252498

I currently have a ICOM IC-2700H installed in my 1994 Volvo 850 Wagon. I had a Larsen glass mount antenna installed on the front windshield and was reasonably pleased with the reception. My one problem was the antenna keeps becoming "unglued" from the glass whenver the outside tempeture drops below 32. I am now considering biting the bullet and drilling a hole for a roof mount antenna.

First, I am looking for suggestions on type, mounting location, manfactuer, etc.
Second I was hoping someone may have already installed this antenna and overcome the problem with the cold, how about it, anyone?

Third, the windshield glass as well as the side windows have a series of black dots at the border of the glass, will these interfere with the use of a glass mount antenna, and if so, how much?

Fourth, what would be the best setup to use, i.e. best antenna, best mounting type, etc.

Thanks for your time in reading this,
Bruce

1599. Re: Repeater Directory online/CD-ROM?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 01:03:42 UTC
From: pergrim@aol.com
Message-ID: <3h3she$48a@newsbf02.news.aol.com>
Source record: 252501

In response to your questions about repeater CDROMs:

PerCon Corp , currently known for its FCC Frequency Databases & Spectrum, will release a CDROM Ham Callsign Database and Open Repeater Database in March. This product will be DOS,WINDOWS and MAC.The price will be $19.95 for both databases on a single CDROM. PerCon is also working on a series of AVIATION related databases. These are AIRCRAFT REGISTRATIONS, AIRMEN LICENSES, and SDR (Service Difficulty Reports) all on a single CDROM for $49.95. Others will follow soon afterwards.

For more info ,call or fax:

1602. Dan's Atari Lynxlist! (trade, sell & buy games & accessories)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 03:42:37 UTC
From: SA073@getty.onu.edu
Message-ID: <SA073.285.2F359AAD@getty.onu.edu>
Source record: 252506

Games are listed in all capital letters, to distinguish them more easily from names and addresses. There are 3 simple things to remember when listing your games. $ means for sale, = means for trade, and ! means wanted. For example, if I wanted to sell Joust, I would write it like this in my list: $JOUST$, and if I wanted to trade joust, it would be =JOUST=, but if I wanted the game, and did not have it, I would write it at the end of my list, !JOUST!. In fact, please put all of the games you have for sale, for trade, and the games you want at the end of your list. It will make it easier for everyone to find, and also for me to change as games are sold, traded, and bought. Also, if you happen to have a game you would either trade or sell, instead of writing it twice, just write it once and put both marks around it, with your preference closer to the name of the game. For instance, if you wanted to sell, but would also trade, you would write it as =$JOUST$=, and if you would rather trade, but might sell, you would write it as $=JOUST=$. I hope this simplifies the list a little bit.
In each case, the games are located below the name and address of the person who has or wants them. Keep in mind that a person may sell a game that is for trade, if you offer enough. Or they may trade for a game other than the one they wanted, if you can work out a deal with them. Feel free to include any games you own or other info in this list.

There are now 61 Atari Lynx owners in this list. If you are one of the
first few people without a name, or with part of your name missing, please
take the time to e-mail me so that I can fill in the missing information.
Also, if you want to include any other information, feel free to do so.
I have been thinking of adding something to the end of this list. Perhaps
some type of game review would be useful? I have only played about 10 of
the almost 80 games available for the Lynx. Although I think that Nick's
game ratings are helpful, they do not give a good overview of the reviewed
games. I was thinking about adding some type of overview at the end of the
Lynxlist. I'm not sure what to call it, but that's what it would be about

anyway. Some of you could do quite a few reviews, it looks like. So, do any of you like this idea? The review could focus on 1 or 2 games. You would have your name attached at the bottom of your review, of course. I think I would put Nick's game rating of the game at the top, and then follow that with the review(s) of the game(s). Reviews should be about a paragraph, and tell specifically what you liked or did not like about the game, it's replay value, sound, etc. If enough people write back and think this would be a good idea, I'll incorporate it into the posting of this list.
Hope you enjoyed everything, and I hope you find this list useful. If you sell a game or anything, let me know so I can update the list.

Dan Woodard

Dave Blaschke, W5UN, will be the guest on Sunday's Ham Radio & More
Show at 6:00pm EST. Dave is the first to get DXCC on 2meters, using,
of course, EME, moonbounce. Dave's antenna array is unbelievable, as
is the radiated power he puts out. If you want to know more about
moonbounce, or how to get DXCC on the 2meter band, don't miss this
show!

>
Greg,

It appears not to have come out the way I ment it to. I always place a 60 amp fuse
right at the attach point to the battery of the radio positive lead. I also
leave the regular radio fuses intact. So the positive lead itself is fused with a
60 amp fuse in the event it gets grounded to the vehicle body. Most
automobile batteries can supply up to 400 amps of current at any time.
This can weld two pieces of metal together or start a nice fire in the auto.
The radio is still fused by the correct size of fuse the manufacturer requires.

1606. Re: T-Hunt Mailing List????

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 04:32:25 UTC
From: homingin@aol.com
Message-ID: <3h48op$936@newsbf02.news.aol.com>
Source record: 252509

Yes, there is a T-hunt mailing list. It's called fox-list and is maintained by the Boston Amateur Radio Club. Subscribe in the usual manner, a message to listserv@netcom.com with one-line text "subscribe fox-list" (without the quote marks). Nothing is needed on the subject line. More infor in Homing In column in February 1995 issue of 73 Magazine.

1607. Database for vanity calls?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 05:16:01 UTC
From: tigger@prairienet.org
Message-ID: <3h4bah$s5b@vixen.cso.uiuc.edu>
Source record: 252510

Hiya-

I'm considering getting a new call thru the vanity call program. My question is basic: How do I know what calls are available? Surely there must be a better option than going thru the callbook manually and seeing what is and isn't listed.

Also, any idea on how the application process will work? Supposing I want W9XYZ, and somebody else's request for it gets honored first. Will I get bounced to the end of the list, or will I be allowed to list several calls I'd like in order of preference, and they give me the first one that's available?

Thanks for any info. 73,

Sean

Seems this guy may be fishing for something else.

I sent him a reply and heard nothing back. Corse, was not
too helpful either.

One thing odd, wondering why this kind of message came out
of a mot (motorola???) site....

1612. New Zealand Operation.

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 10:49:42 UTC
From: walker_cm@ix.wcc.govt.nz
Message-ID: <3h4us6$psp@golem.wcc.govt.nz>
Source record: 252515

Short term licence/operating information for Visitors to New Zealand adapted from information published by NZART.

Any overseas amateur visiting New Zealand may be permitted to operate while visiting this Country, under the following conditions:

1. Operation is confined to amateur bands above 144 MHz.
2. No application need be made to the Ministry of Commerce.
3. No fee is charged.
4. For a period of not more than four weeks.
5. They should be able, if necessary, to satisfy the Ministry of Commerce, Radio Operations division that they hold a current licence and/or certificate equivalent to the N.Z. Limited or General qualifications, valid for the term of their visit.
6. A copy of their current licence and/or certificate must be carried whilst in N.Z.
7. Usage meets the requirements of the N.Z. Radio Regulations 1987, and conforms to the terms, conditions and restrictions applying to amateur apparatus operating in N.Z.
8. They operate using their home callsign prefixed by ZL1,2,3,4 as appropriate.

NOTE - HF Operation: Visiting amateur radio operators from countries not having formal reciprocal agreements with New Zealand, may also operate HF bands up to twelve months. A permit is necessary from the Ministry of Commerce, Radio Operations division. Application and requirement information is available from the Reciprocal Licensing Bureau.
A two-month lead time is normally required by the Ministry of Commerce to consider your application.

Intending visitors requiring information can do so from:

NZART Reciprocal Licensing Bureau
Russ Garlick ZL3AAA
23 Lydia Street
Greymouth
New Zealand 7801

Visitors are advised to obtain a copy of the NZART Callbook which contains amateur frequencies, band plans, repeater locations, and branch (club) information etc.
N.B. Since publication of the 1994 edition, The Radio Frequency Service (RFS) has been re-named. It's now Ministry Of Commerce - Radio Operations.

The Callbook's available from:

NZART General Secretary
PO Box 40-525
Upper Hutt
NEW ZEALAND

Phone +64 4 528-2170 (Mon-Fri, 2100-0400 UTC)
FAX +64 4 528-2170 (24 Hrs, 7 Days)

(I think it's about NZ$18...Cliff)

Brief note about VHF/UHF in N.Z. Our 2 metre band covers 144-148MHz with repeaters above 147.000 having a +600 kHz split, and 147.000 and below, a -600kHz split. Channel spacing is 25 kHz.
No access tone is required, but a pause of (say) three seconds between overs is customary to give other users access.

Our 70cm repeater band covers 430-440 MHz with repeaters having an offset of -5MHz, the exceptions are some national system access repeaters which have a +5MHz offset and have no tail. Channel spacing is 25 kHz.

The National System comprises a number of inter-linked 70cm repeaters and gives you access to many parts of N.Z. from most major cities and towns - with your handheld or mobile. Great when you're travelling!

That's it from me...If you want more....

Contests.
The BARTG HF RTTY Contest starts 0200 saturday March 18 until
0200 Monday March 20.
Single Operator and SWL stations permitted a maximum 30 hours operating time.
Rest periods in blocks not less than 3 hours.
Multi-Operator stations may work the full 48 hour contest period.

Categories:
1. Single Operator All Band.
2. Single operator Single Band.
3. Multi-Operator All Band.
4. Multi-Operator Multi-Transmitter.
5. Short wave Listener.

Categories 1, 2 and 3 are Single Transmitter only. No station may enter more
than one category.

Bands:
3.5, 7.0, 14, 21 and 28 MHz. amateur bands.

Message.
The exchange message will consist of:
(A) RST/message number. The number must be a three figure group and start with 001 for the first contact made.
(B) Time GMT. A full four figure GMT time must be sent as part of each message.

QSO Points:
Each completed QSO scores one (1) point. Stations may be contacted again on other bands for QSO credit. All duplicate contacts on the same band must be clearly marked in the log.

Multipliers:
All DXCC countries (including W, VE and VK) and all W, VE and VK call areas count as multipliers on each band.
Note:: Any country or W/K, VE/VO or VK area may be counted again if worked on a different band but continents are counted once only.

Scoring:
QSO points times multipliers times continents (max. 6).

Log Sheets:
Use separate log sheets for each band. Logs must show Band, Date, Time GMT, Callsign, Message Sent and Received, Countries and Points claimed. SWL logs must contain Date and Time GMT of logging, Callsign of station heard, Report sent by that station and Callsign of station being worked.

Summary Sheet:
To show full scoring, times of operation and address for correspondence. In the case of Multi-Operator stations, the names and callsigns of all operators involved with the station operation during the contest.
All logs must be received by May 31 1995 in order to qualify.
Sample log and summary sheets are available from the contest manager.
UK entrants send large (A4) S.A.E. outside UK please send 6 IRC's to cover postage. Computer generated logs containing all specified information are welcomed.

Please send your contest or check logs to:
Contest Manager. John Barber (G4SKA).
P.O. Box 8, Tiverton, Devon EX16 5YU, England.

Trophies will be awarded to category winners. Certificates will be awarded to the top three stations in each category, the top five category 1 entrants and in each continent and to the top category 1 entrant in each W/K, VE/VO and VK area.

Additional notes:
If a contestant manages to contact 25 or more different countries on two-way RTTY during the contest, a claim may be made for the "Quarter Century Award" (QCA) issued by BARTG and for which a charge of 6 US dollars or 30 IRC's is made.

Holders of existing QCA awards may add new countries to their existing records. A separate sheet showing bands, callsigns and countries claimed must be included with the contest log.
Your comments on the contest would be much appreciated.

Notes of Interest:
Guinea Bissau (J5). J55UAB is now QRV again using all bands and modes until January 1996. QSL via F6FNU.

South Shetland Isl. (VP8). VP8CQR and VP8CQS will be the callsigns used from King George Island and not HF0POL as first thought. They are expected to show up on RTTY towards the end of January and are at the base until the end of 1995. IOTA AN-010.
DL7VTS is also expected to be using RTTY from the adjoining Ardley Island with the call DP1KGI until the end of February 1995.

Falklands, (VP8). Jon Carp, VP8CQJ will be leaving for home around the middle of february. His next destination is likely to be Cyprus with the call (5B4ZL) some time in August.

Antarctic (VI0). Eddie continues to be active as VI0ANT from Davis base until the end of March 1995. This is CQ Zone 39. ITU Zone 69.

J20UFT was on Maskali Isl. in the Gulf of Aden. IOTA AF-053.

Thanks this month to..
G3ZYP, GU0SUP, DXNS, ARRL/ARLD.

BARTG caters for all DATA interests with information-components- kits-ready built units and professional software for the P.C. and other computers covering all common data modes.
Members receive a quarterly journal devoted to data modes.
Beginners guides for most data modes are available which are currently being updated.
The group sponsors HF RTTY - Amtor - Pactor contests, administers its own DX and members award schemes and holds an annual rally.

Please address membership enquiries to :-

As a ham for 40+ years, I concur with Warren, and strongly disagree with the original poster. Lowering _entrance_ standards has not, in my experience, hurt ham radio, but rather has breathed a new life into it. A lot of people who viewed learning Morse code as an entrance barrier have entered the activity and, through example have discovered code's not really so hard to learn. A lot of people who are content with the no-code Technician ticket are providing valuable communications expertice for public-service and emergency communications.

C'mon, guys! Let's stop the code/no-code bashing and remember that we're all hams. Everybody contributes something.

Some Icom radios (and I don't know if the 720 is one of them) required the key line to be pulled below 0.4 VDC, or the equivalent of a germanium switch in saturation. The Accu-Keyer (STILL one of my favorite goodies), uses a silicon switching transistor, so it never pulls below 0.7 VDC.

I long ago modified the keyer output to drive a small reed relay rather than key direct. The reed relay is quiet, and eliminates any problem keying anything, with no percepible change in keying characterisitcs.

Bernie Goetz was not a licensed radio amateur.

He used to show up at the Hosstraders at Deerfield NH and the Charlotte
VT Hamfest quite regularly. I asked him if he was licensed and he said
he was not a radio amateur. He is keenly interested in electronics and
I believe he works as a technician. His main interest was the flea
market and was not particularly happy with his notoriety. But he was
instantly recognizable in the crowd.

Kevin L. Anderson (kla@helios.augustana.edu) wrote:
: Excuse me for asking, but is there an easy way to
: find out who your local NTS person(s) may be?
: Any kind of "directory" maintained, say with the
: Traffic Manager for a section, to find out?

If nothing else assuming the Traffic Manager is issuing
Official Relay Station appointments(the Section Manager usually
lets the Traffic Manager do that), the Traffic Manager should know
who are the ORS and could give you that list.

: Do NTS people get bothered by any type of traffic,
: say something they might deem to be "trivia" and
: therefore a waste of their time?

Absolutely not. Traffic handlers enjoy passing traffic and
IMHO not traffic is trivial for we are all in practice for
disasters and passing those emergency, priority and health/welfare
messages.

Amateur Radio Newsline #912 06 Feb 1995

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Netowrk. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in it's entirety, not be subject to any further editing or commentary, and that full credit given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in it's entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or digital forms of Amateur Radio, it is recommended that the closed circut advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

The following is a QST

The ARRL invites repeater coordinators to a league sponsored meeting, Japanese hams rally to provide communications in the earthquake ravaged city of Kobe and another honor for a well known British ham. These stories and more on Newsline report number 912 coming your way right now!

(*****

ARRL BOARD OF DIRECTORS MEETING

Repeater coordinators. Put on your traveling shoes. The ARRL is inviting you to an open meeting later this year. A meeting that the Board of Directors says is to discuss ways of strengthening FCC support of local and regional coordinators, and related issues.
This is only one of many decisions made when the ARRL Board of Directors met in San Antonio, Texas, January 20th and 21st. Here are more of the highlights.
First, the Board adopted a Strategic Long Range Plan that has been in preparation since May of 1994 and has instructed President George Wilson, W4OYI, to begin its implementation. W4OYI appointed three new committees to coordinate the most critical aspects of plan implementation.
Also, a package of legislative goals was adopted, including positions on special call sign and licensing fees, spectrum allocations, liability protection for volunteers, RF susceptibility of consumer equipment, better rules enforcement, and commercial competition for spectrum.
And the cost of being an ARRL member is going up. This after an operational plan and budget for 1995 and 1996 was approved. The dues increase takes effect on April 1st. On the other side of the coin, a fund raising effort in support of the AMSAT Phase 3D satellite project was approved, including a $150,000 matching fund program.
On the regulatory scene, a draft petition for greater

flexibility in spread spectrum operation was revised to limit such operation to bands above 420 MHz, and the General Counsel was instructed to file the petition with FCC.
And the ARRL will file comments supporting participation by radio amateurs in state and local emergency communications operating plans under the new Emergency Alerting System that will replace the Emergency Broadcast System.
Also, the board ordered something many hams have been wanting for several years. Studies were ordered of ways to oppose restrictive covenants that limit amateur operation, and to increase FCC enforcement of its amateur rules. Sometimes called Conditions, Covenants and Restrictions, these are deed restrictions placed on many homes at the time that they are constructed. They also make it difficult for ham radio operators to find new homes.
In other matters, the final report of the Ad Hoc 219 MHz Committee was adopted, in preparation for an expected announcement of an amateur allocation in this band. Also, the Hiram Percy Maxim Birthday Celebration that was so popular in September 1994 was made an annual event.
Finally, Helen Grauer, N0BCI, the widow of ARRL Director Paul Grauer, W0FIR along with and Directors Ed Metzger W9PRN and Frank Butler were elected to three year terms as Directors of the ARRL Foundation.
The complete minutes of the January board meeting will appear in March issue of the League's QST magazine.

KV4FZ LICENSE RENEWAL DESIGNATED FOR HEARING

An amateur radio operator once considered a hero is now a step closer to losing his license. The FCC has ordered a license renewal hearing for Herbert L. Schoenbohm, KV4FZ.
In 1992, Schoenbohm was convicted in U.S. District Court of fraudulent use of a counterfeit long distance telephone access device. Now, the Commission says that conviction is relevant to evaluating whether Schoenbohm will comply with FCC rules governing amateur radio.
The Commission says it appears Schoenbohm lacks the requisite qualifications to have his Extra class amateur radio license renewed. Schoenbom, who lives in the U.S. Virgin Islands, says he will prevail in court.
In addition to house arrest and two years probation, Schoenbom was ordered to pay a $5000 fine. He says the FCC was asked to hold the license renewal hearing by people who want him off the air.
The next step is for an FCC Administrative Law Judge to set a hearing date. No word yet on exactly when that will happen.
Herbert Schoenbohm is no stranger to controversy. Fifteen years ago, he took on rich yacht owners who paid for radio callsigns and operated illegally while in the Caribbean.

Schoenbohm got the FCC to declare that people operating from U.S. flagged vessels must hold valid amateur licenses and are subject to FCC rules. That victory made him a hero to hams worldwide. More recently, he founded the controversial Better Amateur Radio Federation. Now, the man other hams once looked up to has to prove to the government that renewing his license will serve the public interest. More on this story in future Newsline reports.

(*****
RADIO FREE BERKLEY REPRIEVE

The unlicensed community radio statio Radio Free Berkeley received a temporary reprieve. This, after a federal judge rejected a Federal Communications Commission request for a preliminary injunction to shut down the station.
Free Radio Berkeley is a 20 watt FM station that broadcasts from 9 p.m. to midnight on Sundays. It's operated by Stephen Dunifer who says that he wants to expand the station's hours. But the FCC says that the small alternative station was illegally broadcasting without a license and should be shut down. It argues that there is no constitutional right to operate a radio station. But in an order issued on Friday January 20th, U.S. District Judge Claudia Wilken. Judge Wilken said she questioned the FCC's rules governing small stations like Dunnifers'. She stopped short of ordering the FCC to adopt new rules authorizing the operation of such stations. She did say that the FCC, not the courts, should decide how to regulate "micropower" stations like Radio Free Berkeley, and indicated that the government cannot simply run them off they air.
The FCC says that the ruling was the first time a judge has rejected the FCC's request to shut down an unlicensed radio station. The agency will be appealing the case to a higher court.

(*****
HAM RADIO IN THE KOBE QUAKE

Ham radio was used to aid communications following the January 16th earthquake in Kobe Japan, but only within the borders of that country. Japan declined to declare an international communications emergency. That meant only nations with third party traffic agreements could handle emergency related traffic. But inside the country it's a different story where more than 200 hams are still providing communication in the Kobe area. Amateur Radio is being used to connect relief centers and to exchange information on road conditions and traffic, the health, welfare, and whereabouts of residents, and the availability of water and food, according to the Japan Amateur Radio League. The JARL and the Japan Amateur Radio Equipment Industry Association are conducting the communications effort at the request of the Ministry of Posts and Telecommunications. 200

handheld transceivers for 430 and 1260 MHz, as well as three repeater stations, were supplied by JAIA. Each portable station has been assigned a special call sign, 8J3 series.
But there are still 400 relief centers handling a total of 240,000 evacuees that are still not being served by this communication system. The Japan Amateur Radio League says that it is considering equipping at least half of them with amateur stations, if they can get the hams and the go ahead from the government.
And this reminder to hams in the United States. No bilateral third party traffic agreement exists between Japan and the United States. Since Japan has declined to declare an international communications emergency, it is illegal to send or receive third party messages for stations in Japan. Don't do it unless you want to you want to chance getting a pink slip from the FCC.

(*****
IARU MEMBERSHIP SOUGHT

Still on the international scene. Amateur Radio societies in Turkmenistan and Burkina Faso have applied for membership in the International Amateur Radio Union.
The president of the Turkmenistan Radio Amateur League is Eugene M. Zwontsov, EZ8BO. He says his organization has 24 members with the total number of licensed amateurs in Turkmenistan is 32.
The Association des Radioamateurs du Burkina Faso says it has 29 members, including a number of officials of the Office National des Telecommunications. Its president is Youssouf Kaba, XT2KY.

(*****
WRTC-95

The administrators of the World Radiosport Team Championship 1995 report progress in organizing the event and solicit questions and comments.
WRTC-95 will be held July 8 and 9, 1995, in Washington, DC, in conjunction with the IARU HF World Championship. The Frankford Radio Club has joined the Potomac Valley Radio Club in coordinating applications for operators/participants.
Many other Washington area amateur radio clubs also will help with the arrangements and logistics for WRTC-95.

(*****
HELP WANTED

AMSAT North America says that it is seeking the services of a full-time person to oversee the final assembly and testing of the Phase 3D spacecraft at its Orlando, Florida Integration Facility. The person must have at least 5 years of hands-on experience in the aerospace industry including cable harness design and installation. Both domestic and international travel will be

required.
Also, AMSAT's Phase 3-D project is in need of a volunteer who can read and translate technical Russian. If you can help in either of these projects please contact Dick Jansson, WD4FAB at Amsat NA.

(*****
SOLAR ASSISTANCE

NASA has completed the second of two shipments of solar panel modules, marking delivery of the first U.S. Space Station flight hardware for NASA's cooperative space endeavors with Russia. The hardware shipments each consisted of 45 solar panel modules that were developed for the cooperative solar array project, an effort that brings together NASA's advanced photovoltaic technology with Russia's proven structures and mechanisms.

(*****
DX - LEBANON

In DX, OH1NO says that he will be active from Lebanon as OH1NOA/OD5 until August of 1995. Look for him on 80 through 10 meters including the WARC bands mainly on CW and QSL via OH1MRR.

(*****
DX-KENYA

Also, Kenya is on the air. 5Z4FO has been active on 80 meters CW and SSB below 3800 kHz starting as early as 22:15 UTC and as late as 04:15 UTC. He has also been active on 160 meter mostly CW on 1832 kHz around 01:00 UTC. QSL via KB4EKY.

(*****
ANOTHER BROADBENT HONOR

And finally, a second very high honor has come to Ron Broadbent, G3AAJ, in as many months. A recent GB2RS News Bulletin reports that Ron has been elected a Vice President of the Radio Society of Great Britain. The election was by the RSGB Council with the announcement was made at RSGB's presidential installation dinner on January 14th.
In late December, Ron was awarded an MBE or Member of the British Empire honor in the New Year's Honours List "for services to amateur radio," which decoration he is to receive personally from Queen Elizabeth at Buckingham Palace later this month.

(*****
And for this week, that's all from the Amateur Radio Newsline. You can write to us at Post Office Box 660937, Arcadia, California 91066.

>i could pay for some decent equipment, Also I Live in owensboro Ky, and
>I'd also like to know how, and what i have to do to get my license

Hello Lane. You won't regret getting into amateur radio. I've spent most of my life involved with it, and it's been great fun, and a real satisfaction. Give Larry Yates, WA4PMA, a call in Owensboro, he'll put you in touch with the local club, and help you get going. Tell him hello for me. He and I got our licenses when we were 14 and had a ball. We were both from Henderson at the time. You can find used equipment for $100-$300 that will serve you very well. Or you can build your own. It's not hard to get started on a small budget. Don't be afraid to pester the old guys, most of them will be flattered and glad to give you a hand.

saw a TV ad for a Chevy vehicle that featured a built in panel for connecting external accessories to vehicle power. example had a guy fishing or camping someplace while his cell radiophone was sending/receiving calls and faxes.

anybody know if they did this "right" for RF uses and did they supply a connector capable of 25-30A in this panel? be way cool it this would spread beyond the "utility/sport" vehicle this apparently was...

Folks:
I recently tried to get rid of fuel pump noise in my car. According to information in QST, I installed a 1uF capacitor in the line and the noise went away; kindoff. From a S6 down to S3. But it is still there; As I am driving and I turn the engine off, the noise disappears (yes, I am very careful about this test). Does anyone have any more ideas how to fix this problem? Is it possible to get rid of noise totally from a moving vehicle?

Thanks for your help.

In fact it goes the other way. It'd be nice if we got fewer sad awful messages to deliver. Without fail, two or three times a year I'm handed NTS containing a report of someone's death.

Woe be upon those too cheap and inconsiderate that they can't make a phone call to pass along such grave news.

1628. Requesting comments on Ameritron AL-82 amplifier

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 15:20:17 UTC
From: wstrahl@nwscc.nw.att.com
Message-ID: <D3L3xu.AE4@nntpa.cb.att.com>
Source record: 252430

I have come to the conclusion that an 'instant-on' amplifier might be beneficial compared to the 'three minute warm-up' type that I use now. (That 3 minutes seems like an eternity when a pileup is growing quickly due to Packetcluster!!). Does anyone have any first-hand experience or in depth knowledge of the Ameritron AL-82 amplifier (pair of 3-500Z's). This seems to be the only amp I'm aware of that runs the tubes at over 3500 Volts on the plate which should help achieve the maximum output possible from those tubes. Is the power supply beefy enough for durability under contest operating? How's the output on 10M? How's the blower noise (variable hi/lo speed?) Is the available QSK functional? How's the output on 17 and 12M? I'm leaning toward an amp with a pair of 3-500Z's as probably being the 'best bang for the buck'. All related comments/opinions appreciated.

LAUNCH SITE COORDINATES: 39.5166 deg North, 104.5920 deg West
LAUNCH TIME : 15:45 UTC

Landing Site Coordinates: 38.77233 deg North, 103.84533 deg West
LOS at Ground station: 17:31 UTC

FLIGHT EXPERIMENT: Flight Qualification of Shuttle II
PROJECT INTEGRATOR: Jack Crabtree AA0P, Mike Manes W5VSI

Shuttle II FREQUENCIES:

Telemetry: 144.340 MHz
Beacon: 147.555
ATV: 426.250

Foxhunters:

Pikes Peak FM Association Repeaters 448.450 MHz
Colorado Repeater Association Repeaters 447.150 MHz

FLIGHT LOG:

After suffering through an ordeal by atmosphere last flight, we used this flight to requalify the Shuttle II for use in experimental flight.

Our first problem of the day arose immediately. There were no winds aloft for Denver in the RAOB file on Weatherbank. However, there was a report from Grand Junction. I usually use these winds as a corroborative data set and this time around we had to rely on them exclusively. Another problem with those winds, no data above 54,000 feet. Using data from the previous evening for the 60,000 feet and above winds we estimated the balloon would fly 65 to 70 statute miles on a course of 130 degrees (approximately). In fact, the balloon flew 65 miles on a course of 142 degrees. Hey everyone's entitled to a little luck.

The ground station was having problems commanding the payload prior to lift off. This necessitated a swap of radios at the command position and an abandonment of APRS monitoring at the ground station. The flight was late getting off the ground for this reason.

After the swap, filling the balloon and setting up the payload train proceeded without incident. However, the winds were picking up steadily throughout the setup.

At 15:45 UTC the balloon was released.

Initially all systems were working fine.

As the balloon rose into the sky, the ATV camera fogged up causing less (much less) than perfect video. This is a recurring problem since we switched to the color camera. A few experiments were done to determine the location of the fogging. It is hoped that we can correct this for the next flight.

Occasionally we were unable to command the payload from the ground station. However, a mobile rig in a nearby car served as backup and seemed to have no problems in this regard. We're a little mystified about this as the ground station should have a much better signal into the payload thru our beams. A link analysis is planned to determine the purity of DTMF tones, and the bandwidth of the receiver. More about that later probably.

We lost our ATV antenna on descent. This time the antenna did not detach, just some serious coax degradation that killed any output.

GPS worked GREAT most of the time. We got all of our telemetry from ground to burst. However, we did have some problems on the descent phase. It's thought that some test commands that were sent to the payload intended for other experiments may have had an unintended side effect on the GPS state (navigation, acquisition, loading ephemeris>. This will be looked into also.

Jim White's location was also fantastic. His QTH is almost the highest house in the area, and it certainly offered EOSS an ideal location for a launch. There was quite a crowd there too. Thanks to you Jim and to Diane (his wife) also for putting up with a lot of crazy folks at ungodly early hours!

[more useless drivel from Brian deleted]

Go fuck yourself. Call the sysadmin at grendel.com and get the same answer.
This is usenet, not "Nick at Night".

Jeff Herman is a raving Homophobic (among other things) and requires an
adjustment periodically. Since I have argued with him in the past, some
how or another, you seem to think I'm some sort of raving pervert and/or
homosexual.

You don't like my postings? Put me in your kill file instead of trying to
tell me and others what to do. Take some personal responsibility for your
own life.

In case you missed it, "Go fuck yourself".

I didn't realize that people with only CB permission were allowed to
get Amateur Radio licenses. I thought amateur radio licenses were only
awarded to individuals who have passed a recognized examination given
by approved volunteer examiners. I guess I have to tell my friends
and colleagues who have CB sets that they are now able to get amateur
licenses.

I have several Motorola HT220s (and a GE and a Maxon) that I
need to get crystals for. Can anyone suggest a place that sells
crystals for a reasonable price? I also need a line on low cost
batteries for the same radios.

Thanks in advance.

>something I can do about the problem?
>Please don't suggest cable TV. I know that will fix it, but I'd like to
>postpone that expense for a few more years. If there were a cheaper solution I
>would welcome it.

It seems to me that something must be wrong with your gear, either the
HT or TV system, and most likely feedline problems. I have an AR270
dual band mounted right on the same mast as my TV antenna, just above
it, and never get any TVI on any channel, operating 2 m or 70 cm.
I have transmitted only with 5 Watts though. I may be wrong about your
problem, but at least my hunch is a suggestion of things to try.
BTW, my TV feedline is 75 Ohm coax, not twinlead. I think coax is
better able to resist noise from other sources. Also, I have both
coaxes coiled a few turns just below the feedpoints, but don't really
know if that helps any. Anyway, GL in your troubleshooting -- Phil.

Source record: 252443

Bruce McGregor (brucemcg@actrix.gen.nz) wrote:
: What is the correct method of storing Ni-Cad batteries over say a
: 6 month period. Fully charged or fully discharged??

The answer is it doesn't much matter. Unlike lead-acid batteries, there is no harm in storing nicads uncharged. The battery manufacturer's catalogs I have read actually recommend storing them uncharged, but I don't think it's a big deal.

What IS a big deal is this: After a long period of storage, be sure to charge the battery before use. It is easy for one of the cells to lose more charge than the others over a long period of time. If you use the battery pack without recharging, you risk reverse-charging the low cell, which can destroy it in short order.

1641. HELP CHAN. ELEM. ALIGN MOTOROLA MITREK

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-06 20:41:37 UTC
From: sidener@crunch.nuc.umr.edu
Message-ID: <3h61i1$3a9@hptemp1.cc.umr.edu>
Source record: 252444

I am currently trying to tune a Motorola Mitrek radio to the ham band:

The radio is rated for (146-174Mhz)

It was tuned to 168Mhz.

I have successfully tuned the radio and channel element on the
transmit side to 145.290Mhz.

I am having a big problem getting the channel element (not radio)
on the recieve side to resonate at 144.690Mhz.

Motorola does not produce schemaitic of their channel elements
and I have been told that some components eg. caps. must be replaced
in the element to get it to resonate.

Motorola only has one model of channel element for that radio.
(KXN1088A) TX and (KXN1086B) RX

I was wandering if someone has a schematic or conversion chart pretaining
to the channel element alignment.

Obviously, something besides the crystal must be changed to have a range
of 146-174Mhz.

Any help would be greatly appreciated!!!

Thanks,

Scott Sidener N0WFL sidener@umr.edu

One other interesting thing. It was thought electrons flowed from
positive to negative until well after TV was invented. Its called
"conventional electron flow".

It was then discovered that electrons flow from negative to positive
and its called "actual electron flow".

Amazing that something as complex as TV was invented and the whole
while they didn't even know which way electricity was flowing!

I'll go along with that. I learned on firebottles, so it was always
neg. to pos. (kind of welling up from the ground, and out through the
tops of the tubes). Then in college it was time to learn semi's (I
tried when I was younger, but I could never figure out what voltage to
put on the base....) so with great effort I switched, because as
mentioned above it's so much easier to follow the arrows. Actually, if
I'm looking at a PNP-only circuit, I still think of the current flowing
down into the collectors.

Can this really be true? I thought they had this figured out before WWI at least. I know DeForest didn't have a clue, but surely they couldn't have made all those tube developments in the '20s and '30s by thinking that the electrons were flowing off of the plate. The terms I remember used were "conventional current flow" and "electron current flow". Of course, I guess it depends on what date you take for the invention of TV.

From: jcook@netcom.com
Message-ID: <jcookD3LqzA.4HJ@netcom.com>
Source record: 252456

Wanted:

List of sources for weather fax in the region of Florida/Cuba/Carribean.

My brother is a ham and professional sailing instructor in that region,
and is just starting out with onboard ham. Needs the weather info by fax
or weather map fax (whatever) onboard ship.

Thank you.

>here's a simple question with wich i keep getting conflicting answers to:
>does electricity flow from positive to negative, or vice versa

Electrons flow from the negative terminal to the positive terminal.
Current flow is defined as the direction opposite the direction
that electrons flow, so current flos is from positive to negative.

I am currently a Technician Class operator- passed the exam about 4 years ago and have operated very little since that time...

Well, I miss amateur radio. Also, I now have a sailboat and do a bit of offshore sailing. Seems to me that having a rig on board would be loads of fun and a safety asset to boot.

I would like to upgrade. Have heard that there are computer programs available to "teach" code. Any recommendations? Are any available by ftp? Commercial sources?

Please excuse me if this info is in a FAQ or some such. I'm sort of new at this internet business....

1659. SWR affected by plastic antenna tip!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-07 01:20:54 UTC
From: gereiswi@nmsu.edu
Message-ID: <3h6htm$knt@dns1.NMSU.Edu>
Source record: 252461

This is a strange one, but one I hope you experts might solve.
I bought a Firestick CB antenna for my car (5/8 wave, top loaded
3' fiberglass). As I was setting up the SWR meter, I noted that it read
about 3:1...not good. After goofing around to try to figure out what I
had done wrong, I took a little vinyl sleeve off the tip of the antenna,
whcih is only about 1" long. Suddenly the SWR reads 1.3:1.
Continuing with the experiment, I wrapped some thin cardboard
around the tip. Again, the reading plummeted to better than 3:1.
What gives? I guess I'll leave the tip off, but why would a
material that is purportedly transparent to EMF affect the SWR?
Thanks in advance!

> deleted. Thanks in advance.
> jhschutt@tayloru.edu

Send a message to info@arrl.org
Leave the subject line blank
in the body put a single line of help for the first line
for the second line in the body put index
finish with a third line of quit

This will get you all of the info you want and an index of the files they have.
If you know the file name you can put a two lines in the body as follows:

send <filename>
quit

Hope that helps.

Bill

[snip]

Correct me if I am wrong but if you do the transmit mods on the DJ-180
and transmit out of band...it'll be the last thing your DJ-180 does....
as the microprocessor don't like modification.

There may be more radios in that boat but the DJ-180 is one radio that
is strictly for two meters and two meters only.

So I'm told by those I work with and for.

1663. Classes, VE stuff, and Part 97 on the Web

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-07 03:04:53 UTC
From: scotte@ccs.neu.edu
Message-ID: <3h6o0l$t8p@narnia.ccs.neu.edu>
Source record: 252466

I've incorporated the Eastern Mass. ham radio class list, national ARRL
VE listing, and a true hypertext version of Part 97 into the ARRL Web page.

The URLs are as follows:

For the classes: http://www.acs.oakland.edu/barc/arrl/classes-ema.html

For the VE sessions: http://www.acs.oakland.edu/barc/arrl/ve.html

For Part 97: http://www.acs.oakland.edu/barc/arrl/part97.html

What I ask of you -

Since the ARRL's Web page is for EVERYBODY, not just Massachusetts/New
England, I want class listings for across the country!

Let's help make the ARRL's Web page work for everybody.

Various clubs have created locally-oriented Web pages. The ARRL is a
national organization, so let's take advantage of that!

Help me develop the ARRL Web page into something we can all benefit from!

Your help is wanted, needed, and encouraged! (So that's a little redundant).

I have perhaps foolishly volunteered to be the chair of the local (Boulder, CO) swapfest, which will be held in late September. I was wondering what neat or unusual ideas the hams reading this group have seen or done for swapfests, or ideas that you would like to see. Our swapfest does not aspire to be Dayton, but I would welcome any ideas that people would like to see, and I am sure that there are other swapfest organizers that are in the same boat.

immediately obvious...
>
>I was thinking the exact same thing!!!
>IMHO, I think the first gate should be for people to reclaim
>"THEIR OWN" previous call. And start issuing Club & Military calls.

before a club station can get a vanity call, they first have to get
a call from the standard list -- i ordered the copies of 610B today
so i could have 'em ready to file ASAP so we can get a call so we
can evaluate if we want a vanity call.

i'll have to reread the R&O..i don't recall seeing much in there on
"military recreation stations..."
>
>The proposed first gate is a joke and is gonna kill the whole system!

is that just because you (and the others) didn't comment and so left the
FCC with the impression that people want old calls of relatives back
in a big way?

Paul,

Good luck with your Mirage amp. I recently blew up a Mirage D1010 ATVN amp.

It was still under warranty. I sent it back for warranty repair, and they refused to fix it. I asked to speak to the owner. He called me on the phone, and started yelling at me. He ended up telling me that I obviously didn't know what I was talking about and hung the phone up on me.

The amp that I had was the ATV model. I was running it on FM at 80 watts output when the T/R relay went up in a ball of fire and smoke.

Mirage claimed that you can not run their ATV amps at full power or near full power in the FM mode. They say that if you do, that they will go into oscillation and self destruct like my amp had done.

I looked at the instruction manual that came with it, and could not find any warning like that. I looked at their sales brochure and could not find any warnings about FM either.

Their brochure and their instruction manual said:

Mode: ATV, FM, CW, SSB

Input Power: 3 to 15 watts

Output Power: 100 watts

I will never buy another Mirage product.

I was going to send a letter along with a copy of the letter from their repair tech to their advertisers. However, I could not find any magazine that they advertise in.

Let this be warning to anyone considering a Mirage amplifier, if it breaks, don't
expect Mirage to repair it for you.

Good Luck

Rick

>I am teaching a clas for prospective hams. One of the students asked exactly where do the different frequency designations start and stop?. LF, HF, VHF, UHF and VHF?
>
>Thanks,
>
>Rich WB6EEE

Hi Rich, The limits are powers of 10 meters:

Wavelength Frequency
LF 10 - 1 km 30 - 300 kHz
MF 1000 - 100 m .3 - 3 MHz
HF 100 - 10 m 3 - 30 MHz
VHF 10 - 1 m 30 - 300 MHz
UHF 1 -.1 m 300 - 3000 MHz

Back in the Good Old Days wavelength was the standard unit of measurement with regard to the radio spectrum.

Many of the Chico repeaters can be worked in Sacramento while mobile.
Many of the Sacramento repeaters can be worked in Chico as well. You
really have many choices. Just pick the right one from either end.

You shouldn't have any problem finding any local club activity on 2
meters or 440 , just tune for activity.

Sean,

In the report and order issued by the FCC on the new vanity call signs, it says:

The applicant must request that the call sign shown on the current license be vacated and provide a list of up to 25 call signs in order of preference.

The first assignable call sign from the applicant's list will be shown on the license grant. When none of those call signs are assignable, the call sign vacated by the applicant will be shown on the license grant.

Hope that helps.

Good luck with your new call sign.

As a satellite enthusiast, I am amazed and trully impressed about the Nasa Video images, which is currently on TDRSS 41 degrees W, 4000MHz C band. I was mesmerized watching the rendevous with the MIR space station. What a treat!
Thanks to Columbia Satellite Corp. for rebroadcasting NASA select on TDRSS (pron: Tee-dresss) in the space available transponder (preemptied by APTV). Pity that European stations cant rebroadcast it for the benefit of most viewers (who dont necessarily have C band); I mean the whole day when the channels arent even on, they just show the test cards! It would be better if they showed NASA video; after all it's free!

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Well, David, I expect your Land Rover is made considerably differently
: from a typical Detroit vehicle. A "welded steel monococque" indeed. :-)
: I'm afraid Detroit vehicles don't meet that criteria in any way
: meaningful to the mounting of radios. Let me give as example my
: 1987 Jeep Commanche.

My L-R "Discovery" isn't typical of most cars round here. It has a
reinforced steel inner shell with removable aluminium outer panels. The
whole thing sits on rubber mounts on a separate chassis. The steel shell
gives an excellent ground path (for want of a better name)
Most European normal (IE non 4x4) cars are a single steel shell
assembled on a monstrous robotic alignment and spot-weld jig. Front
panels, bumpers and wings (fenders to you?) are often bolt-on jobs, but
the rest of the shell is an excellent conductor. low R and low L.
This is normally termed "monococque" construction (as opposed to
separate chassis construction)

: The exposed dash is completely plastic, so the radio mounting bracket
: won't be connected to metal at all. The nearest body metal is the
: firewall, or the floor pan, depending on the exact mounting position
: chosen. These are parts of the main cab which is mounted to the frame
: via rubber bushings. The firewall has a single #16 wire bonding it
: to the frame. All parts are painted before assembly.

Er, yes, I can see why it should give you problems. The antique
series 1,2,3 Land Rovers were similarly a set of painted parts bolted
together, sitting on the chassis, as were a lot of large trucks.
Electrical work was always fun. I thought that the Jeep cherokee and
grand cherokee were "unit construction" and relied on shell strength as
they had no separate chassis.

: When I bought the truck, I noticed that the instrument lights would
: dim in time with the turn indicator. Investigation showed that the
: instrument cluster was "grounded" to the firewall by a single #16
: wire. The firewall connection used a star washer to bite through
: the paint on the firewall, but not very well. After some sanding,
: I got a better bond, but the instrument lights still dimmed a bit

And I thought "Joseph Lucas, prince of darkness" was a popular joke
amongst brit car owners in the USA ;-)

: [Note: the truck started and ran fine. Investigation showed
: that the battery negative lead attached via the same *unpainted*
: bolt to the frame as the engine block ground strap. The bolt carried

: the current, not the frame.]

Well, they got something electrical right!

: Meanwhile through all of this, the 2 way radios worked fine
: because they used the "2 wires makes a light" philosophy and
: were wired directly to the battery via two fused heavy leads.
: I don't recomend using "chassis" as a path for any electrical
: current demand in a vehicle unless you own a body sander and
: stock in a star washer company.
: Gary

Or all the vehicle metalwork is held together with thousands of spot-welds. In your case, virtually nothing else would have worked.

On a typical Euro-Nippon tin box, you can get an excellent body ground, provided you are cautious about removable wings (fenders?) in the cab, everything seems plastic but hard ground points can be found under the dash by tracing back the steering column mounting brackets. With my to-the-rear-of-the-centre-console location, the seatbelt mount bolts were handy.

Glassfibre cars like Lotus and TVR have to be the worst to put a good radio installation into. I recall having to remove cab headlinings (means removing all windows in some cases) to glue in an aluminium foil groundplane on the underside of the roof. It either doesn't stick, or the glue drips into your hair.

Some brit cars and light vans have their batteries in the boot, under rear seats etc and simply use the bodyshell for the negative connection. The engine unit just has a meaty braid strap to a nearby bit of the bodyshell.

On a non-automotive subject:

A company made PC boards. They had a big 4-headed numerically controlled drilling machine that drilled 4 stacks of 3 boards simultaneously, and automatically changed drill sizes, as commanded by a paper tape operated control box. Occasionally it used its servos to send the X-Y table to an extreme position, while the drills were in the boards. Bye-bye 4 solid carbide drills, bye-bye a dozen boards, back to square one. Of course, it was heavily investigated by various people Eventually they got mad and bought a new one (Of a different make, of course). They advertised the old one and a dealer in second hand machines came to collect it. "Where's the big ground strap?" "What?" "It's a dirty great thick lump of copper braid that connects the control console to the machine. If it's not connected tightly, they sometimes make their servos go berserk..... Oh" (I heard this second-hand from the man who said "What?")

Cheers
David

Yes!

Electrons flow from a greater concentration (negative) to a point of lesser concentration (positive).

"Positive charges" flow from a point of greater concentration (positive) to a point of lesser concentration (negative).

Now all we have to do is agree "What is electricity?".

The electron tube proves the "electron theory"; magentic laws and the right-hand rule proves the "conventional" theory; now what?

>
>here's a simple question with wich i keep getting conflicting answers to:
>does electricity flow from positive to negative, or vice versa

That depends on the majority carrier in the material. For most materials, wires, resistors, vacuum tubes, etc, the majority carrier is the electron, and electrons flow from negative to positive. For some semiconductor materials, and some gas filled tubes, the majority conductor is the hole, and holes flow from positive to negative. (It can be argued that the hole is the displacement of an electron, and thus even in that case current really flows from negative to positive.)

Back in the days before the electron was discovered, people decided, arbitrarily, that current flowed from positive to negative. They didn't know what was actually going on, but could write equations about the results of current flow and needed a way of indicating current flow direction. Well, they picked wrong, and it's stuck in physics and engineering texts to this day.

In article <D3K49v.7zI@actrix.gen.nz> brucemcg@actrix.gen.nz (Bruce McGregor) writes:
>What is the correct method of storing Ni-Cad batteries over say a
>6 month period. Fully charged or fully discharged??

The self-discharge rate is such that after 6 months of storage the
cells will be fully discharged anyway. The battery manufacturers
recomend storing NiCads discharged, and that's the way they'll be
shipped to you.

NiCads are extremely intolerant of being reverse charged. That can
easily happen with cells in *packs*. The weakest cell will fully
discharge first, and current flowing from the other cells in the
pack will reverse charge the weak cell, usually damaging or destroying
it. That's why you never attempt to fully discharge a NiCad *pack*.
The final voltage of a pack should never be allowed to drop below
the number of cells in the pack, IE if it has 6 cells, discharging
should stop when the pack voltage drops to 6 volts.

Individual cells, however, can safely be fully discharged to zero volts,
and will self-discharge to that point anyway if stored for a number of
months, so that's the best condition in which to store them.

Some professional NiCad packs are assembled so that the cells can
be discharged *separately* for conditioning or storage. Amateur
packs typically cannot have their cells individually discharged.
That's why the "run it all the way down" method of removing NiCad
"memory" from packs is so dangerous. NiCad memory is a very rare
condition that can only happen under very specific conditions. The
cell must be repetitively discharged to *exactly* the same point
several hundred times for it to get a "memory". This rarely happens
in practice.

What we typically see in practice is *voltage depression*. This is a
different condition which *appears* like "memory", but has a different
cause (extended overcharging at a low rate). It can also be cured by
fully discharging and charging a cell. Again, you can't do that *in the
pack* unless it's one of the special professional packs with provisions
for discharging individual cells *separately*.

The best course is to take care of your NiCads so that they don't
develop "memory" or voltage depression. The best way to do that
is to recharge them at random terminal voltages so that memory
will not occur, and to use a pulse charger that senses the voltage
droop at full charge and stops charging. The slow charger can damage
a partially charged cell, and should be avoided. The fast charger
that works on time can cook a partially charged NiCad, and should

also be avoided. You want to be able to bring the charge back up
to full from any random partial charge state and then *stop*.
That'll give a longer battery life than fully discharging each
of the cells of the pack and then fully recharging them each
cycle. Typical NiCad cells are good for 500 full charge cycles,
or several thousand properly controlled partial cycles. So
partial cycling is best for long cell life.

I think that you can find several code practice programs at one of
two sites. I don't remember which one is which but both have ham radio
files.

Try an anonymous ftp to "SunSITE.unc.edu" and look in the
/pub/academic/agriculture/agronomy/ham directory. This is a real file path as strange as
it looks.

Also ftp to "oak.oakland.edu" and look in the /pub3/hamradio directory.
There are a large number of things there also.

>around the tip. Again, the reading plummeted to better than 3:1.
> What gives? I guess I'll leave the tip off, but why would a
>material that is purportedly transparent to EMF affect the SWR?

The velocity factor of an RF carrying wire is a function of the
dielectric constant of the material surrounding the wire. Vacuum,
and air, are roughly 1, IE no effect, but other materials have a
greater dielectric constant. A material with a dielectric constant
of 2.45 slipped over the wire would have the effect of electrically
lengthening the wire. So what's happening is you are tuning the
antenna to a lower frequency with the vinyl sleeve. This will,
of course, increase the VSWR at the original frequency.

You need to give the noise a little more encouragement to take the
capacitor impedance as its preferred path to ground. Put a series
choke in the power lead before the capacitor and pump. This will
raise the RF impedance seen looking out from the pump toward the
power source, thus making the capacitor look even better to the
noise. IE

```
power----))))))--x---pump
|
=
|
GND
```

Secondarily, the residual noise may be cross coupling to the radio
via the common chassis ground impedance, IE classic ground loop.
You might want to improve the ground path with strategic copper
jumpers, even the infamous negative lead run straight to the
battery.

This kind of reminds me of that old "dark sucker" file I saved once.......

A Humorous Interlude stolen from a local BBS, original source unknown:

A Light In The Dark

Bell Labs Prove Existence of Dark Suckers
(Reprinted from the Bell Labs Newsletter)

For years it has been believed that electric bulbs emit light.
However, recent information from Bell Labs has proven otherwise.
Electric bulbs do not emit light, they suck dark. Thus they are now
called dark suckers. The Dark Sucker Theory, according to a Bell Labs
spokesperon, proves the existence of dark, that dark has a mass
heavier than that of light, and that dark travels faster than light.

The basis of the Dark Sucker Theory is that electric bulbs suck
dark. Take for example the dark suckers in the room where you are.
There is less dark in the immediate area of the dark suckers than
there is elsewhere in the room. The larger the dark sucker, the
greater its capacity to suck dark. Dark suckers in a parking lot have
a much greater capacity than the ones in this room. As with all
things, dark suckers don't last forever. Once they are full of dark
they can no longer suck. This is proven by the black spot on a full
dark sucker. A candle is a primitive dark sucker. A new candle has a
white wick. You will notice that, after the first use, the wic turns
black -- representing all the dark which has been sucked into it. If
you hold a pencil next to the wick of an operating candle, the tip
will turn black because it got in the way of the dark flowing into the
candle.

Unfortunately, these primitive dark suckers have a very limited
range. There are, fortunately, portable dark suckers. The bulbs in

these cannot handle all of the dark by themselves, and require the use of additional dark storage units. When the dark storage unit, referred to by some as a battery, is full it must either be emptied or replaced before the portable dark sucker can operate again. In fact, if a full battery is cracked open, its contents will appear very dark.

Dark has mass. When dark goes into a dark sucker, friction from this mass generates heat. Thus it is not wise to touch an operating dark sucker. Candles present a special hazard because the dark must travel in the solid wick instead of through glass. This generates a large quantity of heat, which makes it inadvisable to touch an operating candle.

Dark is also heavier than light. If you swim deeper and deeper you notice that it slowly gets darker and darker. When you reach a depth of aproximately 80 meters, you are in total darkness. This is because the heavier dark sinks to the bottom of the water and the lighter light floats to the top. The immense power of dark can be utilized to humankind's advantage. Dark which has settled to the bottoms of lakes can be pushed through turbines to generate electricity. In this way dark can be forced into the oceans where it can be safely stored.

Prior to the invention of the turbine it was much more difficult to get dark from rivers and lakes to the oceans. The Indians recognized this problem and tried to solve it. When on a river in a canoe traveling in the same direction as the flow of dark, Indians paddled slowly, so as not to stop the flow of dark. When they traveled against the flow of dark they paddled quickly to help push the dark along its way.

Finally, it becomes clear that dark is faster than light. If you stand in an illuminated room in fromt of a closed, dark closet you notice that, as you slowly open the closet door, light slowly enters the closet. However the dark moves so quickly that you are not able to see the dark leave the closet.

In conclusion, scientists from the Bell Labs have noted that dark suckers make our lives easier and more enjoyable. So the next time you look at an electric bulb remember that its function is actually that of a dark sucker.

I suggest removing the fuse from the tv set. I did that here and it
cleared the TVI difficulties right up!
Serriously try moving the transmitter antenna away from the tv areal. I
have found in my own home that some TV sets are much more prone to TVI
from 2 meters than others. All of the usual provissios will apply.
Ground the set ground your rig make sure there is no rf in the shack
filters on the radio and on the set.

Hi everybody,

I have a question, I don't know whether this is the right place
to post it but I'll give it a try anyway :)

I have a friend who wants to buy a mobile phone and would like to
use it in Europe. Namely Austria, Germany, Switzerland.

He heard that there are at least 3 different standards out there?
So he would like to know which model (standard) to buy and what
would be the approximate price?

Thanks in advance for any hints. Boris.

Get a phone on the GSM system which is Europe-wide. Buy at any cellular phone dealer in the country where one wishes to be billed. Ask about present coverage to ensure it is already adequate in required locations.

Price about $500 with connection contract for a fancy lightweight model.

Heavier models cost less. Sets without connection contracts cost more.

The final RF amp (module) in my AZDEN PCS-3000 has bit the dust. AZDEN no longer stocks the part (p/n 78-000040-01 and carries the reference Q301). It would seem that someone else had the same problem before since the module thats in there is a Toshiba S-AV7.

Does anyone have either of these parts available or know of a source ?

Thanks,

Mark VE2HVW

I shamelessly stole the following from someone else's sig.
(yup, over 4 lines!)

I don't know if you have to be British .... ?

The only things known to go faster than ordinary light is monarchy,
according to the philosopher Ly Tin Weedle. He reasoned like this: you
can't have more than one king, and tradition demands that there is no gap
between kings, so when a king dies the succession must therefore pass to
the heir *instantaneously*. Presumably, he said, there must be some
elementary particles -- kingons, or possibly queons -- that do this job,
but of course succession sometimes fails if, in mid-flight, they strike an
anti-particle, or republicon. His ambitious plans to use his discovery to
send messages, involving the careful torturing of a small king in order to
modulate the signal, were never fully expanded because, at that point, the
bar closed.

Motorola has over 100,000 employees worldwide, and a very small percentage of
that has anything to do with radios! I do finacial work for a group that does
mechanical engineering of DoD equipment.

Assuming I have a technical knowledge about amateur radios because I work for
Motorola would be like assuming that everyone that works for General Motors
would know the specifics of a GP40 locomotive (since GM makes locomotives).

Source record: 252402

More than likely, you're just overloading the front end of
the TV set. If the feedline is coax, insert a T in the coax
before the set (or before the booster amp, if you use one) and
install an open-ended coax stub made from the same coax you use
for the feedline. Make it about 18" long and gradually trim it
off with a set of diagonal cutters, 1/4" at a time, until the
interference disappears or is minimized.

If you're using twin-lead for the TV feedline, there are similar
twin-lead stubs that can be made and inserted in parallel with the
twin-lead screws at the back of the TV set (or input to the booster
amp, if used). Check the ARRL Handbook for exact dimensions; it's best
to make it a little long and trim it to maximize the attenuation.

In either case, what you are creating is a quarter-wave stub tuned
to the 2-meter band; since the far end is open, at the resonant
frequency it reflects a short circuit across the transmission line.
I don't notice any significant degradation in TV reception, although
I'm sure the upper VHF channels (7-13) may be slightly attenuated since
they start at 174 MHz and the stub is tuned to about 146 MHz.

My TV antenna feeds a 20-dB gain booster amp in the basement through
coax, and I put the stub right at the input to the amplifier.
I run 140 watts CW & SSB, and only see faint lines on the screen when
my antenna is pointing directly at the TV antenna, which is 20' away.
Otherwise, the XYL can't tell I'm on the air. :-)

No guarantee this will work. I copied it down a while ago. See the
body of the material for its origin.

~jack_

LATEST VERSIONS: Novice v3.3, Technician v3.5, General v2.3,
Advanced v2.3, Extra v2.3

This is another announcement about the MacIntosh HamStacks which I have
created. If you are not interested, press 'n' now.

I have created five HyperCard stacks to help people practice for the
written Amateur Radio tests. There is one stack for each of Novice,
Technician, General, Advanced and Extra questions. Each stack is an
interactive multiple-choice test, created from the entire question pool
for that class of license. The test is randomly generated, using the
algorithms provided for each of the tests from ARRL, so this is a real-
live simulation of the tests you will get in front of a VE. There are
some print capabilities (you can print a test with a separate answer
key, but it's slow. you can also print your results of how well you
did, along with the accompanying correct answer key) and at the end of
each test, it will tell you how well you did, allow you to review the
missed questions, and allow you to take another randomly generated test.
If you can consistently score over 90 on the tests, it's almost a sure
guarantee that you will be able to take and pass the VE proctored test.

Note that these stacks will only work on a MacIntosh computer.
HyperCard version 1.2 or later is required; they were generated with
HyperCard version 1.2. Because HyperCard data is NOT stored in any
ASCII form, there is no way that this data can be used on other
computers, including IBM PCs, so please don't ask for the impossible.

Also, I do NOT have access to email these stacks over the computerwaves, nor do I have ftp capability. There are a couple of sites which are supporting these stacks via ftp, as follows:

These stacks are supported by ftp by Charley Kline, c-kline@uiuc.edu. To access the files, type "ftp vixen.cso.uiuc.edu", log in as "anonymous", with your email address as the password. Type "binary" at the prompt, then type "cd pub/ham-radio". The five hamstacks are (eg): novice-v3.2.hqx.Z, technician-v3.3.hqx.Z, general-v2.2.hqx.Z, advanced-v2.2.hqx.Z, and extra-v2.2.hqx.Z (or similar names). To retrieve one of the files, (for example, the Novice one), type "get novice-v3.2.hqx.Z". When you're finished retrieving all the files you want, type "quit" to exit ftp. Each file must be uncompressed before moving it to the Mac: "uncompress novice-v3.2.hqx.Z". You need to use Kermit to transfer the files to the Macintosh. The files must then be un-binhexed by UnStuffit, then unstuffed by UnStuffit.

The latest versions of the stacks are shown below, and are compressed with Stuffit Classic. UnStuffit is included on the diskette. These versions include modifications for NoCode (very minor changes from v3.0 or v2.0).

Novice version 3.3
Technician version 3.5
General version 2.3
Advanced version 2.3
Extra version 2.3

If you wish to receive these PUBLIC DOMAIN stacks from me, please send me a SASE (self addressed STAMPED envelope - 2 ounces postage = .52) and 800K diskette. I will no longer send out the stacks unless the envelope has sufficient postage for return mail (in general, that means .52-.98, depending on size of envelope) and for those who send a standard business envelope, I take no responsibility for the condition of the diskette through USnail.

Thank you for your attention.

In article <3h66qb$h3j@godot.cc.duq.edu> SYJERRY@duq3.cc.duq.edu (Sy Jerry) writes:
I have just started using an iambic key and only use one paddle at
a time (no squeezing) to generate my dih and dahs.

can somebody tell me what the the characters that can take advantage
of squeezing the two paddles ? also, any additional techiniques for
more efficient use.

Any character that has one or more elements (dit or dah) surrounded by
the other element will qualify. Examples are
C dah-dit-dah-dit dah pressed first and released first
F dit-dit-dah-dit hold dit, tap dah after second dit starts
K dah-dit-dah hold dah, tap dit after dah starts
... and so on...

There doesn't seem to be a 'standard' for paddle wiring. Some folks
have dits on the thumb, some want dahs there. Some folks send right
handed, some left handed. Do whatever seems 'right' to you. I prefer
to hold a pencil in my right hand (I'm right handed) and send with
my left hand. I believe my left thumb is less responsive than my
left index finger, so I key the dahs with the thumb. I believe most
people prefer a different style, but this one works for me.

FWIW: I've tried to use a straight key and it sounds HORRIBLE. I learned
on the paddles (implies a keyer does my character element generation)
and never developed the timing for a straight key.

If you can wait until the forth weekend in June, you can easily work all 50 states on both CW and SSB in one weekend.

Or, if you miss a couple, you can wait until the CW or SSB Sweepstakes in November.

Either way, working all 50 in a contest weekend isn't really difficult.

Don't overlook radio contests in your quest for awards. They can produce contacts you might never otherwise complete.

Besides, they are a lot of fun!

A new hamfest called HamRadio 95 is coming to Atlanta on April 7-8-9,1995. To be held at the North Atlanta Trade Center off I-85 and Indian Trail, the show promises to be a good one with major commercial exhibits and hundreds of flea market spaces. To be held concurrently will be DXPO 95, a DXers delight sponsored by the Southeastern DX Club. A full track of forum speakers includes Al Hernandez, VP8SGP who will just have returned from South Georgia Island. Many other famous DXers will be speaking and in attendance. Gordon West will be the featured speaker at the Saturday evening banquet and Bob Grove will be a featured speaker at a Saturday SWL forum as well. Other forums include a QRP forum with Paul Carr-CQ author, and Packet with Buck Rogers, also of CQ fame. This ARRL section convention will host a number of representatives from the ARRL including Rick Palms and Frank Butler. QCWA, MARS, the FCC, ATV, and the SE Antique Radio Society will also be topics of discussion and presentation. For further information, call 404-518-7376 or fax 404-642-9035. Dogwoods will be in bloom, so join us for HamRadio 95!

I suppose. Here in America, "Dames" are self-made!
--

A priest asked: What is Fate, Master?
And he answered:
It is that which gives a beast of burden its reason for existence.
It is that which men in former times had to bear upon their backs.
It is that which has caused nations to build byways from City to City
upon which carts and coaches pass, and alongside which inns have come
to be built to stave off Hunger, Thirst and Weariness.
And that is Fate? said the priest.
Fate ... I thought you said Freight, responded the Master.
That's all right, said the priest. I wanted to know what
Freight was too.

>Great. The League shafts amateurs again. Thanks to this gem, we now
>end up with no-clue CBer's without HF access holding W and K-prefix
>1x2 calls.

I started in scanners, worked a little 11m but left because of the lewd language and profanity. I became a Technician and am proud not to have heard any profanity in over two years of listening, except for one occasion over a repeater. The gentleman who let that word slip immediately appologized to the person he was speaking with and anyone who may have been listening. I purchase a shortwave receiver and listen to 20m and 80m phone. I was shocked to hear the same kind of trash and horrible operating practices that could be plainly heard on the CB band. What kind of incentive is that to upgrade? It would be like stepping from the curb into the gutter.

BTW, I don't hear any "no-code" technicians on HF. If we are wrecking amateur radio as the gentleman claims, why are parts of the HF band sewers without us?

SB QST @ ARL $ARLB012
ARLB012 Allocations at 2400 MHz

ZCZC AG78
QST de W1AW
ARRL Bulletin 12 ARLB012
From ARRL Headquarters
Newington CT February 7, 1995
To all radio amateurs

SB QST ARL ARLB012
ARLB012 Allocations at 2400 MHz

Allocations at 2400 MHz

The FCC has reallocated 50 MHz of spectrum, including 2390 to 2400 and 2402 to 2417 MHz, from government use. The Commission made these segments available for unlicensed, low-power devices including wireless LANs. At the same time, the FCC elevated Amateur Radio's status in those segments from secondary to primary. This means that amateurs will not have to protect any other user of those bands, and amateur stations are entitled to protection against interference.

The Commission made available 2390 to 2400 MHz for use by unlicensed Personal Communications Services (PCS), and provided for continued use of 2402 to 2417 MHz by traditional unlicensed ''Part 15'' electronic devices.

The unlicensed PCS devices, which include wireless networking and data transfer devices, will be governed by the same rules that apply to PCS devices operating in the 1910 to 1920 MHz band.

The FCC said it believes these allocations will provide for the continued development and implementation of a new generation of advanced communication devices and services, including a new ''on ramp'' to the information superhighway.

The remainder of the 50 MHz of allocated spectrum is at 4660 to 4685 MHz, to fixed and mobile services, an allocation not directly affecting amateurs. (Action in ET Docket 94-32.)

Source record: 252416

Hello,

I just got hold of a Motorola Mitrek radio and have some questions..

It is model# T53JJA1900AK from my manual, it is a 60 watt radio, 4 channel, with CSQ. My question is the AK.. what exactly does this mean? It isn't listed in my manual. Also the chassis numbers and the power amp board #'s aren't shown in my manual. Chassis #HUD1012A and Power Amp #HLD4022A3. Could this just be a running revision or ???? I just bought the manual for my other Mitreks and they are listed. Many thanks for you time in helping me.

Can someone help me with my HR-2510 ...

It makes a terrible POP sound when squelch closes and when you press the PTT.
And when you talk on AM or SSB your speech can be heard from the loudspeaker

Have anyone faced the same problems? I am using this radio with a transverter,
it works fine! Only these small details bother me.

Mail to lakki@krk.fi

I sligltly disagree with you..CW is a skill, but a personnal one..
If you really want to talk to someone in HONG KONG just call them on the telephone..No real skill in doing this is it..But to communicate with someone who speaks a different language (but the same CW language) is a skill..To copy someone sending CW when its about five other stations on the same freq or close to it is a skill..Sure all modes have skilled operators but to copy a station and send to him without a amp or beam and get thru a pileup on CW is also a skill..(and dont forget the bad sunspot cycle at this time)..I admit I am Bias a little but I only use a barefoot transceiver and a vertical and I can not fathom any other mode but CW that I could have 300 countries confirmed..Maybe someday I will invest in some expensive antennas and ampes and TNC's and computers. Maybe it could be fun..After all thats what Ham Radio is about anyway is fun..(I do ask myself sometimes why would anyone sane stay up half the night just to get a 599 from a new one) N4RUM Virginia

1724. Shortwave Broadcast Intership

Newsgroup: rec.radio.amateur.misc

From: mdaless@eis.calstate.edu
Message-ID: <3h8ps0$j5@eis.calstate.edu>
Source record: 252418

Everybody-
At our high school, seniors are required to get an internship at
an company or organization outside our school. Members of our school
amateur radio club have expressed an interest in working at a shortwave
broadcast station. These students have advanced class amateur radio
licenses and are knowledgable of basic radio and electronics principles.
They are willing to learn, and most importantly, work for free. If
anybody out there knows people who work for a shortwave broadcast station
anywhere in the world, please respond to my e-mail (mattd@branson.org).
Internships in any aspect of the shortwave broadcast industry would be a
fantastic opportunity for these students.

>If so, it would probably be a hassle to use my Kenwood TH-22AT. Thanks,

In France all the repeaters are opened by a 1750 Hz tone burst. CTCSS or DTMF codes to access
repeaters are forbidden (!) This means that all the repeaters are open. Phone patch is also forbidden.

Do not forget that the 2 m band is 144 to 146 only in France (although there is quit a lot of illegal traffic
between 146 and 147, including packet bbs!).

I have no idea on how to obtain a visitor permit, as I got my license in the us.
If you want a map of the repeaters, let me know i will try to fing one in a French magazine,
and send you a scanned version.

Have fun
Bernard , KB2TGH.

Two employment lists are currently open for application:

Communications Tech II $33,426 - $39,437

Communications Tech I $25,917 - $33,426

If you are a resident of Maricopa County and have a valid Arizona
driver's license, you can apply at :

City of Phoenix Personnel Department
Employment Services Division
135 North Seconds Avenue
Phoenix, Arizona 85003-2018
602-252-JOBS

The list is valid for ONE YEAR. During that time, any City department
seeking this type of employee *must* hire from the list.

If this notice goes beyond Arizona, please disregard. I made every
attempt to limit its scope.

> Thanks in advance!

I noticed the same problem when tuning the CB in my truck while using a 3' Firestick. I just did the measurements with the plastic cap on, removed it to tune, then replaced it and measured it again. I'm guessing your antenna has the little threaded slug under the end cap? After enough iterations, I was able to tune it in with the cap in place. Not sure why a little piece of plastic affects the antenna so much.

>It looks like a small few would like to speak for the majority. I for one
>will speak for myself. Leave the ham radio autors alone, and take your
>spams & flames to some other usenet. Hams who create and offer something
>for other hams should be allowed to speak about the product they create.
>You are not the FCC and this is not the amateur radio band. Commercial
>discussion is NOT prohibited here.

You're entirely right, IM:

I'm going to start a business offering visiting hams to Hawaii
sailing and scuba diving lessons. They can operate maritime
mobile from my sailboat, and while diving (waterproof pouch for your
HT included free with each lesson!). And I'll provide Morse code
instruction during the sailing lessons for those wishing to upgrade.

With your permission I'll do all my advertising right here.
To heck with the accepted peer customs that have been in place
for years. This is the I'll-do-what-I-please generation so it's
okay to break from tradition.

Is that alright with you, IM?

And each of the estimated 30,000 readers to this newsgroup can do
the same. I'm sure every one of them can think of a ham-related business
to run on here. 30,000 ads per week. Better than QST+73+CQ!

73 from beautiful Hawaii,
Jeff NH6IL

I have no experience with Tesla coils myself (but have seen
some impressive demonstrations). But the following two items
might be of interest:

There is a Tesla coil builders society. Unfortunately, I don't have
their address, but they set up a table at the Richmond, VA hamfest.
Maybe someone else reading this will remember an address.

There is a "TESLA" file on the ARRL server. The info on the file is:

TESLA 8k 930916 Where to get info about Tesla coil - construction
article

To get this file send Email to info@arrl.org with the one line
command:
send TESLA

For more information on the info server send commands:

Heidi Marcelo <hmarcelo@freenet.columbus.oh.us> wrote:
>
>here's a simple question with wich i keep getting conflicting answers to:
>does electricity flow from positive to negative, or vice versa

Yes, either (or both)!

If you learned to think of the flow of electricity as being like
water flowing, the answer to this question might be a little strange,
because it could be either direction.

The "conventional current flow" (which someone already mentioned) is
the direction of flow of positive charge. Positive charge flows
from the positive terminal of the power supply, through the circuit
and back to the negative terminal.

The electron flow is, of course, the direction electrons are flowing.
Since they have negative charge they flow from the negative
power supply (or battery) terminal through the circuit to the positive
terminal.

You might wonder why anyone would use conventional current flow
since it is actually negatively charged electrons flowing through
the wires. For many purposes it doesn't matter what the charge
is being carried by. When you are working with capacitors, inductors,
resistors, transformers and motors you can work with positive
current flow and you don't have to know that there are electrons in the wire.
In fact, there is no way to tell.

Vacuum tubes are a bit harder to understand unless you know about
electrons flowing from the cathode to the anode (plate).

Bipolar transistors add a bit to the discussion. They have both
negative charges (electrons) flowing from negative to positive
and positive charges (holes) flowing from positive to negative.
A hole is just a place in the silicon crystal structure where
an electron _isn't_ but normally would be.

Also, remember that some types of plastic, specifically PVC are RF sponges, and some have been known to melt at relatively low power levels. That means the energy is going somewhere and doing you no good. Maybe the BEST thing is to remove the cap. Also, for the antenna you describe, if it is a loaded 1/4 wave, the end will be at a very high voltage potential, another potential location for RF to be sucked up, and SWR measurements out of sight!

1749. Re: R7 Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-08 08:06:24 UTC
From: Phil <mir@delphi.com>
Message-ID: <BuyZD5I.mir@delphi.com>
Source record: 252292

Hi Larry,
I have an R-7 and also have no idea what the Ferrite Beads would do, other than create a mis-match in your feed line.

With any antenna, if located very near the equipment and not well grounded the potential for RF feed back will increase greatly.
3kw anntena tuner with the antenna on my roof
20 feet above ground on the opposite side of the house from my station and have not had any feed back problems. The tuner keeps a nice flat SWR and the ant. works very well. I have had it for about four years and there is a problem that seems to develop in all R-7's. After a few years the rivit that holds the main bottom section into the fiber glass boot at the base of the antenna tends to get loose. After a few years there is a lot of play. Some guys have been known to drill a hold right through the fiber glass boot and antenna base, then insert a small bolt and nut for extra protection in case the rivit gives way... When you look at the antenna contruction you will understand what I'm saying. Other than that, my R-7 has done very well living through 3 northeast winters. wind, snow, ice and all!!!
Have fun with your R-7 and follow the instructions regarding the feed line. RG-8 will do fine!!!
In the meantime, 73, de Phil

Message-ID: <3ha26c$e7t@newsbf02.news.aol.com>
Source record: 252293

I owned an R7 and worked 150 countries on 100 watts in less than 6 months on it. It has a great low angle of radiation for DX. However, the gentleman who spoke about RFI was correct. I would recommend running at the very least a good ground bus and antenna ground, as well as a low-pass filter (B&W makes a nice one, as does NYE) before the feedline leaves the shack. An omnidirectional antenna is just naturally prone to creating more interference on TVs and phones than is a beam or a quad.

A long time ago, the ARRL announced that QST would be available on the newsstands. Since then, I have never once seen the magazine on the dozens of stands I periodically visit. Has anyone ever seen the magazine? Once, I bought a copy of what I thought was CQ magazine, but when I got home and put my reading glasses on, it turned out to be "GQ" instead, which I thought was odd since the photos showed quite the opposite of what fellow hams dress like at a typical hamfest. ;-)

All,
I have ben using a wonderful programme to track satellites which is so good, Johnson Space Center uses it for tracking purposes as well as Nasa, INtelsat and others..
It's called STSPLUS and has a myriad of features including doppler shifts for ham satellites, ground tracking, can track up to 16 objects at a time, has zoom, many more features and needs a POWERFUL system (386 and up, plus math coprocessor (included in the 486 chips).
It's easy to get. Call 310 5417299 (2400-14.4kb/s) and download files SOP9445A.ZIP and SOP9445B.ZIP to get the latest version. It's written by Dave Ransom, an ex-JSC specialist who also runs the BBS. It is also available (I believe in NASA's WWW).
Enjoy!
Peter

<andyneal-0702950229080001@sharkbite.hip.berkeley.edu>

A good friend of mine, Bob (KG5OE) lived for a short time within several blocks of KOMA, a 50,000 watt am transmitter in Oklahoma city.

You could hear the radio station when you opened up the refrigerator door. Telephone interference was a problem as well until he installed brute force rfi filters on his lines.

The radio also could be heard from the electric baseboard heaters dispersed around the wall. It was especially annoying when trying to sleep and the normal daytime background noise fell off.

He told me about this situation and I really thought he was pulling my leg. I became a believer while visiting him and witnessing these queer events myself. Obviously some peculiar forms of rectification.

Ferrite beads placed on a feedline do nothing for the match, and will NOT create a mis-match. What they CAN do is choke off unwanted currents flowing on the outside of the shield. (I'm taking your comment literally, and out of context, and my comment may thus not be directly appropriate to yours.)

Heidi Marcelo (hmarcelo@freenet.columbus.oh.us) wrote:

: here's a simple question with wich i keep getting conflicting answers to:
: does electricity flow from positive to negative, or vice versa

And now for a completely different view:

I like to think of current like I would current in a river. That is, current is the flow of something: water in a river, or charges in an electrical circuit. This matches my dictionary definition of "current." In this way, current does not flow; current exists. If you can accept that, then you should have little trouble with "which way" since it's not the current that's flowing.

Clearly, negative particles like electrons or negative ions are pulled by an electric field in a direction from negative to positive, and positive particles are pulled by an electric field from positive to negative. But consider something like a generator with a resistor load. Electrons are going from positive to negative in the resistor, but from negative to positive in the generator. That's because there is another force besides the electric field operating on them, pushing them that way--in this case, it's a changing magnetic field. But it could also have been chemical energy, in a battery, or it could be mechanical work, pulling the plates of a capacitor further apart.

So--charged particles flow in response to things like fields. The rate of flow depends on the type of particle and the material through which it is moving. Current is measured quantitatively by the amount of charge which passes a point per unit time, and is taken to be positive, generally, if the charge is moving in the direction that the electric field causes the particles to move.

(Yes, you can get deeper into this and start asking questions like, "If there is a current here, how long will it be till there is a current over there?" When you start talking about how currents change over time and space, then you might be justified in talking about currents "flowing." But by that time, you might better be served thinking in terms of "waves.")

|>Please don't suggest cable TV. I know that will fix it, but I'd like to
|>postpone that expense for a few more years. If there were a cheaper
|>solution I would welcome it.

Paul, you first need to determine how the interference is getting into your
TV set. Although it may be through the antenna, that is easily verified
by disconnecting the antenna at the TV and see if you can detect any change
in the picture when you key up the radio. If you still see some change in
the picture, then the interference might be through the case of the
TV (I've had this happen in hotel rooms when operating an HT!). That can
be a difficlt problem to solve as shielding the TV set case is difficult.
A conductive spray on paint might do the job. Make sure to run a conductor
from the case to ground before spraying.

It may also be coming from the power lead. A clip on ferrite core such as the
kind sold by Radio Shack may be of help there.

If the interference is coming from the antenna lead (most likely), then you
need to determine if it is travelling along the shield or the center
conductor. Assuming you are using coax for the TV antenna (if
not, that is the first thing to change, i.e. use good quality 75 ohm
coaxial cable and a 75 ohm to 300 ohm transformer if necessary) then
wrap a number of turns of the coax around a large ferrite core. If
the interference problem gets better or disappears then you probably
probably can cure the interference just by increasing the number of turns
of coax.

If the interference is entering the TV set by way of the inner conductor, then
you need to connect a band stop filter to the back of the TV set where the
antenna connection is made. In fact, one at the antenna and one at the TV
set would even be better. The simplest and cheapest band stop filter is a
quarter wave section of coax. To calculate the length of coax needed, you

need to consider the frequency of operation and the velocity factor of the coax. For true RG-6 it should be 75%. The length is calculated as:

Length in inches = (2951 * velocity factor) / frequency in MHz

So for 146 MHz you end up with 15 5/32 inches of coax. Connect one end to the back of the TV set in parallel with antenna coax (or add a connector and use a T connector.)

Or maybe the amp up at the antenna. If he has an outside antenna I won't be surprised if there is an amp up there too. If you have an antenna mounted amplifier, my experience - at least with the RS ones - is that they don't take kindly to strong RF sources. The sherrif's repeater about a half mile away used to do a job on mine. My local gear really wiped it out. Fortunately I either operate OR watch TV. Not both.

You better believe it! I wrote two letters of complaint to Peter Kirby,
the RSGB's General Manager, in December 1994. I have still had no reply
to either! He said in the preface to this year's Annual Report, "Complaints
are now almost non-existent". Easy to say if they bin 'em as soon as
they arrive!

I have been an RSGB member since 1958, but am seriously considering not
renewing my subscription this year as they treat their members with
such contempt.

I agree with all of this. Trying to put my feelings about mine
into tabular form:

Pluses: - Small physical size
- Lots of "features"
- Produces good sounding signals
- Is fairly sensitive

Minuses: - Wide open front-end (lots of break-through from
local high power signals).
- Lots of "features", remembering how to use them
is a pain.

|> If so, it would probably be a hassle to use my Kenwood TH-22AT. Thanks,
|> Robert WD5AAT

Yes, French (read European) repeaters use a 1750 Hz tone burst to
open up the repeater. Depending upon how pedantic the repeater builder
was, and how good you are at whistling, it is often possible to bring up
a repeater by whistling at it.

Many (most ? all ?) repeaters also use the tone burst to re-set the timers.
So although you *can* work someone if they open up the repeater, you run
the risk of it timing out on you if you don't have a tone burst.

Now, the licensing procedure ...
I didn't want a temp. license, I wanted a reciprocal license.
It took a *LONG* time, and required a good knowlege of French.

Call the French consulate for information about the reciprocal license.
But beware that they will give you a 900 number to call.

Would anyone happen to have a schematic for a low power VHF-FM micro transmitter? (Or know of a web/ftp site where I could find one?)

Thanks-in-advance.

* Remove Antenna and Battery

* Remove (6) black screws in rear plastic cover plate
(where the battery would normally fit)

* Remove the (1) small black screw in the battery slide switch
(see figure 1 below for screw locations)

* Loosen (but don't remove) the (4) black screws on the upper
back of rear case and slightly separate the rear radio
case.

* Remove the "L" type plastic cover

CAUTION: Watch out for the delicate ribbon cable

* Locate and unsolder jumper pad #6 (see Figure 2 below
for jumper locations) (Pads 1,7 should now be jumpered)
(Stock, Pads 1,6,7 only)

* Reinstall the "L" type plastic cover

* Tighten the (4) case screws on rear case

* Re-install the (6) black screws in rear plastic cover
plate.

* Re-install the (1) small black screw with the battery
slide switch

* Now attach the antenna and battery

* Turn off Radio... Press and hold both UP & Down Arrows
Keys (right side) while turning on the Radio

* Modification now complete!

(Figure 1 not rendered; my ASCII art skills aren't that good)

Figure 2: Jumper locations. For European tone burst, add solder
to jumper 4.

I am proposing the creation of alt.radio.amateur.tenten.

Purpose: for members of the Amateur Radio Organization known as Ten-Ten International to discuss events and issues related to their participation in Ten-Ten and useage of the 10-Meter radio band as it reflects on the organization, and vice-versa. Also to eventually have officers of the organization who have internet connections participate, if possible, in a wholly non-profit manner.

I brought this issue up in rec.radio.amateur.misc several times over the course of the last year or so, and while there didn't seem to be enough interest *currently* to justify going through the whole RFD and CFV etc for a rec.* group, there was some positive interest in forming an alt.* group FIRST, and if the interest grows, seeing about moving it to the rec.* heirarchy.

There may well be other Amateur Radio organizations that wish to form similar groups, OR, at some later date to combine together for something like rec.radio.amateur.orgs or something like that.

In the meantime, I invite those who emailed me after reading my original posting to rec.radio.amateur.misc to discuss my proposal with the alt.config folks and see if it will fly.

: Howard Lester KE7QJ

Your right on target Lester. Since the R7 is feeding the high impedance
end of a half wave, currents can flow on the shield. If the box on the
R7 is any thing like the box on the R5, there is also a transformer in
the box, along with the choke.

Ferrite is a hams best friend.

VK2 DIV PRESIDENT'S MESSAGE

This is Michael Corbin VK2PFQ

Well that was the worst week on record...No, not for the Institute but for my business. I'd be a liar if I said that the W.I.A. wasn't wearing a little thin at 80 Lalor Rd., Quakers Hill. Anyhow it's surely a case of "If you can't stand the heat...don't come into the kitchen" I'll bore you no further with my personal problems, but once again appeal for people to do some painting, electrical work and general cleaning up of our downstairs premises in preparation for leasing.

Perhaps as an added incentive, we should offer one years free membership to anyone who helps. Anything to get the job done. On a more positive note, after 4 full days on the job running backwards and forwards from Quakers Hill to Parramatta (via Seven Hills), we have at last sent the last letter, or rather copy of letters, to the politicians as well as all affiliated Clubs. Indeed, if you fall into this category, you should receive your letter on Monday or Tuesday. I've also sent copies to AR & ARA Magazine It will be interesting see how our Federal President handles this one....Perhaps you should reserve your copy of ARA now!

My thanks must go to CESAR MIRANDA VK2TCM for the time that he has put into this exercise. So that The Minister and all his confreres would gain an appropriate impression of the Wireless Institute of Australia NSW Division it was necessary that our submission was produced in a professional manner. The previous Council used to PAY for the privilege...Nobody knew this at the time...But more of that in the Annual Report. To continue... Cesar offered his time and his fancy Laser Printer...The result....A more than Professional job. I only hope that it will impress those to who it was sent!!! I'm sure that this will spur the opposition's Minister for propaganda into print. I refer of course to Cesar's involvement NOT the professional job. You know, come to think of it....He hasn't had very much constructive to say lately

Again once more I appeal to people, who have not written to do so. If you think that the licence issue has been won, think again. I will shortly read a letter, which has been written by Ms. Christine Goode, the Manager of the Spectrum Management Authority on behalf of the Minister to a fellow Amateur. Listen carefully. She is quite clear in her statements that the fee increases are here to stay. There does however seem to be an admission, that the politicians have

the last say....So, once again, if you have not written -- write now!!!

This weekend the Federal Councillors meet in Victoria. The agenda is not clear at this stage. A full report next week. I have yet to see any positive input from the Federal Office, save for criticism of this Division for giving them a hard time. I don't withdraw or apologise from this position. This Division has put in our submission. Where's the one from Federal....Talk, talk, talk that's all we have heard from them. Oh yeah, I understand, I have not seen it yet, that there is an insert in AR this month. This Division offered to do this, but our offer was only met with a call from a chap in VK5, who told us that he had been empowered by the Federal President to do it instead. Oh well...at least it was done.
I wonder why we weren't allowed to do it....funny mob those Federal people or perhaps there's some outside influence !!!!?!* Since writing this epistle I have been informed by Peter Kloppenburg VK2CPK, our Federal Councillor, that I was to be the first item on the agenda after lunch....Perhaps someone else ought not to go into the kitchen unless.....etc. etc

Well here's the letter which was written by Ms. Christine Goode, on behalf of the Minister, for Communications and the Arts, Mr. Michael Lees. Listen carefully, it's not very encouraging, but remember there has, as yet, been no vocal presentations by any overweight ladies -- you're not allowed to say... "the shows not over till the Fat Lady Sings" anymore...anti vilification Laws and all that....Now on to that letter. Please pay careful attention to the WORDS used by M/s Goode.... Note that she continually refers to FEES as TAXES!!!!! Hmmmmmmmmm!!!!

SPECTRUM MANAGEMENT
AGENCY (Letter head)
3 February, 1995

Dear Mr. .....So & So.....and I quote...

Thank you for your letter of 3 January 1995 to the Minister for Communications and the Arts, the Hon. Michael Lee MP, concerning the proposed changes in licence fees for Amateur Radio Licences. The Minister has asked me to reply on his behalf.

Firstly, I want to stress that there is no new tax being proposed for users of the radiofrequency spectrum. The fees which you and other users (such as those with landmobile systems or fixed link) now pay are in fact taxes. The taxes are levied under the Radiocommunications (Transmitter licence tax) ACT 1983. The overall level of revenue collected from current licenses is not being varied. There will, however, be a fairer sharing of the fees/taxes amongst all categories of licensee. Some will pay more and some will pay less.

The Spectrum Management Agency (SMA) has just completed a review of all aspects of apparatus licensing including the structure of radiocommunication

license fees. The review concluded that there should be a more equitable and efficient method of calculation of fees (ie, taxes) for all licencees. In future the license fees will more accurately reflect the extent of actual spectrum use by each licensee. Further, within the total fee/tax, the cost recovery component will be identified.

In the specific case of amateurs the proposal are, that fees will be increased from between $8 and $34 depending on the category. The highest level of fees (Unrestricted Amateur) will be $71 which we regard as quite reasonable in comparison with other license fees and the large amount of spectrum available for amateur use.

The SMA will publish an information paper shortly on the outcome of its inquiry into apparatus licensing, including more detail on fees and recovery of SMA costs. We propose to then have detailed consultations with representatives of licensees who are substantially affected by the changes. These consultations will take place over the next six weeks or so. Indeed the information we passed to the Wireless Institute of Australia was advance information for the specific purpose of obtaining their comments and to assist further consultation.

I want to assure you that the SMA appreciates the good work done by amateur radio enthusiasts in providing services at various times to assist the community. I am also aware of the benefits in encouraging young people to learn about radio technics. These aspects do not, however, affect the basic principle that amateurs who use the radio frequency spectrum should meet their share of the costs of managing the spectrum for the benefit of all users.

I understand that some amateurs are concerned that the SMA is imposing charges which are not made in other countries. The approach taken overseas varies widely with some countries not charging fees to any users of the radiofrequency spectrum. However the most common approach is for fees to be charged for spectrum use, although the level of fees varies widely.

Some amateurs have compared amateur use of the spectrum with that of CB operators, which is now covered by a class license. We see amateur and CB as quite different services. Amateur services require greater co-ordination both nationally and internationally for frequencies and call signs, with amateurs other than novices having access to vastly more spectrum than CB operators. The SMA also applies significant resources to handling problems of interference involving amateurs, mainly in cases where amateurs cause interference to other services. In the submissions to our public inquiry, the weight of opinion was against class licensing for amateurs.

I have attached copies of a recent media release and a brief information sheet which gives further details.

Thank you for your interest in this matter.

Your sincerely,

CHRISTINE GOODE,
SPECTRUM MANAGER.

Included with this letter was a copy of the Press Release I read out for you a few weeks ago, as well as a Resume of the History of the whole matter. I'll now read that for you now.

INFORMATION PAPER

INQUIRY INTO THE APPARATUS LICENSE SYSTEM BY THE SPECTRUM MANAGEMENT AGENCY (SMA)

...and I quote...

The SMA, as a result of its inquiry into the apparatus license system, is proposing to make a number of changes. The key proposals involve restructuring license fees. There are over 250,000 licenses on issue with annual fees ranging from $18 (marine rescue) to $734,132 per MHz (PMTS). Under the proposed restructure there would be a consistent, more equitable approach to fees. They would be based on SMA costs, and the amount and relative scarcity of spectrum used by each licensee. As the current fees have been largely developed on ad hoc basis over many decades without major review, the proposal would mean that some fees would increase but many fees would decrease. Consultations are to be held with a number of key industry organisations and others. An information paper is to be published by mid January 1995.

INTRODUCTION

On 8 December 1993, the Minister for Communications at the time directed the SMA to hold a public inquiry into the apparatus license system.

The apparatus license system enables the SMA to provide access to the radiofrequency spectrum to individual users by way of a license to operate devices. The SMA may determine the type of Transmitter licences and receiver licenses it may issue under the apparatus license system. Licence types are specified in determinations made by the Spectrum Manager. There are currently 94 types of transmitter license and 10 types of receiver license. There are currently about 250,000 licenses on issue (including approximately 20,000 amateur licences).

The aim of the inquiry was to develop a more streamlined and simplified apparatus license system incorporating a transparent equitable and efficient fee methodology, consistent with the objectives of the new ACT. The terms of reference are attached.

INQUIRY PROCESS

In accordance with the terms of reference specified in the Minister's direction, the SMA developed a proposal of reform. These were published in a discussion paper, Inquiry into The Apparatus License System, released in January 1994.

The SMA held public seminars during February and March 1994 in each of the 14 centres where the SMA has offices. They attracted more than 900 people.

Public submissions on the discussion paper totalled 422. They covered a wide range of issues and provided a mix of views on how the apparatus license system could be improved. Submissions were made by individuals and a range of organisations. A report was provided to the Minister for Communications and the Arts on 31 May 1994.

IMPLEMENTATION

The SMA is now working towards implementing the proposals. The major areas of activity are:

1. the development of new apparatus license types (to number around 20);

2. a system to allow for the transfer of license between users;

3. a system to provide for different license periods up to the statutory limit of five years;

4. a system to allow licences to choose between paying for license fees up front (ie at the time of license issue) or by annual instalments;

5. concessions on annual license fees be provided to private, ,volunteer non-profit organisations involved in the safety of human life; and

6. The restructuring of annual license fees to incorporate three components:

i. a component to cover the cost of issuing the licence;

ii. a component to cover the spectrum maintenance costs of the SMA, and

iii. a spectrum access component to provide a return to the Commonwealth Government for the use of a community resource taking account of the spectrum and geographic location of the spectrum access, and the bandwidth and area of coverage of access.

All licence fees are taxes and the revenue from license fees is passed onto the Government. The proposed restructure does not mean changes in the level of revenue flowing to the Government from users of the spectrum. It is simply a restructure of the fees.

Licence fees would be levied on a more equitable basis, as they would be based on SMA costs, and the amount and relative scarcity of spectrum used by each licensee. By incorporating SMA cost recovery components, licensees will be able to identify SMA costs and there contribution to the costs. In addition, the fees include a spectrum access component so that licensees with large spectrum holdings in high demand areas would pay higher fees than other licensees. Some fees would increase but many fees would decrease.

The SMA is commencing consultations with a number of key industry organisations and others. The SMA has met with the WIA and explained the new proposals. An information paper on the outcomes of the inquiry is being prepared and is expected to be published by mid January 1995.

The proposals are intended to coincide with the establishment of the SMA's new computer system, RADCOM, in April 1995.

Spectrum Management Agency
3 January 1995.

Well that's it for another week. Could I please have someone to do the electrical work and painting. If I hear nothing by Monday, we will just have to pay someone to do it! If anyone wishes to have a copy of this information..... Indeed, any information contained in any of my Broadcasts...Just ask

See you next week

VK2 LETTER TO COMM. C'TEE MEMBERS

WIA LETTERHEAD.......

Hon. Leo McLeay, MP 31st January 1995
PO Box 324
KINGSGROVE NSW 2208

Dear Sir,

Enclosed herewith please find a copy of a submission I have made to The Minister for Communications and the Arts, and The Minister for Tourism The Hon. Michael Lee MP concerning an increase in fees for Amateur Radio Licence holders. I have taken this step as you are a member, indeed Chairman, of this Committee.

I ask that you read this submission before any final decision is made on the matter of increased charges. I take issue with a recent Press Release issued by the Opposition Shadow Minister in which he stated that "proper Consultation" had not taken place. Indeed it seems that some Consultation did take place....It was unfortunately with persons from our Federal body who perhaps lacked the necessary drive and application.

Your attention is particularly drawn to the final paragraph of our letter to The Minister where we suggest that the Administration of the Licencing system be handed over to The Wireless Institute of Australia. Currently our Organisation conducts qualification examinations. This function was formerly under the care of the old Department of Communications.

If you are in need of any further information on this subject I would be only too pleased to any answers you may require. Please contact me on my home telephone number (02) 626 9288 or by Fax on (02) 626 6066.

Yours Sincerely

Michael B. Corbin
PRESIDENT

Encl. Copy of our Submission

VK2 DIV LETTER TO PAUL KEATING

(WIA letterhead)

31 January, 1995

THE HON. PAUL JOHN KEATING, MP
Prime Minister of Australia,
Suite MG8,
Parliament House
CANBERRA ACT 2600

My Dear Prime Minister,

Enclosed herewith please find a copy of a submission I have made to The Minister for Communications and the Arts, and The Minister for Tourism The Hon. Michael Lee MP concerning an increase in fees for Amateur Radio Licence holders. I have also circulated this information to all members of your Transport, Communications and the Arts Committee.

I ask that you read this submission before any final decision is made on the matter of increased charges. I take issue with a recent Press Release issued by the Opposition Shadow Minister in which he stated that "proper Consultation" had not taken place. Indeed it seems that some Consultation did take place....It was unfortunately with persons from our Federal body who perhaps lacked the necessary drive and application to influence any outcome.

Your attention is particularly drawn to the final paragraph of our letter to The Minister where we suggest that the Administration of the Licencing system be handed over to The Wireless Institute of Australia. Currently our Organisation conducts qualification examinations. This function was formerly under the care of the old Department of Communications.

If you are in need of any further information on this subject I would be only too pleased to provide any answers you may require. Please contact me on my home telephone number (02) 626 9288 or by Fax on (02) 626 6066.

Michael B. Corbin
PRESIDENT

Encl.

VK2 LETTER TO MICHAEL LEE RE: FEES

(WIA letterhead)

30 January, 1995
The Hon. Mr Michael Lee MP,
Minister for Transport,
Communications and the Arts, and
Minister for Tourism.
P.O. Box 525,
The Entrance NSW 2261.

Mr. Minister,

RE: SUBMISSION CONCERNING THE PROPOSAL TO INCREASE
FEES FOR RADIO AMATEUR LICENSES.

I am taking the opportunity that has been provided, to send to you a submission concerning the proposed level of fees to be incurred by Radio Amateurs in the future. In this regard it is appropriate to note that this submission is a reflection of considerable dissatisfaction expressed to me by many members of the Wireless Institute of Australia New South Wales Division.

The attached statement has been prepared by a small committee of members and chaired by one of the Councillors of the Division. It is noteworthy that the committee has had access to virtually all of the membership of the Institute in this State via the Amateur computer based "Packet Radio" network. In this regard some hundreds of messages concerning the proposed fees scale have been available for perusal and reference.

The salient points of this statement are as follows:

1. The revenue already collected by the Spectrum Management Agency from the licensing of operators of radio equipment apparently exceeds the costs of administration of the "Spectrum" in the ratio 2 to 1.

2. On the basis of long-standing international treaty concerning the exclusive use of certain parts of the spectrum, the concept of "spectrum denial" is seen as irrelevant to the allocation of space to the Radio Amateur service.

3. Unlike commercial users and Citizen Band Operators, Amateur Radio operators are prevented by the terms of their licenses, based upon international agreement, from recovering any of the cost of their license fee for use of the "spectrum". The U.H.F. segment of the Citizen Band is used extensively for "Business Purposes"....Hardly equitable when one compares the costs of licenses to each group.

4. Late last year, the Spectrum Management Agency elected to forego license revenue from Citizen Band operators amounting to nearly $6.4 million dollars. By contrast the proposed increase in Amateur Radio operators license fees will amount to approximately 5% of the possible total revenue available from licensing all Citizen Band operators. This is seen as both irrational and inequitable.

5. There are major community benefits deriving from Amateur Radio activity, particularly associated with emergency support services. In l955 my late

father, the then President of the W.I.A. N.S.W. Division, was awarded the M.B.E. This was in recognition of the work done by Amateur Radio operators during the floods which ravaged most of N.S.W. Amateur Radio operators ran the entire rescue operation. More recently your attention is drawn to the Cyclone Tracy Disaster....The Newcastle Earthquake....Certificates of appreciation from the Lord Mayor of Newcastle adorn many amateur radio operators walls. More recently the N.S.W. Bushfire of 1994. An amateur operator ran the Helicopter Water Bombing Network....The S.E.S. Communication system had broken down....and all this was at NO COST to the community.

6. Amateur Radio provides a basis for obtaining an education and practical experience in radio and telecommunications, computing, data communications and processing and satellite technology at little cost to the Government.

7. In some countries overseas including the United States, Amateur Radio is considered to be of sufficient significance as to justify the abolition of licensing fees. In the U.S.A. Amateurs have a 10 year license which attracts a fee for issue to cover costs but otherwise is "free".

8. The abolition of license fees may well be justified on the basis of further devolution of administrative responsibilities such as licensing and fees collection to the Wireless Institute of Australia. This is the position with many professional Institutions in all the States. Presently the examination of candidates for Amateur Certificates, a function handled exclusively by the SMA in the past, is carried out successfully by the Wireless Institute of Australia.

9. Given the Public benefits accruing from the Amateur Radio service, any form of tax as an addition to the existing license fee is seen as totally unjustified and is strongly resisted.

I trust that this precis, when read in conjunction with the full statement, will make quite clear the position of this Division of the that the present proposals for fees increases are certainly not justified. Indeed what is suggested as a more appropriate direction to be taking is towards devolution of administrative responsibility from the SMA to the WIA and an abolition of the fee imposed upon Radio Amateurs.

To this end could we propose an urgent meeting with representatives of your department with a view to discussion of possible devolvement of license issue and administration to the Wireless Institute. We believe that such a solution will greatly reduce costs to the Government and achieve a mutually acceptable solution.

Yours faithfully,

MICHAEL B. CORBIN, VK2PFQ
PRESIDENT.

c.c.

The Hon Paul Keating MP,
Prime Minister of Australia,

All members of the Transport
Communications and the Arts Cttee.

Encl.

VK2 SUBMISSION TO GOVT PROP NEW FEES

SUBMISSION TO THE SPECTRUM MANAGEMENT AGENCY
CONCERNING THE PROPOSED INCREASE IN LICENSING FEES
FOR RADIO AMATEURS

PREPARED BY THE WIRELESS INSTITUTE OF AUSTRALIA
(NSW DIVISION), FEES SUB-COMMITTEE

PETER R JENSEN, VK2AQJ, (CHAIRMAN)
CESAR MIRANDA, VK2TCM
DAVID HORSFALL, VK2KFU
RICHARD MURNANE, VK2SKY

January 1995

INTRODUCTION

Since the very earliest days of radio, Amateur operators have been involved in generating some of the most important technical advances in the science of radio commuication. However with the extraordinary advances in technology over the last twenty years in particular, the significance of the individual in promoting new techniques has inevitably diminished, particularly in the face of research carried out by the major industrial organisations, most notably in America and Japan. In that same period, Australia's research efforts in the area of radio commuication and development have been severely attenuated. Conversely, during that same period the involvement of Amateur Radio operators with volunteer citizen emergency response type groups has significantly expanded.

From its earliest days of convict settlement, Australia has had a long history of depending on unpaid and volunteer organisations for some of its most important emergency functions. For example the

Bushfire Brigades and the State Emergency Service represent just two. In times of natural disaster, on many occasions, both in this country and overseas, communications has only been possible throught channels provided by unpaid Amateurs.

The Radio Amateur service remains a national resource not only for dealing with natural disaster but also as a repository of technically competent persons available as a source of operators for military and quasi-military purposes. In addition, the impact of communications technology on the youth of Australia has over the years directed many capable persons into the path of science and very much to the national advantage.

THE LESSONS OF HISTORY

During the 1930's, Adolf Hitler decided that such dangerously free-thinking organisations as the German Radio Amateur clubs were a danger to the intended thousand year Reich. Accordingly, he had them systematically closed down in favour of amateur flying and gliding clubs which ultimately became the genesis of the Luftwaffe. By contrast, the United Kingdom continued to support its radio amateur community until the start of the Second World War. Upon its outhbreak, many of the British radio amateurs were taken into the forces as signallers but perhaps even more importantly, many of them were absorbed into military related scientific research in newly developing areas such as RDF of Radar as it was later to be known, with extraordinary consequences for the result of the hostilities. As the war proceded, it became apparent that the Germans had lost a major opportunity to involve technically relevant people in the nation's scientific effort. It was a loss, it has been contended, that made a significant impact on the outcome of the War. In his fascinating book, "Most Secret War", the noted British Scientist, Professor R.V. Jones, pointed to the disastrous consequences to the German war effort of the decision by Hitler to disband the Radio Amateur clubs and inhibit radio communication activity in the pre-War period.

The conclusion to be drawn from these events seems clear. This is that the activities of Radio Amateurs are far from trivial or to be seen as simply a burden on the Public purse. On the contrary, they involve activities with a national strategic significance and represent a resource of major value in time of emergency.

GOVERNMENT OBJECTIVES

It has been asserted by the Spectrum Management Agency that the objective of its review of objectives and the proposed revised licensing fee to Radio Amateurs that has resulted, is directed at producing a "revenue neutral" result. However upon close reading it seems quite clear that in 1995 the introduction of a new tax associated with spectrum usage is based on a fundamentally changed perception of what the Radio Amateur service involves as compared with earlier Government attitudes. One has the impression that now the radio amateur service is seen as not so much a national resource but as an accessible group of dilettante hobbyists, readily susceptible to a new form of tax.

If this is a correct perception of the attitude currently motivating the Agency, this can only be seen as rather ironic given the inclusion of at least one of the objectives of the legislation to support organisations with a public service function.

In an economically rational time, it is not surprising that the Government should seek to expand the revenues from what appears to be already a generally profitable area of activity: The use of the radio frequency spectrum. One should scarcely be surprised at such

an attitude, for it has prevailed in Government from the very start of radio in 1895. However, over the intervening years, the technological resource and value to the public of radio amateur activity, has generally been recognised through the maintenance of very low fees as compared with commercial operators and as related to the administrative responsibilities of the Government.

It is noteworthy that, as a result of transfer of responsibility for setting and marking of exams to the Wireless Institute of Australia, even the expense of administering that part of the radio frequency spectrum which is inhabited by radio amateurs, has significantly reduced in recent years.

An inspection of the material contained in the Spectrum Management Agency's year book reveals the range of objectives adopted with regard to the radio frequency spectrum. A significant objective remains that of acknowledging the public benefit of communication endeavours by citizen volunteer organisations and more importantly in providing support of such organisations either by direct subsidy or other less obvious incentive. In this context it is appropriate to recall that the resource provided by radio amateurs involves technical expertise confirmed by examination and the supply of equipment associated with the communication urge is provided entirely at expense and volition of the individual.

THE COMPONENTS OF THE LICENSE FEE PROPOSED

When one looks at the process by which the Spectrum Management Agency have reached the current fee level proposed, it is apparent that there are altogether three components. The first two, roughly speaking, equate with the cost of providing the service that is already given by the Agency. These two components are firstly involved with regulation and management of the spectrum as used by amateurs and secondly, a component to offset the general cost of running of the Agency.

With regard to these two components, it appears that the costs sought to be offset are in reality already significantly exceeded by revenues obtained from license fees. As revealed in a study by the Bureau of Transport and Communications Economics prepared in 1990, in the period 1987-88, the predecessor of the Spectrum Management Agency, the Department of Transport and Communications, incurred costs totalling some $20.4 million and in the same period obtained revenue through licensing of some $44.2 million: Scarcely a "revenue neutral" result one would think. In this context, it appears to us that there is no reason to expect that the trends revealed in the study adverted to will be reversed, even given the effluxion of time between 1988 and the present. This would seem to particularly the case when one considers the extent to which the devolution of administrative procedures to the Wireless Insititute of Australia must have reduced the costs of operating the SMA in that same period.

As compared with earlier arrangements particularly in the post-Second World War period, what appears to be significantly different and new, in the propossed license fee, is the component that has been added, which one could describe quite simply as a tax associated with use of the spectrum.

In this context it is important to draw a distinction between the use of the radio frequency spectrum by commercial operators where profit is the ultimate ambition and that of other users with an entirely non-profit basis. Such users are the public service groups (the Bushfire Brigade, etc.) and radio amateurs. The general motivation of this last group could be described as involving intellectual curiosity on the one hand, and an urge to communicate on the other. It is rather unfortunate that these two issues tend to be coupled together and then dismissed as being merely associated with a hobby. Such motivations, it is contended, remain of vital significance to the national benefit. In this respect, the imposition of a tax on an activity that is erroneously seen as merely involving a self-serving activity, is clearly undesirable. There is an inevitable danger in expanding the present level of fees to the extent proposed, that those who are not firmly committed to the experimental or emergency service aspects of the activity or have the financial resources to support their interest, will simply make use of the Citizen Band service which is no longer subject to a license fee.

In this regard it is considered somewhat ironic that the tax generated by radio amateurs, to be seen as persons with a real public utility in times of emergency, can now be related to the decision to set aside the taxation opportunities generated by an activity which is truly selfish in complexion, the Citizen Band. Not insignificant in this comparison is the extent of total fees available from the CB service and the capacity for significant growth that taxing this service would achieve given the overall numbers of persons susceptible to such a charge.

The Wireless Institute has become aware that in October 1994, the Spectrum Management Agency decided to terminate annual license fees obtained from Citizen Band operators: In this process an annual revenue of nearly $6.5 million was foregone. Indeed, given the estimate that perhaps only half of the CB operators are properly licensed, this revenue may well be closer to $12 million on an annual basis. By contrast the proposed doubling of license fees of Radio Amateurs will produce approximately 5% of the lost revenue with all the attendant disbenefits to Amateurs ignored.

In this general context, it is considered quite significant that currently the CB service is used extensively by commercial operators for the purpose of profit. This is to be contrasted with the position of radio amateurs who operate on a non-profit basis. Further this situation is enshrined in the regulations controlling their activity. Evidently, on this basis there is no opportunity for cost recovery of any charge or tax associated with the use of the

radio frequency spectrum by radio amateurs. Again, given the public service implications of the radio amateur service, this is seen as being quite inequitable.

PUBLIC BENEFIT

Although it has already been conceded that in recent years there has been a diminution in the extent to which radio amateurs involve themselves in primary research associated with the radio frequency spectrum, nevertheless this does not diminish the quality of the intellectual resource provided by radio amateurs as a group. In this regard, it is significant that specific areas of activity by radio amateurs still constitute important "front lines" to the urge for technical change. The facility at Dural in New South Wales represents just such a centre associated with communication technology, which could be seen as important to the longer term future of communication in Australia.

Other activities that spring to mind as relevant are the efforts of the Gladesville amateurs who employ broadcast television on a consistent basis for teaching purposes. In addition, the emergence of computer based message sending as provided by the Packet system are considered of extreme significance to the long term development of the so-called, "Information super- highway". In relation to the educational thrust adverted to earlier, the involvement of radio amateurs on an annual basis with young people involved in the Scouting movement and known as the Jamboree of the Air (JOTA), remains an important means of exposing impressionable young minds to the fascination and excitement of modern communication technology.

INTERNATIONAL ASSOCIATIONS

It is essential in any consideration of licensing fees to recall that Radio Amateurs do not operate in an isolated Australian vacuum. On the contrary, on the basis of long established international treaty, Amateur activity is confined to limited segments of the radio frequency spectrum which match the allocation of Radio Amateurs in most countrys which permit this form of operation. On this basis, the concept of "denial of the radio frequency spectrum to other users" is simply irrelevant. By definition and by international agreement, the Radio Amateur bands are unavailable rather than denied in the sense of precluding the derivation of some form of economic rent as can be the case with a commercial or other form of operator.

While clearly the issue that has prompted this submission is specifically Australian in its complexion, it is appropriate to recall that the amateur radio activity is global in its scope. For this reason, it is possible to examine the operations of radio amateurs in other parts of the World and compare what they are doing with what is proposed for Australia.

We consider it as entirely relevant to note that in the United States, where similar concerns for cost recovery by Government have operated over the years, in the ultimate radio amateurs in that country no longer are burdened with any form of license fee. The clear implication of this situation is that, in the United States, the public benefit available in having a strong resource of technically adept and motivated persons is seen as far outweighing the general cost burden of managing the activities of such a group. In this context it is perhaps relevant to note that, in the main, the management responsibilities of the Federal Communications Commission (FCC), have been transferred to the American Radio Relay League in a comparable fashion to the devolution of the responsibility for examinations as it has occurred in Australia. What does not appear to have been an issue in America is the public benefit of a strong and well supported amateur radio service. By contrast, in Australia the proposed imposition of the new spectrum user tax on amateurs suggests that the activity is seen as purely self-serving and in the same general arena as social golf. It appears that the Americans take a far more enlightened approach to the benefits of having individuals increase their scientific and technical knowledge by self-help and an examination process, than appears to be the case in Australia currently.

PROPOSAL

As outlined in this submission, it is clear enough that over the years radio amateurs have provided an extremely important source of trained and motivated persons useful to the needs of the public community in times of emergency and also in time of war. While it is conceded that technical change has made less pressing some of the advantages of access to such persons as compared perhaps, with the 1940's, nevertheless as demonstrated by recent cataclysmic events such as Cyclone Tracey and the Newcastle earthquake, there remains an important place for individuals to provide independent amateur communication services.

In this respect it is relevant that a substantial number of radio amateurs, numbered in thousands, provide significant communication services to such public organisations as the State Emergency Service and the Bushfire Brigades. This group is identified by the acronym WICEN, which stands for the Wireless Institute Civil Emergency Network. The activities of this group were most notably demonstrated in the recent bushfire emergency in New South Wales and their efforts were universally acknowledged after the event. Beyond that, the significant success of the amateur service communication network as compared with the Government sponsored communication systems, has lead to a radical change of technology in New South Wales in the last six months. This suggests that the Radio Amateur remains an important resource in a practical and theoretical sense in much the same way as was the case 40 and 50 years ago.

Examination of the objectives of the SMA coupled with the most recent proposals for increases to license fees suggests that the salient difference between what is now proposed and what has existed previously, is the imposition of a tax. This proposed tax assumes that the use of the spectrum is entirely a self-serving activity with effectively no public interest benefit as compared with what appears to have been perceived by legislators and motivated them in previous times. It is submitted that the Radio Amateur Service continues to provide facilities and an important public resource at its own expense, based upon education obtained in its own time and at its own volition. Such a service should not have imposed upon it a tax the sole purpose of which is raising additional Government revenue. This is more particularly the case, given the decision to surrender a revenue approximately ten times that currently available from the Radio Amateurs in the form of the licensing fees previously obtained from the Citizens Band Operators.

Given the American example referred to, we consider that there is a very strong argument to support the proposition that there should be no license fee imposed upon Radio Amateurs and the cost of administration should be born by the Public at large.

Dural Report

Here again is another report on activities at the Dural broadcast station.

The Dural Engineering team is looking upwards, with plans for a re-peater on 13cm, and beacons on 13cm, 9cm, 6cm and 3cm; as the saying goes: "Use them or lose them", and any assistance in these areas will be welcome. Also on the burner are a "Spread Spectrum" beacon on UHF and a "coherent CW" (CCW) beacon on HF, to encourage experi-mentation on these modes.

The 23cm repeater has been overhauled, but according to reports on the callbacks there would still appear to be a fault in the antenna system; this will be looked at when a "working bee" has been arranged to inspect all antenna systems here at Dural.

The 2m/70cm repeater controller has been placed back in service following an extended "grease and oil change", but some problems still remain, possibly as a result of the vandalism it suffered last year.

The 2m SSB service will soon be back on air, and should a suitable 6m transceiver become available then this service can also be re-stored.

A transceiver has been obtained which will be put to use as a 10m FM simplex outlet, for which we would like to thank Peter VK2EMU; equipment for a 10m repeater is also being obtained.

Finally, although our half-kilowatt AM transmitters on 160m, 80m and 40m are assured of a steady diet of "810" modulators and finals, their supply of "807" drivers is drying up, so if anyone can supply these, along with bleeder resistors for AWA J54-800 transmitters, then could they please contact the Dural Engineering team.

-- Dave VK2KFU, Dural Engineer

MIR & Shuttle visible passes from Sydney

Robin Gandevia VK2VN tells us that both the Russian Space Station, Mir, and the Space Shuttle Discovery, will be visible (weather permitting) over Sydney in the next few days.

What is specially exciting about this event is that Discovery will be following MIR, in a rehearsal for a docking planned for later this year. The Shuttle and Mir will be separated by between a few hundred metres and eight kilometres.

The passes are from the south west to the north east. In these passes, the spacecraft will fall into the earth's shadow of the sun over a 5 to 10 second period.

The two should be relatively bright, however viewing on Monday is doubtful as the sun will not have set for long. But I have included the times in view of this unique event. When overhead, perhaps listen to 145.550 MHz -- the amateur radio frequency used by both spacecraft.

The following are the UTC times. These should be accurate providing no manoeuvre is carried out in the meantime (that is apparently unlikely, but watch for STS-63 bulletins).

Today Time (UTC) Azimuth Elevation
RISE 10:13 245 2
(Highest) 10:17 310 18
Shadow 10:18:30 340 14

Monday (if visible)
RISE 09:17 235 7
(Highest) 09:21 320 45
Shadow 09:25 030 4

The satellites will probably not be visible until they are at least 10 degrees above the horizon. Allow yourself at least several minutes to adjust to the light, and get your bearings.

The "highest" time given is when the satellites will be at their highest elevation, which is as close as they will get to Randwick in Sydney. The satellites will be orbiting at a height of 400 kms. Elevation can be deceptive -- it is often higher than you think. They should be like bright stars, though brilliance can vary significantly during a pass.

Robin says he's found that those most fascinated to see a "spaceship with men in it" are the totally non-technical, and he suggests you inform your non-amateur friends about it.

Users of Robin's popular Ham Log program are advertised that he will be at the Wyong Field Day on 26th February, and will be distributing free updates to Ham Log's DXCC and prefix databases. Just bring along a disk, and Robin will copy the files for you.

--Robin Gandevia VK2VN

Help wanted

An American Amateur, who has a friend on an exchange student basis, presently in Mullumbimby, would like to contact someone with whom he could arrange a sked for the time this student is in Australia.

Anyone willing to provide this service, could you please call the Division on our toll free number tomorrow, Monday on 1-800-817644, or call the Broadcast Officer, Michael Corbin, VK2PFQ on 02 626 9288.

****

Help needed, please!

Bob Yorston, VK2CAN, is desperately in need of a service manual, for an Icom IC12GE or IC12GAT transceiver. Icom, for various reasons, cannot oblige.

If anyone has access to such a manual, Bob would be quite prepared either to purchase it, or else to cover the cost of photocopying and postage.

Alternatively, rumour has it that there are some places in the United States which handle such things. Can anyone please help with information such as an address?

Bob can be contacted QTHR, or on 02-416-3727.

****

Help available

Remember those Plessey 12A LNCs which were available at the last Trash & Treasure? They will be on sale again at Wyong, $5 each -- personal shoppers only, no limit.

Should you require any technical information, how to pull them apart, circuit diagrams, etc., contact Bob Yorston QTHR or phone 02 416 3727.

****

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we

discuss the February issues of the various magazines.

"Electronics Australia" completes their story on pioneer Archie Caswell; builds a solid-state audio recorder and a simple function generator; completes a stereo TV sound receiver; and plays games with a "4060" binary counter.

"Silicon Chip" builds a six-channel thermometer and an oil-change timer, and continues a series on remote-control receivers.

"Amateur Radio" describes a simple way of constructing PCB circuits; builds a half-watt transmitter from a CMOS octal buffer; shows a simple replacement for lithium backup batteries; continues their series on repeater cavities and the tuning thereof; and presents some circuits for the Curtis 8044ABM CW keyer chip.

"Amateur Radio Action" discusses whether Morse Code has a place in Amateur Radio; builds an Australian-designed packet radio TNC; and continues their series on weather satellites and remote imaging.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

A small company in Princeton, New Jersey, has developed what may turn out to be the "next wave" of hydroelectric innovations. Ocean Power Technologies has produced a piezoelectric polymer sheet which it hopes will be used to generate electricity from ocean waves.

The idea is to anchor the sheets to the ocean floor, attaching the other end to a float on the surface. As the sheet stretches with passing waves, a DC current is generated, through the well-known piezoelectric effect.

The sheets are made of a material called polyvinylidene fluoride (a cousin of PVC); where the system will score over other wave generation systems is that apart from the sheets, there are no moving parts, and nothing to corrode in the sea water.

Eventually, hydropiezoelectricity (or HPE) could be used to generate electricity for the mational grid, for as little as 3 cents per kilowatt-hour. The company (one of whose founders hails from Parth, WA) is currently negotiating with potential partners in Australia, Japan, and Malaysia.

***

"News Briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

--Richard Murnane VK2SKY

WICEN News

The major event this month is the Central Coast Amateur Radio Club Field Day, at Wyong Racecourse, on Sunday 26th February. As usual there will be a WICEN stall next to the Caravan, and people, in uniform, are requested to help staff it for an hour or two from 1000 to about 1500; this is an important "PR" exercise, as we sign up many new members at this event. Please contact Alan VK2YYJ if you can help, during tbe day on (02) 839-1388, or via packet radio at VK2CZR; members will recall that Alan has run several such shows, and we hope he will receive all assistance this year.

Events next month include the "RTA Big NSW Bike Ride" from the 4th to the 11th of March, and the annual Bungonia Cave Rescue on the weekend of 18th-19th March; there will be further information in a later broadcast.

A major event in April is the Oberon Car Rally on 29th April, and about 20 people are required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Central Coast Field Day

The famous CENTRAL COAST FIELD DAY" is now just three weeks away. If you have neer previously been to a Central Coast Field Day, then you don't know what you have missed. The Central Coast Field Day is probably the largest event of its kind in the Southern hemisphere, more than 2,000 people regularly attend.

Apart from the trading of truckloads of new and second hand equip-ment, the Field Day provides for interesting lectures and workshops on topical subjects. At this year's Field Day, there will be lectures on the latest developments in Packet Radio, amateur television, and technical product presentations by amateur equipment manufacturers.

One of the most popular workshops for the past few years has been Lyall Patterson's Microwave experimentation and publicity bout his recent 10 GHz "Moon Bounce" has spread throughout the world. Lyall's Microwave Workshop will be packed out this year, so you better be early for that one.

The 1995 Field Day is being held at Wyong Race Course, a 5 minute walk from Wyong Railway Station. Two entry gates will be in operation this year to avoid the traffic congestion that has occurred in the past. Gates will not open until 8.30 a.m., and this includes entry for Flea Market traders.

Further enquiries concerning the Field day can be directed to the Field Day Committee, Box 252, Gosford, NSW, 2250. Telephone enquiries can be made by phoning (048) 40 2500, or via Packet to VK2AFY @ VK2EHQ.

We hope to see you at the CENTRAL COAST FIELD DAY in three weeks time, on 26th February.

--Bob Fitzgerald, VK2XRF
CCARC Publicity Officer

CLUB NEWS -Chifley ARC-

Do you want to have your own Amateur Radio licence?

The Chifley Amateur Radio Club is conducting classes for the amateur radio licence.

They will cover Morse Code, Theory, and regulations, for the amateur radio licence.

Classes start on Wednesday 8th February 1995.

The classes are on every Wednesday night at 7-30 pm.

The address is:
Good Shepherd School Hall, Hyatts Road, Plumpton.
100 metres south of Jersey Road. Opposite the new shopping centre building (Plumpton Markets).

Postal address:
Chifley Amateur Radio Club
Post Box 280 Mount Druitt 2770

Telephone number: 671-6992 or 637-2226

Once you have your Amateur radio licence, we will then show you how to connect your home computer to your radio and talk to the world using your computer.

Using any one of the many DIGITAL modes is a fascinating way to use your radio and computer.

Come along to our club rooms any Saturday afternoon and have a talk to any of any of our members for more information or come along on Wednesday night 8th Feb at 7-30 pm.

Visitors are always welcome.

Bi-Monthly General Meeting

On 11th February the Chifley Amateur Radio Club will be holding its bi-monthly general meeting, at the club rooms starting at 1-30 pm.

At this meeting the members are able to ask the committee questions on operation of the club. At these meetings the committee ask the members for feedback on various topics in relation to the club.

The Chifley Amateur Radio Club holds meetings EVERY Saturday afternoon from 1-30 pm to 4-00 pm.

These meetings are held for the members and their friends to come along and talk about any amateur radio, computer, related subject, or just to have a cuppa and chat with some friends.

So come along any Saturday afternoon and meet some of the members of the Chifley Amateur Radio Club. You will be welcome.

Classes start on 8th February at 7-30 pm
General meeting on 11th February at 1-30 pm

from the
Chifley Amateur Radio Club Inc.
Publicity Officer: Ray Sparks VK2FKO

CLUB NEWS -AATVC-

Australian Amateur Television Club Inc.

The next meeting of the A.A.T.C. Inc. will be on February 12th 1995 to be held Radio House - Wigram St Parramatta - 1.00 pm.

The meeting will outline the objectives for the Wyong Field Day and input from members is expected regarding the display.

A technical overview will be given about the new CPU controlled repeater about to come on line plus other technical directions.

Anyone interested in ATV is welcome to attend for general information about ATV.

For more information about ATV - contact the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Fridays.

Remember the Wyong Field Day is only 3 weeks away - see us there !!

AATC Inc. Publicity Officer Bob Barnes VJ2R

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Short Wave Listeners ...

Please note that the Divisional Office will be closed this month; however, you can still call us, as the phone has been redirected to a duty Councillor.

SPARC meeting at new club room, North Sydney . . . . . Today
Chifley ARC classes begin. . . . . Wednesday
Chifley ARC general meeting. . . . . .Saturday
AATC meeting at Parramatta . . . . . 12 February
Hunter WICEN meeting (Pauline VK2GTB). . . . . 20 February
Central Coast ARC Field Day at Wyong . . . . . 26 February
Proposed new Amateur Licence fees come into effect . . . 1 March
RTA Big NSW Bike Ride (WICEN). . . . . .4-11 March
Daylight Saving Time ends. . . . . 5 March (check)
Signals Reunion at Wagga Wagga . . . . . 10-11 March
Bungonia Cave Rescue exercise (WICEN-Mark VK2XGK). . 18-19 March
Hunter WICEN meeting (Pauline VK2TGB). . . . . .20 March
Divisional Trash and Treasure Sale . . . . . .28 March
Easter Monday public holiday . . . . . .17 April

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066.Items can also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

I'm afraid you've fallen prey to a commonly held misconception that
you can try out a group in alt, then move it to the Big 7 later.
This actually turns out to be pretty difficult to do effectively.
For a number of reasons it is very difficult to effectively remove
an alt group, so what happens once the rec group is created is that
there are two groups for the topic instead of one, which means that
many people who want to see all the discussions have to subscribe to
both groups, which is very inconvenient and confusing. I would strongly
urge you, if you think you might want to go to a Big 7 group at some
point, that you do so to begin with. If the group cannot pass a vote,
you can still come back to alt to put it.

Hope that helps,

-- M.

1798. VO Hamfest in July.

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 02:29:04 UTC
From: ppiercey@random.nlnet.nf.ca
Message-ID: <3hbulg$9ek@coranto.ucs.mun.ca>
Source record: 252288

The Society of Newfoundland Radio Amateurs will be hosting the 1995
VO Amateur Radio Association Annual General Meeting in conjunction with
HamJam '95, the VO Hamfest.

The hamfest will be held from July 14 to 16 and includes many
informational sessions, a Banquet and BBQ as well as the AGM of the
Provincial Amateur organization. There will also be many other activities
for the non-Amateurs.

For more information and a registration form, please Email the chairman
of the Hamfest, Ken Whalen (VO1ST) at either:

kwhalen@morgan.ucs.mun.ca or

VO1ST @ VO1SIG.#ENF.NF.CAN.NA

Any Amateurs planning a vacation or business trip to NF (or looking for a
new place to explore :)) can add this event to their agendas. It will
prove to be a good time had by all!! You can even visit the SONRA station
located at the site where Marconi received the first trans-Atlantic
wireless signal in 1901.

We look forward to hearing from you.

73 de SONRA

1799. NEW BOOK ON WEATHER MAPS

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 02:50:54 UTC
From: TSTS50A@prodigy.com
Message-ID: <3hbvue$4v96@usenetp1.news.prodigy.com>
Source record: 252284

Does anybody out there receive weather maps via the internet or from the Navy's radiofax? I've been looking at these charts for years without knowing what I'm looking at most of the time, and finally located a new book jthat describes how to read the lines on the various weather charts.

Anyway, the book is called, "WEATHER MAPS - How to Read and Interpret all the Basic Weather Charts". If you get this data also, or plan to, then this book is the "cat's meow."

It costs $29 and their address is: Chaston Scientific, Inc.
P.O. Box 758
Kearney, MO
64060

If you get a copy and are a weather enthusiast also, share your impression of this book with me. I'm thinking of recommending it to amateur radio veterans who volunteer as weather spotters, etc.

1800. 8Q7 Info-Have you been there?

1801. EOSS-22 Balloon Flight Delayed

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 03:52:02 UTC
From: rickvg@usa.net
Message-ID: <22PEISEHGUnH075yn@usa.net>
Source record: 252286

A delay for EOSS-22 has come up. Here is the updated info as well as an expanded rundown on the payload systems.

FLIGHT PROFILE FOR EOSS 22

LAUNCH DATE: March 11, 1994
LAUNCH SITE: Air Force Academy Glider Port
LAUNCH SITE COORDINATES: 38.9666 deg North, 104.81666 deg West
LAUNCH TIME : 15:30 UTC (tentative)
EXPECTED TRACK: Between 35 degrees and 145 degrees azimuth
FLIGHT EXPERIMENT: Atmospheric Sampling of Inversion Layer
SECONDARY EXPERIMENT: Ozone sampling throughout the flight.
PROJECT INTEGRATOR: University of Colorado at Colorado Springs,
Jack Crabtree AA0P

Shuttle II FREQUENCIES:

Telemetry:
144.340 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.
Beacon:
147.555 MHz FM (250 milliWatt output) - Continuous CW ID
ATV:
426.250 MHz AM (1 Watt output) - Color NTSC video
10 Meter Beacon:
28.322 MHz USB (500 milliWatt output) - Continuous CW ID

Foxhunters:

Pikes Peak FM Association Repeaters 449.450 MHz (tentative)

PURPOSE OF THE FLIGHT:

Launch is scheduled for 15:00 UTC at the United States Air Force Academy's Glider Port.

Two experiments will be flown.

1.) A gas capture experiment to sample air below and above the thermal inversion that regularly resides above Colorado Springs. These samples will be obtained by using computer controlled, evacuated canisters. These canisters will be recovered and the gasses they capture will be analyzed for

their constituents.

2.) Ozone will constantly be monitored throughout the flight. This information will be transmitted to the ground via telemetry channels in the EOSS "Shuttle II" where they will be captured on computer for later analysis.

notes:

Automatic Position Reporting System (APRS):

EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file. The Shuttle is not a TNC equipped packet station. It only reads data from various sensors and experiments and formats and transmits that data in AX.25. Therefore, beacons from other APRS stations will NOT be retransmitted (digi). So, inorder to minimize possible interference with hams in your area, we request you turn off the position beacons in APRS. Thanks!

ATV:

The Amateur Video Signals from the payload may be picked up by a cable ready TV set on channel 58. However, you need to be very close to the balloon, and have a directional antenna to do this as cable receivers do not have much sensitivity (why should they?). If you don't have a cable ready set, try tuning DOWN from UHF channel 14. Some sets can receive the signal there too.

Who Can Hear It:

Almost all our transmitters are on VHF or above frequencies. Therefore, you need to be line of site to the payload to hear/see it. Since the payload rises to an altitude of over 90,000 feet on most missions, reception is usually possible for folks in most of Kansas, most of Nebraska, most of Wyoming, extreme south eastern Idaho, eastern Utah, north eastern Arizona, most of New Mexico, northern Texas, and western Oklahoma. DO NOT BE DISCOURAGED by the apparent low power of our signals. I usually monitor the 147.555 Beacon with an HT from the ground station throughout the flight. The signal is strong even at 130 miles and I only lose it when the balloon descends below my horizon. We have a 10 meter beacon under construction. This beacon should be flying with us from now on. Depending on conditions, this signal may be heard just about anywhere world wide. However, it's most likely to be heard one or two skips away limiting it's reception to the USA, Canada, and Mexico. But, it can't hurt to try and copy it.

1808. <ad> GUARANTEED CREDIT REPAIR BY LAW FIRM

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 10:47:14 UTC
From: ccapc@cyber.sell.com
Message-ID: <3hcrri$o7p@panix.com>
Source record: 252298

Consumer Credit Advocates, PC
11 Pennsylvania Plaza, Suite 2101
New York, NY 10001
(212) 629-5261 (telephone) (212) 629-4762 (fax)
E-MAIL: ccapc@cyber.sell.com

Our LAW FIRM offers direct guaranteed effective credit restoration services by experienced attorneys. THIS IS NOT A DO-IT-YOURSELF KIT.

What can we do?

We have successfully facilitated the removal of Late Payments, Charge-offs, Foreclosures, Repossessions, Collection Accounts, Loan Defaults, Tax Liens, Judgments and Bankruptcies from our clients' credit reports. WE GUARANTEE THAT YOUR CREDIT CAN BE RESTORED!!!

Who needs our services?

Anyone who has experienced the inconvenience and embarrassment of being turned down for a credit card, a lease or a purchase of an automobile.

Anyone who is unable to buy the house of their dreams due to denial of a mortgage application or who has to pay thousands of dollars more in mortgage interest than someone with good credit.

Anyone who has been turned down for a job or promotion due to derogatory credit items on a credit report.

Anyone in business who has lost a deal because a person or firm wanted to see his/her credit report before doing business.

Anyone who has been unable to establish credit.

THE FOUR GREAT MYTHS OF CREDIT:

Myth #1: It is illegal or immoral to have your credit report cleared.

Fact: It is not illegal nor immoral. In fact, that is what the Fair Credit Reporting Act is all about. The act was enacted by Congress in 1971. One of its purposes as to give consumers the protection of the law and to help guard against

any unwarranted invasion of a consumer's right to privacy.

Myth #2: The information on a credit report cannot be changed.

Fact: Actually, the opposite is true under the Fair Credit Reporting Act. Federal and State laws require that items be removed if they are not 100% accurate or cannot be verified in a timely manner.

Myth #3: It is impossible to get a bankruptcy off a credit report.

Fact: Bankruptcies can come off credit reports like any other derogatory item. The nature of the derogatory item has nothing to do with its removal under the Fair Credit Reporting Act.

Myth #4: Credit Reporting Agencies are empowered with some kind of governmental authority.

Fact: Absolutely Not!! They are simply large corporations whose primary goal is to make a profit like any other business.

If you have ever applied for or received credit, a file exists in one or more of the credit bureaus. These companies collect, store and distribute as much credit information as they can find, retaining negative information on a credit report for 7 to 10 years. This information is evaluated by potential creditors to determine your credit worthiness.

Credit reporting agencies are in business to protect the interests of the creditors. the LAW FIRM's goal is to help and protect the individual consumer from inaccurate credit reporting.

The president of our LAW FIRM has been practicing consumer law since 1984. The staff of our firm has successfully processed, disputed and challenged thousands of client credit reports.

Our legal fee is based o the number of negative items that appear on a client's credit reports, issued b the three national credit bureaus. Our retainer agreement offers a MONEY BACK GUARANTEE stating that if any negative item is not deleted, upgraded or corrected from a client's credit file, it will give the client a full refund for that item or continue to process the client's file at no additional fee until that item is

corrected, upgraded or deleted. THE ONLY THING YOU HAVE TO LOSE IS YOUR BAD CREDIT!!

PLEASE CONTACT THE LAW FIRM AND LEAVE YOUR FULL NAME, MAILING ADDRESS AND TELEPHONE NUMBER SO WE MAY FORWARD FURTHER INFORMATION AND INSTRUCTIONS TO YOU ABOUT OUR SERVICE.

HA>
HA> > I believe Baycom and Windows can't run at the same time.
HA>
HA> I guess this just about clinches it for a Kantronics... ;-)

BAYCOM will definitely not run in an multitasking environment such as MS WINDOWS, DV, etc...

The reason is simple: BAYCOM monitors hardware lines of serial port which

takes much processor time even for 1200 bps half duplex and multitasking "blackouts" is usually long enough for Baycom to loose some bits in frame.

Transmisions will also be garbaged and will make a QRM on Packet Net ferq.

The same thing is for TFPCX, it will also refuse to fire up in MS WIN

DOS window.

16550 doesn't help here: AX.25 frames are handled by program, not serial port. In fact, with some programs you can use any available I/O port for connecting BAYCOM modem.

If somebody plans to run packet from an multitasking environment, he/she must also plan to buy or make an TNC-2 or any other appropriate AX.25 controller which will handle protocol layer.

Maestro.

1812. MFJ DSP Filter

Jeff Angus writes:

JDA> Go f**k yourself.

That is not possible Jeff. Are you attempting some Junior High
kind of insult here? Tsk tsk. I guess so. I feel sorry for you.

JDA> Call the sysadmin at grendel.com and get the same answe

Your messages are deliberately offensive. The FBI and FCC are interested
in your types of messages. Believe it or not, your 4 letter word
is still a Federal Offense over public common carriers like Internet
and BBSes that any one of any age may call and read.

JDA> This is usenet, not "Nick at Night".

Very clever argument, but it will not wash in Federal Court where you
will likely wind up if you persist in this obnoxious, desperate
behavior.

JDA> Jeff Herman is a raving Homophobic

I don't care for your infantile name-calling against other users of this
conference. WHy don't you just SHUT UP and GO AWAY Jeff!

JDA> adjustment periodically. Since I have argued with him in the past, some
JDA> how or another, you seem to think I'm some sort of raving pervert and/or
JDA> homosexual.

I said nothing of the kind. I merely asked you to refrain from using the
unnecessary offensive words.

JDA> You don't like my postings? Put me in your kill file instead of trying to
JDA> tell me and others what to do.

He he! I can WELL say the same to you!
I can read them if I wish. You don't have to deliberately be so
provocative and annoying to the other users. If you don't like my
responses to your filth, don't read them. Simple enough, right?

JDA> Take some personal responsibility for your
JDA> own life.

Oh yeah, like *I* am the irresponsible one here. Right!

JDA> In case you missed it, "Go f**k yourself".

Yeah, I missed it! Cute Jeff. OUCH OUCH! That really HURT me!
Oh Jeffy, PLEASE PLEASE PLEASE don't tell me that AGAIN!!!!!!!

From: jimkd0av@aol.com
Message-ID: <3hd5tu$1aa@newsbf02.news.aol.com>
Source record: 252314

The general thought is that electrons flow from negative to positive and
the "current" flow in the opposite direction.

>>Is it a hassle, expensive, etc.?

I haven't tried it as I didn't have enough time before this trip. I talked
to the ARRL and they said you had to send an application by mail and it
takes 4 to 6 weeks to get your permit back. Since it was only 1 week before
I left (and you can't get the permit here in France) I gave up. I am in
Paris for 4 weeks but can't operate, oh well.

Gary P. Fiber (gfiber@halcyon.com) wrote:

: It appears not to have come out the way I ment it to. I always
: place a 60 amp fuse right at the attach point to the battery of the
: radio positive lead.

From personal experience, it is possible to develop a short circuit from the positive lead to chassis ground *before* the radio fuse. I can imagine that some shorts might not draw as much as 60 amps. In that case, the wire might have to carry more current than it is capable of handling. This would create a potential fire hazard. Perhaps a fuse rated 10 amps higher than the radio fuse would be a safer alternative.

Although it is almost certain that a 60-amp fuse in the negative lead would blow if the battery-to-engine-block wire opened, I would use a fuse rated 10 amps higher there, too. The 5 amps margin would ensure that the *radio* fuse, not the wiring fuses, would open if excessive current were being drawn by the radio.

73 from ARRL HQ, Ed

I also
: leave the regular radio fuses intact. So the positive lead itself is fused with a
: 60 amp fuse in the event it gets grounded to the vehicle body. Most
: automobile batteries can supply up to 400 amps of current at any time.
: This can weld two pieces of metal together or start a nice fire in the auto.
: The radio is still fused by the correct size of fuse the manufacturer requires.

1823. Re: Gin Pole, how to use?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 14:45:28 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1995Feb9.144528.23228@ke4zv.atl.ga.us>
Source record: 252228

In article <3hat5t$rpa@on-ramp.ior.com> bobr@on-ramp.ior.com (Robert J. Raymond) writes:
>Can anyone give me some details on what a gin pole is and how it is used?
>I understand this can be used to help me put up my tower? Thanks.

A gin pole is a portable lifting fixture used to lift heavy objects.
The traditional gin pole is a guyed pole with a block and tackle
attached to the top. For tower use, the guys are dispensed with and
the pole is clamped to a standing tower section. The upper part of
the pole extends above the standing tower and the block and tackle
are used to hoist the next tower section up into place. The pole is
then moved up the tower and used to erect the next section, and so
on, until the tower is completed.

This operation can be dangerous, since heavy objects, and stressed
lines, are above, or next to, people on the tower and on the ground.
Experienced help is important to avoid accidents.

Gary

GC>The right hand rule is a *consequence* of "conventional current"
GC>theory. It does not prove it.

Gary, I believe in the "smoke theory."
Electronics doesn't work on "electron flow" nor does it work
on "conventional current" but rather it works on smoke.
I have proved this, because every time the smoke escapes out of the
components, the equipment quits working!

SB QST @ ARL $ARLB013
ARLB013 Changes to 902-MHz band

ZCZC AG79
QST de W1AW
ARRL Bulletin 13 ARLB013
From ARRL Headquarters
Newington CT February 9, 1995
To all radio amateurs

SB QST ARL ARLB013
ARLB013 Changes to 902-MHz band

The FCC has adopted rules for the future licensing and continued development of a number of services, including Amateur Radio, in the 902 to 928 MHz band. The new rules set standards for what had previously been called automatic vehicle monitoring (AVM) systems but which the Commission now refers to as the Location and Monitoring Service (LMS).

Amateurs will continue to have access to 902 to 928 MHz, on a secondary basis, to the new LMS systems; to industrial, scientific, and medical (ISM) systems; and to government users. Unlicensed low power ''Part 15'' users are on a secondary basis to all the above, including amateurs.

The FCC said it would adopt a plan to afford both amateurs and Part 15 users ''a greater degree of protection to their operations'' (from interference from other services). It also said it would clarify what constitutes harmful interference to LMS licensees by Part 15 devices and by amateurs. ''Operational restrictions should be imposed to maintain the coexistence of the many varied users of the band,'' the Commission said.

The FCC also said it would use a ''negative definition'' to clearly establish the parameters under which amateurs and Part 15 users may operate without risk of being considered sources of interference to services with a higher allocation status.

In a petition in January 1994 the ARRL requested primary allocations for amateurs at 902 to 904 and 912 to 918 MHz. The FCC accepted this petition as comments in its AVM proceeding but denied it, saying that insufficient ''quantitative support'' for the petition had been shown. More information was in March 1994 QST, page 94. (FCC report and order in PR Docket 93-61).

I'm currently practicing for a code exam and am looking for
some practice text. I'm aware I can use any text file
but what I'd really like is something with pro-signs and
punctuation limited to the character set of SuperMorse.
I've used the QSO feature of SuperMorse but am starting to
memorize the text of the QSOs. I find that once I get
bored with code practice, progress is slow.

The fallback is to simply take any text file and make the
necessary changes. Before I do resort to this, does
anyone have what I'm looking for?

Yes, I have a Radio Shack adjustable 0-20db TV amp up in my attic where the TV antenna is. 1/2 watt with a rubber duck in the house will obliterate any channel that is being watched. HF also affects this thing. Almost makes me want to get cable so the kids & XYL don't complain.....

BTW, 440 does not seem to bother the amp, even though they say it covers 50-500 mhz.

1831. GB2RS News 12th February 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 17:25:05 UTC
From: dave@llondel.demon.co.uk
Message-ID: <792375905snx@llondel.demon.co.uk>
Source record: 252236
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 12th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Next weekend sees the major event in the VHF calendar - the RSGB VHF Convention. The convention takes place on Sunday, the 19th, at its usual venue, Sandown Exhibition Centre, near Esher in Surrey. Featured are trade stands, a full lecture programme on VHF, UHF and Microwave subjects, specialist groups, Morse tests, trophy presentations and an RSGB book and information stand. Doors open at 10.30 am. Refreshments will be available and there is ample car parking. Talk-in will be by GB2VHF on channels S22 and SU22. Full details of the lecture programme and a map can be found in the February edition of Radio Communication, or can be obtained by calling RSGB Headquarters on 01707 659015.

Also next weekend, the 18th and 19th, is Thinking Day on the Air when Guides throughout the world are able to communicate using amateur radio. Well over two hundred UK stations will be operational using the GB prefix, as well as many using the special club prefixes.

Next Saturday, the 18th, RSGB Headquarters at Potters Bar will be open to visitors. This is not a formal open day so there will be no guided tours, but the shack, museum, library and bookshop will be available between 10 am and 4 pm.

The RSGB, which carries out Morse testing on behalf of the Radiocommunications Agency, has vacancies for Morse Examiners in the following counties: Bedfordshire, Cumbria, Greater London (South), Greater Manchester, Gwynedd, Lincolnshire and Surrey. RA requirements are that prospective examiners demonstrate their ability to receive at 20 WPM and send a typical test passage on a manual key. In addition, the Society is looking for people with the personality to deal with candidates in a professional manner, and the ability to work as part of a county team. Applicants should contact the Chief Morse Examiner, Roy Clayton, G4SSH, at 9 Green Island, Irton, Scarborough, North Yorkshire YO12 4RN, telephone number 01723 862924. Interviews will be arranged at radio rallies throughout the UK, starting with the RSGB London Amateur Radio and Computer Show.

Packet repeater GB7YM-7, also known as RHB85, has closed down permanently. It operated on the 430MHz band from Whitby, and has closed as part of the re-organisation of the network in the region.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Guam, AA5K will sign stroke KH2 from next Tuesday the 14th for two days, operating on all bands and all modes running barefoot to dipoles. He will then move to the Northern Marianas, and sign stroke AH0 until the 20th.

From the Congo, a group of Germans are currently very active on most bands as TN4U and TN2M and are reported to be operational until the end of February.

And from Montserrat (VP2M), WA2UJH will be active from next Thursday, the 16th, until the 26th. He will operate mainly on CW on 40, 80 and 160 metres, plus the WARC bands.

Next the Rally News, and we know of two rallies for today Sunday, the 12th:

The Cambridge and District Amateur Radio Club Rally takes place at the Addenbrookes Ambulance Station, Cambridge. Doors open at 10 am. The event features trade stands, a car boot sale and a bring and buy stall. Refreshments are available.

And the Northern Cross Rally will be at Rodillian School on the A61 between Leeds and Wakefield, near the junction of the M1 and the M62. The event includes dealers, a bring and buy stall and refreshments. Doors open at 11 am, or 10.30 for disabled visitors and for the bring and buy. RSGB Morse Tests are available on demand and talk-in is on the 2m and 70cm bands.

Later this month the Tyneside Amateur Radio Society Rally takes place in South Shields on Saturday, the 25th. In last week's bulletin we inadvertently said this was a Sunday. The rally is definitely on Saturday, the 25th. Further information can be obtained from Jack, G0DZG, on 0191 265 1718.

And a date for your diary:

The RSGB National Mobile Rally is being held as usual at Woburn Abbey in Bedfordshire. The date is Sunday the 6th of August and details can be obtained from Norman Miller, G3MVV, on 01277 225563.

Now for the HF contest news:

Next weekend, the 18th and 19th, the ARRL DX CW Contest takes place on all HF bands, excluding the WARC bands. The times are 0001 on the Saturday to 2359 on the Sunday. Contact only USA and Canadian stations and send RST followed by your power.

Next some VHF contest news:

Today, Sunday the 12th, sees another event in the 70MHz Cumulative Contest which takes place between 1000 and 1200 UTC. The rules can be found in the January RadCom.

The RSGB VHF Contests Committee has received several requests for the inclusion of a 6 metre section in VHF National field Day. The committee

is willing to consider this if there is sufficient support from the membership, but only as an alternative to 4 metres, not as an addition. Changes could be made in time for the 1995 event if RSGB members express their views in writing before the end of February. Write to the Chairman, David Johnson, G4DHF, whose address is correct in the RSGB Call Book. Members opinions will also be sought at the RSGB VHF Convention.

A special event station active this week is GB500AU, celebrating the 500th anniversary of the founding of Aberdeen University in 1495. It is operational until Thursday, the 16th on 80, 40, 20 and 15 metres SSB, SSTV and CW, and on two metres FM and SSB.

And now the solar factual data:

The period from the 30th of January to the 5th of February saw solar activity at moderate levels with numerous flares reported every day. Geomagnetic activity was mostly unsettled to active for most of the period. The sunspot indices increased every day, from 43 on the 30th to 85 on the 5th, with the mean for the period at 64. Solar flux levels hovered around 87 units from the 30th to the 2nd, but then declined to 81 units by the 5th. Solar flares were reported every day along with radio noise storms. On the 1st of February the sun had two sunspot groups that were flare productive. The first of these, region number 7834, produced a C7.7/1N. The second, region number 7832, produced two M1 class flares. All three flares occurred within one hour of each other. The 3rd of February saw the largest flare of the period which was a M4.3/2B. The electron fluence increased everyday and finished the period at a very high level. The x-ray flux level increased every day until the 1st and peaked at B4.4 units. It then declined to A7.8 units by the 4th. The average for the period was B1.1 units. The 90 day solar flux average on the 5th of February was 82 units.

Geomagnetic levels were mostly active. Levels on the 30th were up to Ap 30 units. Only the 1st and the 5th were quiet days with an Ap index of 9 and 6 units respectively. The average for the period was Ap 18 units. The state as been 'mag alert' for most of the period. The aa indices, as reported by the British Geological survey for the period from the 24th to the 30th of January, was mostly very quiet with levels down to 7.3 nanoTeslas on the 27th and the 28th. The 29th also started quiet but levels increased late in the day to storm conditions, with 136 nanoTeslas, K6, being reported. The levels remained high on the 30th with the daily figure at 56.8 nanoTeslas.

I'll repeat the figures: Spots - 64, Flux - 85, Ap index - 18, x-ray flux - B1.1.

Unfortunately we have not received any ionospheric data at all from Meudon this week. The RSGB Propagation Studies Committee is investigating the problem and hope to have the service back to normal as soon as possible.

And lastly the solar forecast.

At first the quieter side of the sun is expected to be looking our way, but from the middle of the week solar activity may increase. Solar flux levels are expected to increase to the high 80s by next weekend, with possible solar flare activity. Geomagnetic levels are expected to be active over the next few days due to a recurring coronal hole. Levels are then expected to decline after the middle of the week. Ionospheric MUFs for the south are expected to reach 20MHz, and for the north 17MHz. Levels may be lower than this in the first half of the week due to the expected high geomagnetic activity. Darkness hour lows are expected to be about 8MHz with the possibility of spread F on some early mornings.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Sierra and G7 Uniform Kilo series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Sierra series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

1832. Re: current flow

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 17:31:06 UTC
From: gordon@westford.ccur.com
Message-ID: <D3qtzw.C7H@westford.ccur.com>
Source record: 252232

There are simple definitions that should help this confusion. In physics,
the current flow from a single particle is defined as the charge times the
velocity of the particle.

j = q * v

Since the electron has negative charge, the current vector points in the
opposite direction as the velocity vector when electrons are being discussed.
In an ionized plasma, there is also a positive ion current. The current
flows the same direction even if the carriers flow in opposite directions.

I think it was Ben Franklin, (but I don't have a reference handy), who
defined positive and negative from his experiments with static electricity.
Blame him for choosing positive for the more massive particle, but then
again, at that time none of this was clear.

I have a Standard 5718 and it is just great! Excellent intermod
protection and wired for 9600 baud packet out of the box.

: Stupid question. I don't have a copy of the rulebook handy.

: Does the United States have a reciprical (sic) operating agreement
: with Japan??

Yes ..... but it is not exactly "reciprocal". The JAs and anybody else with whom the US Dept of State has negotiated an agreement can come here to the USA ... send in a simple one page application hand receive permission to operate for one year ... at no charge. The form they use is the FCC Form 610A ... called an "Application of Alien Amateur Radio Licensee for Permit to Operate in the United States".

Foreigners of any nationality who hold a valid license issued by the USA, France, Germany, Australia, South Korea, or Canada (but need NOT be a citizen of those countries) can apply for a Japanese ham license of roughly equivalent privileges .... also valid for one year. The "catch" is the initial application fee can be up to $135 or so. For the casual visitor to Japan .... this is NOT such a good deal. The yearly renewal fee is around $30-35 or so .....unless you happen to have a permanent resident visa in which case you only have to renew your station license every five years.

Actually, there are other names for it like: heat, red, orange, yellow,
green, blue, purple (I never say 'violet', that's a flower), UV, X-ray,
and gamma. Anyone have the frequency limits of these terms? :)

By the way, is IR transmission possible over the few km range for things
like repeater links? If astronomers can pick up faint IR sources billions
of light-years away, I woulkd think that atmospheric absorbption is not
a problem. Then again, I may just be out to lunch.

> (the re-issued callsigns, I mean - not the, umm, "expediency").

The same here in the UK. In fact that's the ONLY way to get a 2-letter call in this country .... inherit one from a deceased relative! I think it's very unfair, IMHO. An incentive scheme, like the original USA arrangement before they started tinkering with it, would be much better.

But at present we only have 4 grades of license in the UK: Novice/no-code, Novice/with-code, Class B (VHF only/no-code), and Class A (Full privileges/with-code). The only difference in qualifications between Class A and Class B is the 12 wpm Morse Test .... not much scope for incentives, guys!

By the way, you CAN buy "vanity number plates" in the UK, but you CAN'T buy a "vanity call-sign"! Also by the way ... we are shortly going to start having "M" callsign prefixes in the UK, as we have almost come to the end of the "G" three-letter series. (Did any of you catch M0RSE, which was specially issued to celebrate the Samuel Morse centenary?)

> What is a gin pole used for and how does one use it?

It is a pole used to temporarily support an antenna mast whilst it
is being hauled up into the vertical position. Basically, it is
intended to prevent the mast from bending/buckling whilst it is
half-way between the horizontal and vertical positions.

I can't explain it any better than that without a diagram, but hope
this helps!

I took my Kenwood TH78E to France on holiday last year. The main reason
for taking it was to run packet (with a PK232 and Psion Series 3a). The
packet worked fine. I did also use it for phone whenever the opportunity
permitted.

I had QSO's none. Neither S20 (calling channel) nor repeaters
brought anything. I could (and did) call CQ until blue in the
face but no QSO's resulted. I had the distinct impression
that as I had no French language they either could not;
or did not want to; talk to me.

If you have no conversational French; and getting a license
is a hassle I'm not sure I would bother.

As to licensing, why not get the FCC to find some means of
joining CEPT ? With CEPT I can operate in France and Spain
(and most of the rest of Europe)
simply by adding the relevant prefix to my UK call.
No paperwork needed beyond my UK license.

: There doesn't seem to be a 'standard' for paddle wiring. Some folks
: have dits on the thumb, some want dahs there.

The standard is to wire the paddle to send dits with the thumb and dahs with the finger. So for a right-handed person dits are the left paddle and dahs are the right. For a lefty, it is reversed.

Occasionally you will find a left-hander who does it the other way around so he can use a right-handed friend's keyer without rewiring the paddle, but it's rare.

My initial gut reaction is that you bought the radio used...and someone
modified it to be a glorified C.B., complete with "talkback". This is
usually a self-destructive modification that stresses out the audio
amplifier until it burns out. I could be wrong, I've been wrong
before...

> unknown Marine; Khe Sahn, Viet Nam

Long ago I took my tech test and the code required. I accidentally allowed my license to lapse. In two days I will take the no code tech test and reinstate my license. I can not recall ever having a CW conversation before and don't forsee it in the future. If not relearning my code is a problem for some people then it is their personal problem. My choice to not use CW is my own. I respect people who enjoy CW for it is almost an art form.

What I don't understand is why anyone would relate a no code tech license with a lesser quality person. Given a novice or an extra class which is more likly to be a murderer? To put things in respect, a license class denotes skill level tested at successfully. It does not make a statement about one's personality, education, morals, or capability. I may make extra some day if I choose to pursue it. If someone looks down at me because of my "no code" status then that is their choice. I'm sure that for the most part amateurs of all classes truly are not that shallow and those who are, will be few. This is represented by the fact that one opinion had so many rebuttals and no support posted. I look forward to being on the bands soon and "talking" to some old friends and a few new ones.

ZCZC AE82
QST de W1AW
DX Bulletin 7 ARLD007
From ARRL Headquarters
Newington CT February 9, 1995
To all radio amateurs

SB DX ARL ARLD007
ARLD007 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, John, W7KCN, Frank, AH0W/OH2LVG, Akio, JA3JM, George, N6ZS, Stu, K8SJ, and the Contest Corral column from the pages of QST magazine. Thanks to all.

CONGO. A German team is active as TN4U on CW and TN2M on SSB, and should remain so until the end of the month. QSL via DL7VRO.

THE GAMBIA. Paul, VE3JLP, will be in this country from February 10 to 17 to visit his daughter. He has applied for a temporary license and will try to operate the HF station at the agricultural college. QSL via VE3JLP.

SUDAN. John, W7KCN, is now in receipt of ST2/G4OJW logs and should be receiving QSL cards within a few days. QSL with SASE via his CBA.

MARIANAS ISLANDS. Frank, AH0W/OH2LVG, will be on the air from Saipan in the Northern Marianas in early March. This will include action in the ARRL DX SSB weekend as AH0W. QSL via KE7LZ. This trip will include a few days in East Malaysia, where he hopes to operate as well.

NORTH PACIFIC DX VACATION. Akio, JA3JM, aka AA5K, hopes to be on the air from Guam February 14, 15 and 16 as AA5K/AH2. From there it's on to Saipan in the Northern Mariana Islands as AA5K/AH0 from February 16 to 20. Akio plans to operate 160 through 10 meters with CW, RTTY and SSB, as well as OSCARs 10 and 13, and RS 12. QSL via JA3JM.

DOMINICA. Lou, WA6SBS, and George, N6ZS, will operate from February 16 to 24, including the ARRL CW DX Contest. Outside contest hours they will be on CW, SSB and RTTY. The call J75A has been requested.

QSL via N6ZS.

SAINT VINCENT. Stu, K8SJ, will be running an all CW operation from February 10 to 23, with full-time participation in the ARRL CW DX Contest. QSL via K8SJ.

MONTSERRAT. Members of the Woodbridge Wireless group of Virginia will operate the ARRL SSB DX contest March 4 and 5 as VP2MFM. Before and after the contest they will be on CW, RTTY and some 6 meter work. QSL via WD4KXB.

BAHAMAS. Larry, K3TLX, will operate from February 12 to 21, including the ARRL CW DX Contest. The week before the contest he will operate all HF bands. QSL via K3TLX.

WAZ ZONE 6. OH2NSM and OH3JF will be active from Cancun, Yucatan, to provide WAZ hunters with Zone 6 credit. Their stay is expected to be from February 10 to 20. Check 7 kHz up from the band edge for CW on 160, 80, 40 and 30 meters. OH2NSM and OH3JF are not experienced DXpedition ops, so PLEASE be patient.

THIS WEEKEND ON THE RADIO. The Florida QSO Party, North American Sprint on CW, PACC Contest and YL-OM Contest phone are part of your on the air operating menu for the weekend. Details on the YL-OM Contest appear on page 128 in January QST. Info on all other events is on page 105 of February QST.

1850. MFJ1278 es Multicom

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-09 21:02:27 UTC
From: russelltj@aol.com
Message-ID: <3hdvt3$5rj@newsbf02.news.aol.com>
Source record: 252244

I have a MFJ 1278 and Multicom software which I purchased. I've uploaded my Multicom twice and now , because there's a "protect" put on it by MFJ that prevents more than two installations, I can't use it anymore. Mfj says send it to them and they'll make me a poersonalized copy!
I think this stinks, Anyway, my question has anyone got around this?

Maybe the solution is using a different software. MFJ truly stands for Mighty Fine Junk.

Thanks es 73's Russ (NZ2D)

After you are compfortal with the keyer start adding one charecter at a time.
CQ is my first choice. Go slow an try not to pick up bad habits. My main
problem is running letters to geather. This makes it tough on the guy on the
other end. The main way I combat it is to set the QSK delay where it drops
out after the correct letter space.

It's odd but it seems that someone that is really good with bug is easier
to copy than a electronic keyer.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 FEBRUARY AND FORECAST FOR 10 FEBRUARY - 12 FEBRUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 08 Feb
Daily Proton Fluence >1 MeV: 3.7E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.0E+07 (normal)
X-ray background: B1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Feb 11 Feb 12 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Feb: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 08 Feb
Learmonth 7 2331 1112
Fredericksburg 4 19
Planetary 7 29

Observed Kp for 08 Feb: 4555 5322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Feb 8 Quiet to unsettled
11 Feb 8 Quiet to unsettled
12 Feb 15 Possible active periods late in the day, otherwise
quiet to unsettled.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
09 Feb fair fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Feb fair-normal fair-normal fair-normal
11 Feb normal normal normal
12 Feb normal normal fair-normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
09 Feb -9 Near predicted monthly values with 20-50% depressions
from 10-12UT. Sporadic E was observed from 01-05, 07
and 17-21UT.

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
10 Feb 20 Near predicted monthly values
11 Feb 20 Near predicted monthly values
12 Feb 20 Near predicted monthly values
COMMENT: Townsville frequencies were near predicted monthly values
with 20-50% enhancements 10 and 15-20UT. Sporadic E obscured the F
layer 01-03, 05, 11 and 21 UT. Hobart frequencies were near predicted
with 30% depression 11-18UT. Spread F and sporadic E were observed
10-15UT. Sporadic E may be present again today.

>So its OPERATING CW not passing a CW test that ensures
>gentlemanly behavior.

That's correct, John. The contention is that almost anyone can learn
code so the code test is not a filter. But a random listen to the
CW subbands will show an overwhelming number of polite ops.

>Personally I have never been able to correlate on the air
>behavior with the class of license.

How true. Listening to the CW ops I can't tell the
extras from the generals; and in the novice CW subbands
one can't tell the novice from the extra (ignoring the sending).

1858. <<< R.A.D.I.O. Tower Court Case - HELP >>>

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-10 00:56:03 UTC
From: hmn@i-2000.com
Message-ID: <3hedj3$h83@i-2000.com>
Source record: 252257

For those of you who have not had the opprotunity to follow the articles in QST, World Radio, Newline and
hundreds of Amateur Radio club newsletters around the country, the following information is something
you will not want to pass by.

About two years ago, Mark Nadel, NK2T ran into difficulty with the Town of Hempstead, NY and his right to
maintain his 55 foot radio tower. The tower which was installed with a permit back in 1984 came under
attack by a neighbor who complained of RFI. Well after 2 hearings with the Zoning Board and a case
brought before the NY State Supreme Court we are now faced with a major finacial burden. At this
moment, the Town of Hempstead should come up with a decsion within the next 30 to 60 days. Inside
sources feel that area varience will be approved.

As we stated the legal costs are incredible; as of 2/6/95 the legal fees are in excess of $24,500. About
$15,000 has been raised by many generous amateur radio operators arround the country. However we
STILL NEED more. In an effort to stimulate donations, we have organized a drawing for your choice of
Kenwoods TS-50S or the TM-942A. For every donattion of $20.00 you will get a ticket which enetrs you in
this drawing. ONLY 250 tickets will be sold, so the odds are pretty good. (Better than your state lottery)

If you would like to help out, and we sure hope you will please send all donations to:

R.A.D.I.O. inc.
Box 343
Williston Park, New York 11596

ATT: Drawing Tickets

If you would like to keep up to date with this case please call the R.A.D.I.O. information line at 516-735-2500
24 hrs/day.

Again PLEASE be generous, Without your help we can not win.

73's
R.A.D.I.O.

From: kim@nntp.cadence.com
Message-ID: <D3rEzs.4Hq@Cadence.COM>
Source record: 252258

Async User (aecaslin@news.epix.net) wrote:
: I think that you HAM's have an interesting hobby going here. I'm
: a middle age guy who could use a little divergence and wonder if amateur
: radio could fit the bill. I'd like to learn more about how one gets
: started. Is there anything on Internet which gives a good overview of
: what licenses are needed and what type of equipment I should be looking
: for? I will appreciate your comments, advice and/or direction. Thanks.

There is LOTS of information on the Internet. If you have Mosaic or
Netscape, a good URL to start with is:

http://www.acs.ncsu.edu/HamRadio

One of the best ftp sites is:

ftp.cs.buffalo.edu

Also, don't ignore the hardcopy possibilities; most electronics stores
carry a large assortment of books for Hams, from the getting started
variety to fairly advanced topics.

The ARRL publications are of high quality, and their publication,
"Now You're Talking!" is reputed to be very good for starting out.
I think you can even find that at Radio Shack.

You can get a small HF station going for less than $500, and if you are
particularly good at scrounging, perhaps for less than $200.

But if you want to start with a modern transceiver, you will need to
pay considerably more.

If you're only interested in VHF (using handi-talkies to key up the
local repeaters in your area), you can get a reasonable single-band
HT for about $200 new.

>I am proposing the creation of alt.radio.amateur.tenten.

Hi Duane,
May I suggest that you rename the group to a.r.a.tenmeters so you don't discourage avid 10M ops who aren't 10-10 members from participating? I believe the primary purpose of 10-10 is to focus on 10M operating and keeping the band active on these sunspotless years, not just the furthering of the 10-10 club. a.r.a.tenmeters can then become a 10M clearinghouse for the latest band openings, contests, antenna designs, lastest 10M-only equipment on the market, who worked whom, beacon lists, repeater frequencies, etc. I think you'll be restricting the information flow if you just limit yourself to 10-10 club articles. But if that's your purpose then an email reflector would probably be a better idea - reflectors are much more focused and intimate than newsgroups.

73 from expensive Hawaii,
Jeff NH6IL

1861. Test Locations MN

I need to know where I can take my test. I have tried both of the local radio clubs with no success. I have been waiting 3 years for them to hold a testing date to no avail.

I live 60 miles from Minneapolis, Minnesota and was wondering if anyone could tell me where I could test or give me a name and number to call.

Also, I have heard talk of a new question pool. Is the book I bought: Now You're Talking! a current text.

Any help would be greatly appreciated.

1862. Amphenol BNC connectors

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-10 01:58:52 UTC
From: mconner@rain.atms.purdue.edu
Message-ID: <3heh8s$7f6@mozo.cc.purdue.edu>
Source record: 252260
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I bought some Amphenol BNC connectors for both RG-58 and RG-8X cable.
When I went to assemble them, I found that the hole in the back of the
center pin where the center conductor is to go is far too small.
Since this was true for two different types of connectors, I figure
that it wasn't a manufacturing error.

Are you supposed to

(1) trim the number of strands for the center conductor down until
they fit in the hole? This seems to be a not-too-bright method.

or (2) use a drill to carefully ream out the hole to the desired size?
This seems fraught with difficulty because of the small sizes
involved.

or (3) something else altogether.

I'd like to use BNC connectors since I do work 440 often, but have
been using PL-259s because they're so much easier to deal with.

It turns out that he was NOT using a HAM radio after all. He was using a stolen D.E.M. radio (according to
friends of mine at D.E.M. in Rhode Island). Why is this person choosing to turn this news story into
a diatribe against No-Code Techs?

1865. Japan Packet clusters on the NET???

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-10 03:05:22 UTC
From: compwiz@panix.com
Message-ID: <3hel5i$ief@panix.com>
Source record: 252263

I am trying to locate an Internet gateway to the Japanese packet cluster
or PBBS networks...

Any info will be greatly appreciated.

You can either post on the group or reply to Ed Kritsky at
ekritsky@mcimail.com or send packet message to NT2X@KC2FD.#NLI.NY.USA.NA

TNX and 73's

A few years ago, I was building a medium sized Tesla, with a
neon transformer. Before I started, I subscribed to a most excellent
newsletter, the Tesla Coil Builders Association. Couldnt be a better
title. I dont know if its still around, but write to them at:
RR6 Box 181, Amy Lane, Glens Falls, NY 12801.

Did anyone ever produce a left-handed semi-automatic mechanical keyer (bug)?

KG6FR will be operating from Jefferson Elementary School in Berkeley on 10, 15, and 20 (sometimes 40) beginning 2/13 at 0900 PST. We are especially looking for contacts with other schools, but will welcome all contacts. We are a K-3 school. The children are excited about talking with people across the U.S. and Canada. Last year some children had a long conversation with a ham in New Zealand.

Please call us if you hear us and tell us about who you are and where you live.

1869. Re: electron flow

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-10 04:19:53 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9502100419.AA00410@metro.mccneb.edu>
Source record: 252267

There are actually THREE opinions on which way electrons flow:

1. The general thought is that electrons flow from negative to positive and the "current" flow in the opposite direction.

2. Electrons flow from positive to negative (now mostly discredited by lotsa folks).

3. THERE ARE NO ELECTRONS.
-- that's the title of a book by Kenn Amdahl, subtitled "Electronics for Earthlings".
Published by Clearwater Pub Co, P O Box 1153
Arvada CO 80001-1153 ISBN 0-9627815-9-2

Can't be too bad; I read it just before taking and passing my Tech+ exam, although it seemed to have little effect on the code test. Worth a look for those seeking a useful way of relating to electronic magic.

Message-ID: <199502100453.WAA00174@mail.cs.utexas.edu>
Source record: 252158

Depending on how you look at it, I'm either a cheap skate who won't pay the admission price to join the ARRL, or I'm idignant at that price of admission. Bottom line: I get my QST monthly at the news stand. The cover format has changed a bit to align the publication more with regular stand copy. Looks good, though (my opinion)

1872. kenwood mods requested

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-10 05:04:22 UTC
From: mdowning@netcom.com
Message-ID: <mdowningD3rq3A.FH@netcom.com>
Source record: 252269

I am looking for available mods for a kenwood TH79A, and also a kenwood TM742A with 220 module added. There are rumors of keystroke mods available. I am mainly concerned with extended receive for both radios, and opening up 440 to allow tx from 420-449.

Thanks

>
>Bob W9UCR
>

I have had mine for about a month now. I am also happy with it. I have found the noise reduction effective. With poor SSB voice, it tends to smear the voice too much if set above one third. The most pronounced noise reduction is in the last quarter of control travel. On better SSB, I have been able to set the control on full and still understand the speech. The salesman I bought it from was concerned about the number of controls and functions. I enjoy the configurability, and I have found the various modes effective. There are some quirks in the steps necessary to create and store several custom filters at the same sitting. Still, I was able to customize filters for several modes of my decoder card. Even after a few weeks, toying around with the controls has allowed me to get more natural sounding speech out of it. I will be elated if MFJ actually releases upgrades. So many other manufacturers of upgradable firmware never seem to get the upgrades out. It would be even better if they made the upgrade eprom files available by BBS. Free upgrades would be great.
Bye... Ted..

1877. DX Request

: Australia NSW Division it was necessary that our submission was
: produced in a professional manner.

Just let me say, that preparing a report in a professional manner, and
behaving same seems to beyond the WIA and its spokepersons at the moment.

: Again once more I appeal to people, who have not written to do so.
: If you think that the licence issue has been won, think again. I
: will shortly read a letter, which has been written by Ms. Christine
: Goode, the Manager of the Spectrum Management Authority on behalf of
: the Minister to a fellow Amateur. Listen carefully. She is quite
: clear in her statements that the fee increases are here to stay.
: There does however seem to be an admission, that the politicians have
: the last say....So, once again, if you have not written -- write now!!!

Lost cause.

I urge all amateurs to hit the SMA where it hurts.

If you can afford it take legal action against them.

If you can't afford that, do it my way, simply refuse to renew your license.

Some have said that this is exactly what they want :-) Ok they've got it.
I simply refuse to pay $70 odd bucks for what is a hobby, and not a very
good one anymore anyway.

Exactly what do you get out of the hobby anymore ? Is it really worth it ?
Would you be better off investing in a better computer and surfing the
internet ?

Everything once possible over AR has now been replaced by the Internet.

Is it really worth hanging on ?

Graham.

Vinod Narayanan (vinod@kariat.watson.ibm.com) wrote:

: A fellow ham is visiting the UK in March, and is looking for
: some information. Any help is much appreciated. He would
: like to receive information on the following:
: 1. Do repeaters usually use a tone burst system? (If so,
: anybody know if add-on units are available?)

All repeaters accept a 1750Hz tone, all repeaters are "Open" to all licenced users as a condition of their licences. Some repeaters are being modified to accept CTCSS sub-audible tone operation as well as toneburst operation. Some repeaters have narrow tone acceptance bands, even so some local characters use a sliding whistle into their mics quite successfully...
No knowledge of add-ons. UK versions normally include toneburst, for the bargain price of 100% mark-up on US list :-)
On 2m, channel spacing is 25kHz, repeater inputs are 600kHz lower than their outputs.

2m band is 144-146 only, take great care not to go outside, it's full of emergency services paging systems etc and is heavily policed (pun)

70cm band has some sections banned in some geographical locations, you need to get a proper bandplan. Repeater shift is +1.2 MHz.

For 2m listen on 145.600 , .625, .650, .675, .700, .725, .750, .775 for repeater activity. If you tail-end others after the "K" you can get by without toneburst.

: 2. Repeater frequencies (2m or 440) in the Machester
: area and London area (He is also visiting a town about 90
: miles due north of Heathrow, I don't remember the name and I
: am a little shaky on the geography, that may fall in the
: Manchester area..apparently, it is the town where the Bronte
: sisters used to live, if that helps ..)

It's called "Haworth" in Yorkshire, several miles north of Halifax/Bradford. More like 200+ miles north of Heathrow. We took some visitors to the G-QRP convention there last October. I was born 25 miles away and remember it as it was, nowadays it's totally dedicated to tourism. Stuffed with antique, curio, souveneir, shoppes all harking back to a golden, wholesome, past without any mention of working hours and conditions, disease, child labour etc.. There are two views of the period and area, one is all "Dark satanic mills.." the other is all "Golden age and folksy" . Balanced views are much rarer. The nearby "Keithley and Worth Valley" full-size steam railway is superb, and fully

authentic as it is original.

: 3. Reciprocal licence info (I believe he is already looking
: into this).

ARRL should have fact pack

: 4. Any special restrictions on bringing equipment in. (He is
: just looking at bringing in a dual-band HT, I think it is an
: FT 530).

Should not be a problem, some proof of ownership, and ability to
show that it is a real radio to keep airport security types happy is
a good idea.
FT530 reputation is not too good, friends who had them found several
areas where overload/intermod of RX made them unusable.

: Please reply directly by email, as this is probably not of
: much interest to the general readership here. Many thanks in
: advance!

Who knows, it might spark some other interest.

Cheers
David GM4ZNX

Hello everyone you are all invited to the "Best of 75 Net on Suday Night". The net will conviene on Sunday evening at 1930 Eastern on 3975khz.

Last week we had a blast! We had a horse race where the gangs from all up and down the band check in. The gang from 3898 won with Bob Cruz stretching out his lead in the final minutes. Bob Nelson from Texas on the phone patch. Several of the letters written to the FCC, Congress, and the Senate were read over the air.

This week we plan to have an even better time. Fred Maia W5YI of the W5YI Report will be with us at 2100 eastern. Fred is going to be answering questions pertaining to the latest on the Glenn Baxter broadcasting vs. the FCC. It seems there are a few unanswered questions that have some interesting answers.

Fred has some information about the vanity call sign issues as well. Fred and his Washington reporter Bennett Kobb have been interviewing within the FCC this week and we will have the info for you Sunday evening on the net.

If you have some questions you would like to ask Fred you can check into the net Sunday Night or you may leave them for me at my email address.

See you on the Radio

That's where astronomers go when it's cloudy. :-)

When it's clear, IR will certainly work for line-of-sight paths.
Lasers are best, of course, but even incoherent sources can be
used with the proper collimating telescopes on each end.

Note: what's clear to IR and what's clear to visible light can
be two different things.

The most important advice is "don't fall off". :-)

Use temporary guys while erecting the tower. Even if it will eventually
be freestanding, it's not stressed for the loads imposed while being
erected.

"Real" RG-58 has a solid center conductor. The stranded center conductor RG-58 "like" cables require a different connector.

>with this setup, I make snow out of the TV picture. Makes the XYL unhappy.
>At some point, I'm going to a higher power xmitter, which will make the
>really bad snow even worse!

As pointed out by another rram reader, some TVs can function well near this
relatively strong VHF signal, others can't.

First, make sure that the TV antenna installation is in good order. Broken
feedlines, old corroded antennas, etc., can result in the TV received signal
being weak. If the TV is fed with twinlead (300 ohm), replace it with
75-ohm coaxial cable.

The next thing to try is a notch filter. What works real well is the
notch filters used on cable TV. Cable channel 18 (channel E) includes the
2-meter band, so a CH18 trap can prevent your 2-meter signal from getting
into the TV. The one I have used is made by Star Circuits, POB 94917, Las
Vegas NV, 89193 (800) 433-6319. I believe that they sell single quantity,
but they did not return a recent phone call seeking information, so I don't
know if they are interested in the ham market. Their filter is tunable and
inexpensive, so it is quite attractive.

This filter needs to be installed in the TV feedline, BEFORE the first piece
of electronics. If you are using a mast-mounted TV preamp, first determine
if you really need it in your area. If you do, install the filter on the
input of the preamp.

A number of information files about EMI problems are found in the ARRL
Automated Electronic Mail Server (info@arrl.org) and on the FTP site at
oak.oakland.edu. I also recommend our book, Radio Frequency Interference,
How to Find It and Fix It. Contact ARRL for information about our products
and services.

|>
|> Yes, I have a Radio Shack adjustable 0-20db TV amp up in my attic where
|> the TV antenna is. 1/2 watt with a rubber duck in the house will obliterate
|> any channel that is being watched.

Same problem here. My solution is very simple and cheap; a quarter-wave
trap made from a 19 1/4" piece of twin lead installed at the amp input
in parallel with the antenna feed. Works like a champ. (Leave the conductors
at the free end unconnected; this looks like a short at 145MHz). Only problem
is that the UHF channel on which we receive Star Trek is precisely an odd
harmonic of the frequency of the TCP/IP switch I use 24 hours a day. If we
got a stronger signal from that (distant) station the trap at the harmonic
might still be OK but as is the rest of the family fetches the screwdriver
and I have to remain QRT for about an hour a day...

YOUTH AWARD NEWS UPDATE

February 10, 1995

YAESU USA CORP. AND CQ MAGAZINE JOIN NEWSLINE
IN 1995 YHOTY SPONSORSHIP

Yaesu U.S.A. Corporation has been joined by CQ Magazine as a corporate underwriter of the 1995 Newsline "Young Ham of the Year Award." CQ Publisher Richard Ross, K2MGA, says the award is "very worthwhile for the future of the Amateur Radio service" and has pledged CQ's support and assistance in publicizing the award.

The Young Ham of the Year Award program is intended to highlight the accomplishments of the nation's many young radio hobbyists and to encourage more young people to join the exciting and rewarding hobby of Amateur Radio, perhaps leading to careers in science and technology.

The award was originated in 1985 by Bill Pasternak, WA6ITF, then editor-in-chief of the "Westlink Report" ham radio newsletter. When Westlink Report ceased publication earlier this year, Pasternak decided to continue the Young Ham of the Year Award under the banner of his own "Amateur Radio Newsline." Newsline is the world's largest non-profit and totally independent ham radio broadcast news and data information service. This all-volunteer group has aired over 900 consecutive weekly broadcasts of amateur radio news and information since its inception in 1976.

Yaesu U.S.A. Corp. has long been the sole corporate underwriter of the Young Ham of the Year Award program since its inception. The company is a world leader in the design, manufacture and distribution of high-quality Amateur Radio and commercial two-way radio equipment. It has long recognized the importance of the nation's youth to the continued vitality of the Amateur Radio service.

According to Yaesu U.S.A. National Sales Manager Kevin Karamanos WD6DIH: "Our company's decision to continue its support of this award has been well-received within the Amateur Radio fraternity, which is competing with other technical hobbies and specialties for the interest of young people."

CQ, The Radio Amateur's Journal, is celebrating its 50th anniversary this year as ham radio's leading independent magazine. This magazine is the flagship publication of CQ YHOTY '95 Page 2

Communications, Inc., which publishes a variety of magazines, books and videos for the amateur radio and hobby communications markets. CQ is a longtime supporter of efforts to attract young people to amateur radio.

"Nearly a decade ago, CQ represented the amateur radio industry in the development of the 'Archie's Ham Radio Adventure' comic book, the first promotional tool aimed specifically at young people," according to Publisher Richard Ross, K2MGA. "We are proud to continue that involvement as a corporate sponsor of the Young Ham of the Year Award."

This year's award will be presented at the Huntsville, Alabama, hamfest on the weekend of August 19-20. The youngster selected will receive an expense paid trip to the Huntsville Hamfest and other gratuities courtesy of Yaesu U.S.A. Corporation. Presentation of the award itself will be made at the Huntsville Hamfest Grand Banquet the evening of August 19. As an added bonus, this year's winner will be treated to a VIP tour of Spacecamp Huntsville and the Marshall Spaceflight Center, courtesy of CQ magazine.

Nominations for the Young Ham of the Year Award are open to any FCC-licensed ham radio operator aged 18 and younger, living in the United States, who has used Amateur Radio to significantly contribute to the benefit of the service, to the state of the communications art, to their community or to the nation.

All nominations must be submitted before the extended filing deadline of June 30, 1995 and must be on an official application available for a self addressed stamped envelope. Write to: 1995 Young Ham of the Year Award, c/o Newsline, 28197 Robin Avenue, Saugus California 91350. Official applications are also available electronically with an E-Mail request to: BILLWA6ITF on America Online; B.PASTERNAK on GEnie or billwa6itf@aol.com via the Internet. Applications can also be downloaded from the America Online and GEnie ham radio BBS software libraries.

Past recipients of the Young Ham of the Year award include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis,

KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991); Angela (Angie) Fischer, KBOHXY, also of St. Louis (1992); Kevin Boudreaux, N5XMH, of New Orleans Louisiana (1993) and Allison Zettwoch, KD4CKP of Louisville Ky. (1994).

For further information please contact Bill Pasternak % Newsline at (805) 296-7180.

THE 1995 YOUNG HAM OF THE YEAR AWARD
NOMINATING FORM
INSTRUCTIONS

1) Fill out the attached nominating form completely.

2) You are required to supply full and complete verification of any claims made regarding your nominees qualifications. This can include, but not be limited to letters of confirmation from others involved in the same activity, newspaper or magazine articles detailing the accomplishments of your nominee; recordings of TV or radio news coverage of your nominee's achievements, etc. Use your imagination. The more documentation that you supply, the easier it will be for our judges to reach a decision.

3) This award is not a contest for a prize. Any prizes given are incidental in nature. A person selected as "Young Ham of the Year" is judged on his/her contributions to society through Amateur Radio. For example, a youngster whose only claim to fame is that of "being licensed as an Extra at age four" would not necessarily be judged as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 year old Novice running a net during a major disaster would definitely be given consideration.

4) The Amateur Radio Newsline (Newsline) sponsors the award program and guarantees that the winner will receive a plaque noting this honor. All other gratuities are provided at the will of any corporate underwriter. An underwriter may, at its opion provide the winner with a trip to an Amateur Radio convention or hamfest of our selection. This trip will be limited to transportation for the winner to the venue, hotel accommodations, convention and banquet tickets and a prize. Not covered are any miscellaneous costs such as local transportation, incidental meals, locally made purchases, etc.

5) Neither Newsline or any corporate underwriter provide transportation or lodging for a parent, other relative or guardian traveling with or accompanying the award winner to the convention city. A parent, relative or guardian is free to share accommodations with the winner based on their personal arrangements.

5) In the event that a winner is unable to travel to the convention, the Newsline will attempt to arrange a special award ceremony where the recipient resides; IE: in his/her school, before his/her radio club, etc. In this case the trip to the convention will be forfeited by the recipient, but all other terms of the award will

remain.

6) Decision of the judges is final.

7) Please mail the nominating forum along with all substantiating materials before June 30, 1995 to the 1995 Young Ham of the Year, 28197 Robin avenue, Saugus Ca. 91350

1995 YOUNG HAM OF THE YEAR
NOMINATION FORM

Date:_____
ABOUT YOU

Your Name:_____ Your Call Sign:_____
Your Address:_____
City:_____ State:_____ Zipcode:_____
Your Home Telephone (incl. area code):_____
Your Work Telephone (incl. area code):_____

WHO IS YOUR NOMINEE

His/Her Name:_____ Call Sign:_____
His/Her Address:_____
City:_____ State:_____ Zipcode:_____
His/Her Telephone (incl. area code):_____
Mothers Name:_____ Fathers Name:_____
Sisters/Brothers (list):_____

GIVE THE FOLLOWING INFORMATION ABOUT THE NOMINEE

Age:_____ Male/Female:_____ School Attending:_____
School Address:_____ Teacher:_____

List dates and name of administering VE Team for the following Amateur Examinations taken and passed

Novice:_____ Examiner:_____
Technician:_____ Examiner:_____
Technician Plus:_____ Examiner:_____
General:_____ Examiner:_____
Advanced:_____ Examiner:_____
Extra:_____ Examiner:_____

Tell us why your nominee should receive this award. (PLEASE BE SPECIFIC. Use additional sheets if necessary. YOU ARE REQUIRED TO INCLUDE substantiating documentation to verify any claim made.)

Your Signature_____

Mail To: The Young Ham of the Year Award

These mast-mount TV preamps can be a source of RFI, too. If one of them
starts oscillating, it can be really difficult to track down. A local
repeater had exactly this problem for a couple of years; it was eventually
traced to such a pre-amp, the owner didn't remember he had one.

Here is a list of ARRL HQ staff addresses:

ARRL EMAIL ADDRESSES
File: users.txt
Updated: December 13, 1994

The following ARRL HQ staffers, Officers, Directors and Vice
Directors can be contacted directly via the Internet at the
addresses shown. A brief description of the specific duties of the
individual is included so you know who to contact.

People not listed do not have public email addresses and cannot
respond by electronic mail. Other questions and messages to other
specific HQ staff, Officers, Directors and Vice Directors should
continue to be addressed to hq@arrl.org. Messages so addressed
will be received in the "front office" here at ARRL HQ. They will
be printed and distributed to the appropriate people by inter-
office or postal mail.

You should include your postal address (the slow kind) with all
correspondence to ARRL in case we need to send you non-electronic
material in answer to your request.

Gary,

Maybe it's "thinnet Cable" a reasonable substitute for RG-58, but
it takes a different connector than RG-58.

I don't encourage no-code tech hams to upgrade because I think there's something wrong with holding that class of license. I encourage the upgrade because I think the HF bands have the most entertainment value. HF propogation is fascinating. Let's face it, a satellite is just a repeater in the sky! It's only on the HF bands that you can work the world w/ a watt of power and a dipole antenna. You just can't do so much with so little at VHF/UHF frequencies.

HF is a blast, and that's the real reason no-code techs should work toward getting HF privileges!

From: kg5ai@w5ac.tamu.edu
Message-ID: <3hgag2$mj7@news.tamu.edu>
Source record: 252200

No, this is not because of a talkback modification. I also did the frequency mod for the radio, but the audio coming through the speaker has nothing to do with this. This noise has bothered me but I have never seen anything about fixing this. I've thought about running some line from the microphone to cut off the speaker when keying up. I've never done it since I hardly even use the radio now. As far as the squelch making the speaker pop, this happens on several ham rigs. For whatever reason, scanners have a nice quiet squelch and even seems to open quicker than some ham rigs. Maybe someone can talk about a certain size capacitor across the speaker to silence the pop a bit, and maybe it would muffle the "talkback" audio a bit too.

I had the same problem with my Ford truck. Ford will install an RFI filter inside your gas tank at no charge, if your vehicle is still under the bumper -to-bumper warranty. Your Dealer might try to give you a hard time about it.
I can fax you Ford's service bulletin thats describes the problem, how to fix it, and what models/years are covered. My dealer would not co-operate until I produced it!

: than one of your own will cost...

Or go to a hamfest with someone who has been around ham radio for a
sometime and find a good deal on a used rig.

There are tons of Icom IC-2AT, 02AT (3, 4, 03, 04 etc) Yaseu FT-209RH
(109/709 depending what band you want), Alinco HT radios out there that
can be picked up with accessories for a good price.

I bought my first radio at the '92 Tampa hamfest, with two batteries,
wall charger, soft case, duck for $150. It was a FT-209RH is great
condition. Since then I've found a FT-709R and FT-109RH (yea I do 220 even.)

Sounds like you got the wrong type of connectors. BNC connectors
for RG-58-size cable should fit almost all of the .195" OD varieties
of 50 ohm cable, including RG-58/U, RG-58A/U, RG-142B, RG-400, et al.
so I am at a loss as to why it won't fit on your RG-58.

However, my guess is that you were given BNC's designed for RG-59
instead of for RG-8X. Both RG-59 and RG-8X (aka "mini-8") have
a nominal outside diameter of .242", but the center conductor is
smaller on the 75 ohm RG-59 than the 50 ohm RG-8X. Low-budget
connector vendors or vendors who simply don't know any better will
interchange the two, which is obviously a bad idea. Not only
are they different mechanically, but their characteristic impedance
is different, too.

Another common connector mis-use is using RG-8/U type N connectors
on Belden 9913 type cables. Belden 9913 and its equivilents use
a larger diameter center conductor than RG-8/U, RG-213/U, and other
.405" OD solid-dielectric 50 ohm cables. The same type N connectors
that are made for Belden 9913 should also be used with Belden 8214
and other RG-8-type foam-dielectric cables as they, too, have a larger
center conductor. Filing down the center conductor in the case of
9913, or snipping off a few strands for RG-8 foam is not the right
way to go.

: andy-k4adl

It has been available at the newsstand since mid (last) summer. Bloody expensive though (about $7.25 Canadian with taxes). I wish the ARRL would get with it on the way they mail QST subscriptions i.e. make some kind of bulk mailing to Canada and then mail them out at reasonable rates.

QST is an EXCELLENT periodical, but is too expensive for many just getting into the hobby.

The connectors fit properly as far as overall OD goes. It's the hole
in the center pin where the center conductor goes that's the problem.

>However, my guess is that you were given BNC's designed for RG-59
>instead of for RG-8X. Both RG-59 and RG-8X (aka "mini-8") have

If so, AES at Milwaukee should know better, since the connectors are
listed as being specifically for RG-8X. The package simply has a part
number in lieu of listing the cable it's for, so it's hard to tell
what I acutally got.

Another ham here at Purdue suggested (thanks Bret N9ZFF) a local store
that carries Caltronics connectors. I tried out the fit at the store
and these pins fit properly over the center conductor. Still bugs me
that the Amphenol ones don't. There's a phone number on the Amphenol
package - guess it's time for a WTFO phone call. Maybe I'll work that
in after I get done sending a fax to the spam-of-the-week author.

>I'd also like to know how, and what i have to do to get my license

You can find out the answers to most of these questions by ftp'ing
to oak.oakland.edu and picking up the file
/pub/hamradio/arrl/infoserver/ead/prospect.txt. You can also get the
book "Now You're Talking" from any Radio Shack. Briefly, the license
requires taking some tests in basic radio and electronics theory and
FCC regulations (which will be administered by an amateur radio group
somewhere near you (hopefully)), and (if you want to operate on the
shortwave/HF bands) an optional Morse code (5 words per minute) test.

As to the price of equipment, ham radio gear can be as expensive as you
want it to be -- or (almost) as cheap as you want it to be. If you are
interested in operating on the HF bands, there are many relatively inexpensive
kits available for low-power single-band transceivers (as cheap as $40);
however, low-power operation can be tremendously frustrating for someone
just starting out (to say nothing of the seasoned ham :-). You can also
find used amateur radio equipment relatively cheap; if you manage to find
other amateurs in your area, you may find someone with an old boat-anchor
or two they can lend you (that's how I got my start). For VHF and UHF
operation, kits are much scarcer, but there's always used equipment (and
the odd freebie now and then).

Finding other amateurs in your area is a very good starting point; if you
contact the American Radio Relay League (authors of the above-mentioned file
and book!), they can also help you find clubs in your area. Many old-time
(and recent, too!) amateurs cherish a chance to act as an "elmer" (kind of
a cross between a teacher, mentor, and your Uncle Elmer) for a new ham.
If nothing else, you might try looking around your neighborhood for someone
with way too many antennas on his or her house, and asking if they're an
amateur radio operator. (Note: SOME hams, like some of any other hobby group
you can think of, are jerks, so don't COUNT on a warmer reception than you'd
get from any random person. But I hope you'll be pleasantly surprised if you
try this tack!)

Hope this helps!
Good luck and best regards,

1918. K6VFE, SK

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-10 22:01:45 UTC
From: greg@netcom.com
Message-ID: <gregD3t16x.EMq@netcom.com>
Source record: 252193

It saddens me to report the passing of K6VFE, Sister Mary Charlotte, CSC.

Sister Charlotte's shack at St. Catherine's By the Sea in Ventura, California, was the first real 'ham shack' I ever visited. When my grandfather brought me there (I was around 13), Sr. Charlotte was just checking in to WestCARS.

Over on the bench was an old Johnson novice transmitter which was getting ready to go to a young ham.

The TR3 that was the main rig looked very cool to me.

From that moment, life was not the same.

Well, I got my license. And Sr. Charlotte relocated to a different residence in the mid-west. Her shack was in a building that went the way of many old school buildings, and met the wrecker's ball.

What remains, though, are a great number of lives touched and changed by this great lady and teacher, both in Ventura County, and in other more far-flung places.

73's Sister.

Greg

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 FEBRUARY AND FORECAST FOR 11 FEBRUARY - 13 FEBRUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 09 Feb
Daily Proton Fluence >1 MeV: 2.4E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 8.8E+06 (normal)
X-ray background: B1.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Feb 12 Feb 13 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Feb: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 09 Feb
Learmonth 4 1211 1211
Fredericksburg 2 4
Planetary 5 6

Observed Kp for 09 Feb: 2322 1211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Feb 5 Quiet
12 Feb 15 Unsettled
13 Feb 23 Active
COMMENT: Active levels expected Feb 12-14, due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

10 Feb normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Feb normal normal normal
12 Feb normal normal fair
13 Feb normal fair poor
COMMENT: Degraded HF comms conditions are expected during the period 13-14 February, at mid and high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
10 Feb 29 Near predicted monthly values, however frequent blanketing sporadic E was observed

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
11 Feb 20 Near predicted monthly values
12 Feb 15 Near predicted monthly values
13 Feb 15 Near predicted monthly values/depressed 10 to 20%
COMMENT: Sporadic E blanketing was observed during daylight hours at Canberra and Sydney. Depressions of up to 20% were observed at Townsville and Hobart after dawn yesterday. Spread F and blanketing sporadic E was observed at Hobart during local night. Enhancements of up to 50% were observed at Townsville during local night. Degraded HF comms expected after 13 February.

Digital meet scheduled

The 14th annual ARRL Digital Communications Conference will be held September 8 to 10 at the LaQuinta Conference Center in Arlington, Texas, near Dallas.

Co-hosts for the conference are Tucson Amateur Packet Radio Inc. (TAPR) and the Texas Packet Radio Society.

The ARRL Digital Communications Conference is an international forum for radio amateurs and experts in digital communication, networking, and related technologies, at which they can meet, publish their work, and present new ideas and techniques for discussion.

Presenters and attendees can exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.

Anyone interested in digital communication is invited to submit a paper for publication in the Conference Proceedings. Attendance at the conference is not required for publication. Papers are due by July 21, 1995, and should be submitted to Maty Weinberg, at ARRL Headquarters.

For more information on the conference, registration, and hotel reservations, contact TAPR at 8987-309 E. Tanque Verde Rd, No. 337, Tucson, AZ 85749-9399 USA. Phone 817-383-0000; Fax 817-566-2544; Internet: tapr@tapr.org.

Help with history

The Antique Wireless Association is building a replica of the famous 1BCG transmitter used in the 1921 ARRL Transatlantic Tests--the first to send a complete message across the Atlantic.

The AWA hopes to have the transmitter operating sometime this fall and to be able to work amateurs who participated in the 1921 Tests.

The AWA knows of only one licensed amateur (other than 1BCG) still active who was heard by Paul Godley, in England--Jim Russell, now W8BU, then 8BU. Another participant, Bob Morris, W2LV, also is still active. The AWA would like to hear from other amateurs who might have heard 1BCG during the Tests, including amateurs in the US. 1BCG was operated from East Greenwich, Connecticut, by members of the pioneering Radio Club of America.

1BCG was on 230 meters in 1921--the AWA, using the call sign W2AN, will put the replica station on 160 meters. The transmitter will be identical in all respects except that a 204 vacuum tube, vintage 1923 or 1924, will be used.

Details of the ARRL Transatlantic Tests appeared in February 1922 QST and have been reprinted in several ARRL publications.

If you can help, contact AWA Curator Bruce Kelley, W2ICE, 59 Main Street, Bloomfield, NY 14469.

From Tad Cook, KT7H
Seattle, WA February 10, 1995
To all radio amateurs

SB PROP ARL ARLP007
ARLP007 Propagation de KT7H

Solar flux last week was about the same as the week before.
Conditions were unsettled on March 2 and 3 and again on March 8,
with the A index in double digits. Activity should continue low,
with the flux heading down to the mid 70s around February 12 through
14, and up to a peak near 86 around the 18th and the 19th and again
around March 2 and 3. Look for active geomagnetic fields and
unsettled conditions due to recurring coronal holes from February 13
to 14 and again around the 25th through 27th.

Sunspot Numbers for February 2 through 8 were 76, 69, 63, 85, 55, 23
and 19, with a mean of 55.7. 10.7 cm flux was 86, 82.7, 86, 81.1,
84.3, 83.8 and 85.5, with a mean of 84.2.

The path projection this week is from Springfield, Illinois to Guam.

80 meters should be open from 0830 to 1300z, and 40 meters from 0730
to 1330. Try 30 meters around 0930 to 1000 and again from 1430 to
1530. 20 meters may be open around 1530 to 1630 and with somewhat
weaker signals from 2030 to 2330. Check 17 meters from 2100 to
2200. On some days 15 meters may be open around the same period.

1927. GMRS - what are the rules, how to get license?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-11 01:02:36 UTC
From: henniger@cisco.com
Message-ID: <henniger.792464556@cisco.com>
Source record: 252157

I am a licensed ham, and am interested in exploring the possibility
of allowing my family access to the radio waves via GMRS.

I am interested in what the rules are for GMRS,and how to get a license.

[power levels, antenna height, gain restrictions, frequencies, etc.]

Has anyone had experiences with GMRS?

Thanks,
Mick

>>not in either rig.

>The way this radio functions is that the rx local oscillator (f-11.7) is mixed
>o produce the tx carrier freq. There were several versions of this unit.
>According to the manual a "Standard" model had

The trouble with this terminology is that the Government split
radios called simplex "standard" and the commercial split
radios called the 5MC offset mode "standard", with the
respective remaining offset called "wide-spaced". Otherwise,
the description is accurate.

That is going to be some repeater with the input frequency
the same as the output frequency! At least it is
spectrum-efficient.

Be certain to tune the radio on a spectrum analyzer. It
is possible to tune those exciter filters to any numbe
of mixing products, sometimes with each coil on a different peak!
That looks neat on a spectrum analyzer as long as the radio
is transmitting into a dummy load; do this into an antenna
and you could write the book "How to lose friends and
piss off people." Meter readings for this part are misleading
for this very reason. A spectrum analyzer lets you know
exactly what is going on.

For the ham split I think you want a TFE6213A. I just looked
into a MICOR that is giving me problems and it has a
TFE6214A which is the next higher split. That might be the
source of my trouble! Now I'm not sure which one is usable
on the ham split.

If you need to take the receiver much below 447MC you'll
need to change the front-end coils. I ordered the Motrac
coils for the ham split (yes!), but I suspect that they
are N.L.A.. In that case, order the 406-420 coils and
trim about 1/16 of a turn off of each one before installing.
Ensure that there are no filings left on the coils before
installing.

>that the crystal needed is no longer available from motorola. I have sent a
>sample one to sentry crystal and they are going to try to reproduce it for me.

We got some offset crystals from International because we
needed some wacko frequencies for our repeater network;
they did not work, probably due to the fact that the circuit
was never designed to operate at that frequency. We have
since discovered a much better way to do it.

We also got some from a company in Kentucky
named Hy-Q Crystal and they not only have lower prices
than International (DUH!), they also have good crystals.
We sent them three stock Motorola offset crystals for
them to emulate, so now they know how to make offset crystals
for UHF MICORs.

>The warp coil needed is still a cureFzvPnt item and costs under $2.

I saw MICORs on Motorola's endangered species list a couple of weeks
ago, so you might begin to have trouble ordering parts
for them. Besides, in addition to a new warp coil, you need
a phase inducer and a matter/anti-matter injector. Of course, this
all assumes that your dilithium crystal chamber is in good shape.

>license with a lesser quality person.

Hi Carl and Cassandra,
I don't see where Mike said anything about a particular class of
license. Why are you concluding that `lowering standards' equals
the Tech no-code license? Might you be feeling a bit insecure?

My interpretation of `lowering standards' is:
* Doing away with 1 out of 5 minutes perfect code copy (no corrections
allowed) in favor of questions regarding what was sent
* Doing away with the trip to the FCC office in favor of non-professional
volunteers as examiners
* Publishing the test questions and answers
* Much easier questions than I recall being given back in '76

Carl, can you express yourself without offending the young hams
who read this newsgroup? Just because Jeff Angus uses gutter-
language doesn't mean it's acceptable.

Keep in mind there are two Jeff's in the following - the bad-mouthed
Jeff Angus, and the nice Jeff NH6IL in Hawaii:

jangus@skyld.grendel.com (Jeffrey D. Angus) writes:

> [Jeff's penchant for stepping on his dick deleted.]

Hi Jeff A.,
Thanks for the compliment, Angus, but that's not physically possible.
Now, let's see why you're so riled up:

> As usual you just have to jump in and make an ass of yourself. I have
> already posted an appology here on the net and to the originator via
> e-mail about mis-reading his intent on using K1MAN as a beacon.

Well, I don't page down hundreds of articles to read all the followups
to a particular post and neither does anyone else. You erred, I
made a nice comment, you posted an apology (one p) that I hadn't read yet.
Now you turn on me like a vicious dog. Shame on you.

> Perhaps while you're at it, you'd like to repeat your claim that I am
> (or was) bootlegging your callsign here in Southern California.

The DF info and the tapes came from Southern California hams.
I alluded that someone in your area was using my call. Why would you
think I was fingering you? BTW, you've got some expert DF guys on
your side of the Pacific; they're very professional.

> Maybe instead I just repeat someone else's remarks about you serving
> time on a sodomy beef.

You've got that backwards. I'm the one disgusted by that type of
gay behavior on this campus, remember? It's still illegal in this
state.

> And as usual for you, a completely off topic remark about my signature.

You mean about your `off topic' signature?

> This posting should rate at least an 8 on the NH6IL whine-o-meter. I managed
> to mention, dick, ass (twice) and sodomy in the above posting.

You get a C-.

>> > Robert WD5AAT

The Icom 730 did not require a stero plug for the C.W. key.
The problem is the accu - keyer has a grid block keying circuit
and the IC-730 requires positive keying voltage of less than 0.4 volts.
Having built several accu - keyers and a former owner of a IC-730 I have
crossed this bridge many times. Another good method is to have the accu - keyer
just key a small reed relay, then you need not worry about keying polarity.

Robert J. Raymond (bobr@on-ramp.ior.com) wrote:
: Can anyone give me some details on what a gin pole is and how it is used?
: I understand this can be used to help me put up my tower? Thanks.

I hate posts which just say "I agree...", but I'll risk doing it to emphasize what Gary Coffman said. Installing towers, even very short ones, can be _extremely_ dangerous.

There's nothing wrong with your question about gin poles...you have to ask questions to learn. But it's a little like the the old joke about the guy who asked how much the Rolls Royce cost...the dealer answered "If you have to ask, you can't afford it." :-)

If there is a good radio club in your area, there are probably some willing tower "experts" who would much rather help you out than let you get hurt...and they will ask nothing in return, except that you help out someone else with something you know about.

DON'T PUT UP A TOWER WITHOUT EXPERIENCED HELP!

Message-ID: <3hi9j2$p5h@brahms.udel.edu>
Source record: 252183
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I need a broadband 80 meter antenna for contesting which is resonant and will not require a tuner. I am currently using a triband with 40 meter element, a Carolina Windom on 80 only, and an inverted L on 160.

The problem is that using a non-resonant antenna with a tuner throws RF all over the shack and drives the computer nuts. I want to put up some kind] of horizontal wire antenna which will be reasonably resonant on both the CW and phone segments.

Thanks......Bob

Question: Recently my Yaesu FT-530 battery seems to loose its charge
while just sitting on the shelf. I have two batteries and both of them
exhibit the same problem. Anyone else have the problem or an answer?

: files.

: Try an anonymous ftp to "SunSITE.unc.edu" and look in the
: /pub/academic/agriculture/agronomy/ham directory. This is a real file path as strange as it looks.

: Also ftp to "oak.oakland.edu" and look in the /pub3/hamradio directory.
: There are a large number of things there also.

I had this question myself only a few weeks ago. And I learned that
if you go to oak.oakland.edu you can find SuperMorse.

Bye and keep practicing.

All NiCads exhibit self-discharge. Good batteries lose only about 10%
a week sitting on the shelf. If your batteries are losing more than
that, they are probably getting near the end of their life. One symptom
of near end of life NiCads is that the self-discharge rate increases.
Most fail for some other reason before getting to this point though.

Gary

fun, i guess...and a radio is a lot cheaper than a good computer and will
probably not have to be upgraded or replaced every couple of years unless
someone comes up with a new modulation scheme to replace SSB...or FM..
>
>Everything once possible over AR has now been replaced by the Internet.

only if you can afford the network time -- costs money every month
to have a phone line, account at a service provider and all that.
get the radio, put up the antenna and the only ongoing expense is power.

Macintosh Amateur Radio Software - Feb. 1995
Version 1.0.9

Sorry I have been so delinquet in getting this list back to the nets... but I have been busy trying to recover from a hard disk crash! Please note that I have changed my e-mail address for BIG files. If you are so inclined to send them... please send them back to the address this post originates from.

Please feel free to distribute this list as widely as possible. Many of you have asked if it is OK to cross-post this list? I don't mind, but I would like to know where it is going. If you think it should be cross-posted to other USENET groups, please let me know so I can try and manage these. We don't want to have any duplication or our welcome will be wore out!

Those of you that can tell me about ANY of these programs compatibility with System 7 would be appreciated! I am going to be adding a System 7 compatability section to EACH description in future releases. If the application is KNOWN to execute properly under System 7, the System 7 anotation will be placed as the last line of the product description. More clarification on levels of System 7 compatibility in the future editions... but this is a start!

Some of the information in this list was gleaned from flyers supplied by the software vendors, or in some cases from reviews in amateur radio publications or the README files included with the archive. Some of the information has not been verified for a long time; please check with the vendors/authors for the latest product specs, pricing, etc.

NEW/CHANGES: I am continuing to add more version numbers so that our users will know if they have the most current release. Thanks to those that have already sent them in... I'll accept all corrections! I just saw on the net two other lists that I'll try and compare with this list very quickly and see if there are holes!

A new release of both NET/Mac and IM/Mac are now available.

The Mac version of Automatic Position Reporting System (APRS) is is NOW available at ftp.ucsd.edu. It really looks great... thanks Mark and Keith Sproul!

Check at the bottom of this list for more information on ftp'able sites carrying Amateur Radio software. The ARRL ListServer is also carrying the latest version of this list... in case you loose this one!

*** Collections ***
<MacNet v5.31>
Join MacNet and get included in the latest version of "Macnet Roster", a HyperCard 2.x stack that now has > 400 members and is the proverbial "Who's Who" of hams using Macs. You'll find "Macnet Roster" a great tool for finding out who, what and how other hams are using their Macs with their ham stations. It even includes this file!
Send $30.00($40.00 DX) check or money order to: WD1V, John Seney, 144 Pepperidge Drive Manchester, NH 03103 USA.
All disks shipped First Class Mail PPd. Get the COMPLETE Macnet Software Collection ppd. on 10 disks!
Based on your interests, you'll also receive public domain shareware received by our members.
System 7

<Project Mac>
Contest logging, antenna design, satellite tracking, clip art, etc. Microsoft BASIC required for many of the programs. Most of this software is now available in the MacNet collection. Send three formatted 800K Macintosh disks with stamped, self-addressed disk mailer to Stan Horzepa, WA1LOU, One Glen Ave., Wolcott, CT 06716-1442. Stan can be reached at horzepa@gdc.com
NOTE: Stan has indicated much of this software is "old" and may not work on some newer Macs. Also he notes that most of his collection is available in the MacNet collection above. He will send anyone what he has if you send him the disks and SAS mailer.

<Amateur Radio Software for Macintosh>
<Amateur Radio #1>
Contains satellite tracking, Morse code, attenuator design, and Ohm's law calculator programs. Kinetic Designs, P.O. Box 1646, Orange Park, FL 32067.

*** Test preparation ***
<Ham Test Stacks>
HyperCard stacks containing the entire question pool for each license class. Can be used for preparation or generating actual tests. The current releases are: Novice v4.1(new questions eff. 7/1/93), Technician v4.0(new questions effective 7/1/93), General v2.4, Advanced v2.4, Extra v2.4.
Available via anonymous FTP from various sites, including uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of Novice and Technician stacks are available at uxc.cso.uiuc.edu (5/6/93) Author is available via Internet: dls@genrad.com
NOTE: Diana no longer is supporting this software, she no longer has a Macintosh computer. Diana, thanks for your wonderful contribution to the Amateur Radio community for these stacks!
System 7 savvy with HyperCard 2.1

<MacHam>
Test generators and study aids for the Technician, General, Advanced, and Extra class written elements. Includes the complete question pool for each

license. Hypercard based.
Coyne Co., P.O. Box 2000-200, Mission Viejo, CA 92692.
System 7 with HyperCard 2.1

*** Morse code practice ***
<N6MZV Morse Trainer>
Lets you practice any combination of letters, numbers, and/or punctuation characters. Can send user-created text files.
RT Martin, N6MZV, 10382 Orange Avenue, Cupertino, CA 95014. Also available via anonymous FTP from ftp.apple.com (/pub/ham-radio).
Shareware.

<Morse Code Tutor v1.6> - used to be called Morse Tutor
Sends random groups of letters, numbers, and/or punctuation characters. Available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Or send formatted 800K Macintosh disk with stamped, self-addressed return disk mailer to Jack Brindle, WA4FIB, 726-175th Street SW, Bothell, WA 98012; Compuserve: 73365,606.

<MorseMania V1.0>
Designed for those already familiar with Morse code who want to improve their speed. Allows code practice at various speeds and audio pitches. Can generate random sequences or play the contents of user-created text files. Freeware. Available via anonymous FTP from simoon.stanford.edu (/pub). Contact Edward Plumer, KM6IQ, for more information; Internet: plumer@simoon.stanford.edu.

<MacMorse>
Randomly sends chosen characters. Lets you create your own practice files. David A. Kall, 700 Marine Parkway #314, New Port Richey, FL 34652.

<MacMorse v1.3>
MacMorse is designed to help you learn Morse code and improve your receiving speed. It has several ways that it can send letters and punctuation. Shareware. Doug Havenhill, Dynamics and Control, 7143 West Sunnyside Drive, Peoria, AZ 85345.

<MacSamuel>
Sends random words, random character groups, and user-created text files. Can also create simulated QSOs with randomly generated text and callsigns. Avant Systems, P.O. Box 5437, Pittsburgh, PA 15206.

<Zihua Morse>
Designed to teach Morse code to beginners and to improve the accuracy and speed of advanced users. Responses can be typed into the computer; the program will calculate accuracy and timing statistics for each session. Optional speech synthesizer reads the characters out loud for an accuracy check. Zihua, P.O. Box 51601, Pacific Grove, CA 93950.

<Sparks-II v2.0.5>
More Code training program. Available for anonymous ftp at rahul.net /pub/davidj/radio

<Morse Master v1.0>
The newest of the morse code training programs. MM calculates the real speed as follows: Real speed = Number of Words/end time - start time. And the lengh of word is generating randomly, so if you set even 5WPM, sometimes another value will appear. However you should believe the slidebutton's value. If you repeat many times, the average speed should be 5WPM (if not... anyway, believe the slidebutton's value). Archive is available mac.archive.umich.edu, path: mac/util/organization/morsemaster1.0.sit.hqx The author can be reached thru the following e-mail addresses: h79261a@kyu-cc.cc.kyushu-u.ac.jp. (Eiji AOL account is no longer valid - moved back to Japan after his studies.)

<Morse Trainer-US v1.1.1>
MorseTrainer is a powerful tool for learning and training Morse code. Features: Three different training modes: user text, random text, library text; Arbitrary signal pitch and timbre; Arbitrary speed and tempo; Multi-alphabet support; Random text generator; Text library editor; On-line alphabet; On-line manual; Help Balloons; And a lot more. New features in 1.1: Enhanced sound generator, volume control and risetime control. The pitch is set in steps of 10Hz instead of using MIDI frequencies; Speed and tempo limits increased to 80 words/minute as a result of the enhanced sound generator; User-selectable font in the Misc settings dialog. FREEWARE!
This version uses TrueType fonts instead on bitmaps fonts so that the user can distinguish 0(zero) from O(character). Furthermore speed and tempo can be given in either characters/minute or words/minute. Archive is available mac.archive.umich.edu, path: mac/util/organization/ Author is available via internet: sund@tde.lth.se
System 7 savvy

<CW Speed Builder v3.0>
This program is for improving Morse Code (CW) reception skill. The major difference between this and other Morse Code training programs is that this one will not continue sending until you provide the correct answer. Major changes which have been suggested and implemented since last version include: after three incorrect responses the program shows the correct character; the list of characters at the end which will show those you know and those you need more practice on; the frequency of the tone has been changed; volume of the tone has been reduced; the character " - " has been added (dah dit dit dit dah) Comments can be sent as follows: America Online:K7UPJ, Internet:k7upj@aol.com, Packet radio:K7UPJ@KA3T, Compu$erv:70521,2356, Mail:Box 84, Cascade, MD 21719

*** Packet and other digital modes ***
<NET/Mac 2.3.47>
Allows simultaneous TCP/IP, AX.25, and NET/ROM connections. Requires a TNC with KISS mode. Copyright, but free for noncommercial use. The latest releases have added support of multi-port serial boards like AE's QuadraLink. It is now possible to have up to 16 TNCs connected up to a Nubus Mac!
Adam van Gaalen, PA2AGA, (Internet: adam@IGG.TNO.NL) has been making the

modifications to NET/Mac. This version (and others) is available via
anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/incoming),
mac.archive.umich.edu and oak.oakland.edu (/pub/hamradio/mac/digital/)
System 7

<Domain-to-Hosts Converter 1.0r3>
This application will create a hosts.net file from the domain.txt file
that PC owners use with NOS. Created by Ken-NS1C is available on many
TCP/IP packet switches in New England.program.
System 7

<IM/Mac 1.0b28e>
Mailer program for use with the SMTP protocol. Alternative to the BM
program that comes with NET/Mac. Written by Ivo van Ursel, ON1XK. Ivo is
continuosly updating his mailer program. His newest release supports
StuffIt Expander 3.5.1,built-in BinHex support, selectable sound chimes
for incoming mail, "quoting" of forwarded messages and lots more. If you
are not using this program... why not? Check for the latest release in the
directory before "blind" ftp'ing. This software supports System 7's
Ballon Help and is System 7 savvy! Available via anonymous FTP from
ucsd.edu (/hamradio/packet/tcpip/incoming).
Author is available via internet: on1xk@igg.tno.nl <<-- new address for Ivo!!!
System 7 savvy

<SoftKiss 1.8>
Control panel device that emulates a TNC running in KISS mode. For use
with packet-radio modems such as the Baycom kit and PacketMac Modem.
Version 1.8 July 9 1993 update since 1.6. KD6PAG found a bug in quoting
recieved escape and end characters is sofktiss 1.6. The bug and the fix
and patch are all correct, thanks for some great detective work. Lots of
doc files and drawings included in this archive! Requires the Serial Tool
from Apple's Communications Toolbox! Available on the HAMNET forum of
Compuserve, America Online and via anonymous FTP from
akutaktak.andrew.cmu.edu (/aw0g).
System 7

<PacketMac Modem>
PacketMac Modem kits can be obtained from: Sigma Design Associates, P.O.
Box 49085, Colorado Springs, CO 80919, (719) 260-5513 (after 1/94). Dexter
Francis can be reached at FRANCIS4@AppleLink.Apple.COM

<Savant 1.0.2>
A new packet terminal front-end by the author of Virtuoso. Savant has a
split window interface, but it's also a multi-window, multi-connection
interface and will work with almost any TNC, unlike MacRatt or HostMaster.
A demo version of the product is available at cpre1.ee.iastate.edu
(pub/ke0ph) or via US Mail, send a SAS disk mailer and disk to CM
Technologies, Inc., RR#1, Box 83A, Kelley, IA 50134 (515) 597-2051.
System 7, 32-bit, '040 cache clean and it supports the required
AppleEvents.

<MacRatt with FAX>
Terminal program for use with AEA's PK-232 multimode controller. Supports packet, CW, RTTY, AMTOR, and facsimile. Includes cable. Advanced Electronic Applications, P.O. Box C-2160, Lynnwood, WA 98036.

<Host Master 1.2>
The Kantronics Host Master software provides an easy to use, multifunctional terminal program for the TNC. Host Master Mac is a simultaneous multi-mode terminal program for the Mac written by Kevin Krueger, N0IOS and marketed by Kantronics. It is a commercial product available from most of the ham radio stores and supports single and multiple packet connects, packet monitoring, and HF operation (with KAM) each on a separate window, all at the same time. This package retails for $69.95 in the US and is intuitive, friendly, and well supported by Kantronics. Current version as of 10/20/93 is 1.2. It is hoped that a future version will support FAX but currently Hostmaster supports PACKET, AMTOR, RTTY, PACTOR (KAM ver. 6.0), CW, and NAVTEX. Features: text and binary file transfer; packet conferencing; color or B&W windows; cut, copy, paste between windows; call exchange and data/time stamp; auto startup/shutdown commands; transmit buffers for each mode; simultaneous dual port, multiple connects; supports KPC-2, KPC-2400, KPC-4, KAM and Data Engine. Requires: Macintosh Plus w/ System 6.05 or better. Current Kantronics firmware.
System 7 compatible, with baloon help

<PacketTracker 1.07>
PacketTracker ver 1.07 is a SHAREWARE program that monitors packet activity and keeps track of what is going on. It draws a graphical map showing who is talking to who and displays statistics of all current stations and keeps a running tally of activity. PacketTracker was written for both the casual packet user and the network manager or BBS operator. The casual packet user will be able to learn a great deal about what is happening in packet around him; which stations are generating the most data and what some of them are. he will be able to see graphically what stations he can hitdirectly and which ones he cannot. For the network manager and BBS operator, PacketTracker provides extensive insight to the operation of the local network and problems such as excessive retries on a path. It also allows for extensive logging of channel utilization and other pertinate information.
NOTE: This application requires the Apple's Serial Tool from the Communications Toolbox which is NOW included in the archive.
System 7

<MacAPRS 1.3.1>
MacAPRS is a Macintosh version of the APRS program. APRS = Automatic Packet Reporting System. APRS is used for tracking stations, cars, boats, balloons etc. using Amateur Radio Packet and GPS.
Most current relases area available at ftp.ucsd.edu
/hamradio/packet/tcpip/incoming
If you have questions, you can contact the author, at
akasbb1@peabody.sct.ucarb.com

<DSK_Loader 1.0>
DSK_Loader is the Macintosh equivalent of the DOS program DSKL. With this program you can communicate with the DSK (DSP Starter Kit) from Texas Instruments. This program bootloads a simple communications kernel and then loads other software using this kernel. Other options are: Fill DSK memory with a certain value; Dump DSK memory into a textwindow, for further processing; Execute programs on the DSK; Graph output from the DSK; Act as a dumb terminal to the DSK.
The DSK and thus DSK_Loader is most interesting for people who want to experiment with Digital Signal Processing at low costs. For HAM-Radio operators it is a very interesting piece of equipment, Some applications, like the KC7WW port of the W9GR filters are included.
This program is public domain so you can distribute it to others, put it on BBS's, FTP sides, etc. If you encounter some problem s, bugs, find language mistakes in the help-information (english is not my native tongue), or just want to know me that you use this program, feel free to write to the address below, by email, or just postal mail. Please add information about the system you use, and the application you use the DSK for. I also like to hear your wishes for future versions.
Author is available on the internet: G.Polder@CPRO.AGRO.NL. Gerrit Polder-PA3BYA, Prunus 8, 3904 LV Veenendaal, The Netherlands

*** RTTY ***
<MacTTY>
Decodes Baudot or ASCII transmissions. Can also be used for packet radio and other digital modes (including landline data communications). Includes split screen, a 15,000-character type-ahead buffer, and canned messages. Summit Concepts, Suite 102-190, 1840 41st Ave., Capitola, CA 95010.

<WeFaxWorks>
Weather facsimile terminal program for use with Kantronics TNCs. Kantronics rfconcepts, 1202 E. 23rd Street, Lawrence, KS 66046.

<MacMultiCom 1.0>
MFJ sells MacMultiCom 1.0 for their 1278 multimode controller. MacMultiCom supports all of the modes of the 1278: packet, rtty, ascii, pactor, amtor, gray scale faxes, and many different formats of color sstv. The program requires a minimum of a MacPlus and a hard disk. Requires a color Macintosh and System 7 for best results.
System 7

*** Logging ***
<Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help. SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates. System One

Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 3.5>
Allows real-time or post-contest logging of a wide variety of contests. Checks for dupes, figures scores instantly, and offers various printouts. Interfaces to TNCs for CW and RTTY contests, to DX packet clusters, to Kenwood transceivers, and to MacinTalk for easy post-contest entry. Gerald Eberle, HB9CEY, P.O. Box 13, CH-4417 Ziefen, Switzerland.

<LOGic>
(Macintosh version scheduled.) Lets you define the rules determining dupes (such as once per band or once per contest). Displays heading, distance, and other information about the country being worked. Automatically enters contact time; if interfaced directly to a radio, also enters the frequency, band, and mode. Shows status toward earning amateur-radio awards. User-definable database fields. Exchanges data with other programs. Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!) N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that you can later import into any data base for analysis, etc. It also shows you that just about anyone can use Think C and create something on the Mac! Let me know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA Author is John Seney - WD1V, e-mail address is jseney@aol.com. For a copy of this program, mail a SASE disk mailer and 800K disk to: John D. Seney, WD1V, 144 Pepperidge Dr., Manchester, NH 03103
System 7

<Marathon>
Contesting/logging- Have seen references to (March 92 CQ magazine) and heard good things about MARATHON by N 0 IOS. I believe a demo was available for $8. Last address known is: Kevin Krueger, N0IOS, 1780 Ruth St., St.Paul, MN 551O9

*** Callbook data tool ***
<Hamcall 2.0>
This is the application that is used to support Buckmaster's Hamcall CD-ROM. This application provides much more data than previous versions including lat and long coordinates. Allows search by callsign as well as Zip Code sorts.
More information at info@buck.com
System 7

<SAM>
Amateur Radio Callsign Database now supports Mac interface. No additional information at this time.

*** Propagation, gray line, DX headings *** <DX Map v1.1>
Displays a map of the world with the terminator. Gives location,

prefixes, zone numbers, distance, and heading for any country you select. Freeware. Requires HyperCard 2.0. Available via anonymous FTP from joker.optics.rochester.edu (in the /ham/dxmap directory). Or send a formatted 800K Macintosh disk with a stamped, self-addressed disk mailer to Len Saaf, NV2Z, 52 Raleigh Street, Rochester, NY 14620 (Internet: saaf@joker.optics.rochester.edu).

<SatTrak>
Primarily a satellite tracking program, but also calculates beam headings, Maidenhead grid locations, MUF plots, and band openings. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K or 14.MB Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<Sun Clock>
Desk accessory. Displays a color map of the world, including the terminator. Indicates current time for any location. MLT Software, Inc., P.O. Box 368, Portland, OR 97207.

<DX Window>
Draws a great-circle world map centered on your QTH, with day/night terminator indicated. Displays over 400 DX locations with prefixes and beam headings. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.1>
Enter solar flux and get propagation predictions to desired areas of the world. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.5>
Provides sunlight status at both ends of a path; MUF, F0F2, and FOT frequencies; S/N ratio of the link; and other information. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<DX Helper v1.57B>
Displays beam heading, distance, gray line, and propagation information. Generates great-circle maps. Identifies prefixes, zones, and oblasts. Includes code practice. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98336.

<Mac MiniMUF v5.1>
A greyline and propagation predictor based on the PC version of MiniMUF by K4CFV. It is available directly from him for the price of a formatted disk and SASE (disk mailer). His address in callbook or: Bob Stamper K4CFV, 12510 Shadowrun Blvd., Riverview, FL 33569

<Mac ShortWave v1.2>
A program called Mac Shortwave that figures MUF and LUF. BXA Research in Plano, Texas

*** Satellite tracking ***
<SatTrack v1.02>
Tracks one satellite across a world map as it moves, displays the

instantaneous position of several satellites, or generates tables of all satellites visible from a certain location at a given time. Also calculates beam headings, Maidenhead grid locations, and MUFs. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.
System 7 compatible.

<MacSat v3.1>
Tracks up to 21 satellites simultaneously, either in simulation or real-time mode. Text screen displays ground-track coordinates, range, mean anomaly, visibility (azimuth and elevation) and Doppler shift frequency information for all satellites being tracked. Graphical screen portrays the satellite ground tracks superimposed on a world map. Polar plot displays graphically the precise location of each visible satellite above the observer's horizon. Developed by the Geodetic Research Laboratory of the University of New Brunswick. Available from Richard B. Langley, R.R. 12, Fredericton, N.B. E3B 6H7, Canada (Internet: lang@unb.ca). A demo version of MacSat may be ftp'ed from directory PUB.CANSPACE on unbmvs1.csd.unb.ca.
System 7

<OrbiTrack>
<OrbiTrackFPU v2.1.4>
Calculates look angles to selected satellites, plots current satellite positions on a world map, and displays the visible passage of a satellite against background stars (either within the program itself or via a data file that can be read into the Voyager astronomy program). Please note that one version requires an FPU to operate! BEK Developers, P.O. Box 47114, St. Petersburg, FL 33743. (Bill Bard, CompuServe: 75366,2557)
(Note: This replaces BEK's previous MacSat program, which was not related to the program of the same name from UNB.)
System 7 compatible

<QuikMac>
Macintosh version of N4HY's QuikTrak program. Requires Microsoft BASIC. AMSAT, P.O. Box 27, Washington, DC 20044.

<Satellite Orbit Prediction Program>
Macintosh conversion of W3IWI program. Requires Microsoft BASIC. Send formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Earl Skelton, N3ES, 6311 29th Place NW, Washington, DC 20015. Or send self-addressed stamped envelope for source listing.

<Satellite Pro>
Uses world maps and tables to indicate rising and setting schedules, current locations, mutual visibility opportunities, and footprints. Includes Mercator, polar, and great-circle displays. Optional antenna control. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98366.

<MacSPOC>
Author is on AOL and can be reached as adamod@aol.com via the internet.

The "demo" versions can be found at ucsd.edu.

*** Antenna design ***
<MacMiniNEC>
Chris Smolinski, N3JLY, 40 South Lake Way, Reisterstown, MD 21136.

*** Radio control ***
<ICOM Radio Control>
Provides a Macintosh interface for controlling ICOM transceivers that use the CI-V remote-control system. Lets you quickly change frequencies and modes. Also does logging and duping. Requires a CI-V to RS-422 converter (schematic included with program).
KE6FG Software, 9763 Pali Avenue, Tujunga, CA 91042.

<FreqValet>
Provides frequencies and DX program info for shortwave radio listeners. The program databases update automatically at 15, 30, or 60 minute intervals, thus providing a continuous display of broadcasts on-the-air at any given time in a spreadsheet like format. Features include sorting of data, scanning, and on-screen changing of databases. The program will convert Tom Sundstrom's dBase shorwave broadcast listing to FreqValet format and will do the same for Shorwave Navigator users. Separate cards are provided for DX Programs, Ship to Shore, and Utility broadcasts. Computer control modules are available at extra cost for the Drake R8, Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.
DX Computing, 232 Squaw Creek Road, Willow Park, TX 76087. Telephone (817) 441-9188 or (817) 441-5555 (fax). Author is available via internet: dxcomp@aol.com System 7 with HyperCard 2.1

*** Ham radio BBSs ***
<Digikron Systems BBS>
Various ham-related applications, including logging, propagation, Morse code, and packet. (408) 253-1309.

<N8EMR BBS>
Various ham-related files, including packet, DXing, and contesting software; AMSAT bulletins; and several ham newsletters. (614) 895-2553. Also available via FTP on AMPRnet at 44.70.0.1.

<WB3FFV BBS>
Various ham-related software, including packet, contesting, and Morse code applications. (410) 661-2475, 661-2598, and 661-2648.

<ChowdaNet BBS>
(more info at a later date)

<Gallery's BBS>
Gallery's BBS is now available to the general public.Specializing in Amateur Radio shareware for the Macintosh computer.The board is open 24hours a day,7 days a week at 202-298-6009.Supports up to 9600 bd connections.Give it a call today! e-mail queries to:paulot@cais.com or N3MGA@WA3TAI.MD.NOAM

*** Online Services carrying Ham Radio software ***
<America Online>
Supports Macintosh, PC's DOS & Windows versions, PS/1, Apple //s, Casio
Zoomer. Ham Radio Club (keyword = ham radio) supports all computer types.
Software for amateur radio, scanners, swl'ers and general electronics. For
10 FREE hours of trial time send your snail mail address to
tstader@aol.com or call 1-800-827-6364 Ext. 6285. This site NOT ftp'able
(yet). Internet e-mail.

<CompuServe>
Supports any communications software on most computers Ham Radio area (go
hamnet) supports all types of communications formats. Call 1-800-848-8199
for information. This site NOT ftp'able. Internet e-mail.

<Delphi>
(more info at a later date) Internet e-mail

<GEnie>
(more info at a later date) Internet e-mail

<Prodigy>
Has ham radio message areas, no downloadable software. Limited internet e-mail.

>Date: Fri, 10 Feb 1995 09:15:04 -0400

>Hello everyone you are all invited to the "Best of 75 Net on Suday Night".
>The net will conviene on Sunday evening at 1930 Eastern on 3975khz.

>Last week we had a blast! We had a horse race where the gangs from all up
>and down the band check in. The gang from 3898 won with Bob Cruz
>stretching out his lead in the final minutes. Bob Nelson from Texas on the
>phone patch. Several of the letters written to the FCC, Congress, and the
>Senate were read over the air.

>This week we plan to have an even better time. Fred Maia W5YI of the W5YI
>Report will be with us at 2100 eastern. Fred is going to be answering
>questions pertaining to the latest on the Glenn Baxter broadcasting vs. the
>FCC. It seems there are a few unanswered questions that have some
>interesting answers.

>Fred has some information about the vanity call sign issues as well. Fred
>and his Washington reporter Bennett Kobb have been interviewing within the FCC
>this week and we will have the info for you Sunday evening on the net.

>If you have some questions you would like to ask Fred you can check into
>the net Sunday Night or you may leave them for me at my email address.

>See you on the Radio

>DonDon

>you can
Best of 75 Net will meet every Sunday Night on 3.975 mhz. at 19:30 eastern. Please check in and help stand against the one way broadcasting on the Amateur Bands.

Check ins start at 19:30. There is a HORSE RACE with all of the major groups participating from up and down the band. Check in and win the horse race for your group.

Anyone can check into the net. A big signal is not required but sure does help. All are encouraged to be there.

Sunday night 2/12/95, W5YI Fred Maia will check in. Fred is the editor of the W5YI Newsletter. Fred will be answering questions concerning :
1. The interferrance by K1MAN and what is being done about that at the FCC.
2. The New Vanity Call sign issues. How to get one.
3. Other topics of amateur radio.

Upcoming guests will include

Wayne Greene of 73 magazine. Topics could include just about anything.

Mark Holmes KJ4ZO. Mark is the manager of one of the leading Amateur Radio retail stores in one of the major markets. Mark will answer questions on product availability and failure rates.

We have other folks that will be acting as our guests. So please show up and offer your support. We need you.

If anyone is interested in aquiring suggested letters to FCC or Senate/Congress, please mail me a SASE at:

The following is a QST

Tech class hams have taken the lead position in ham radio
licensing, more on the ARRL sponsored meeting of repeater
coordinators and a big announcement about Newsline's Young
Ham of the Year Award. It has a new home. Find out where on an
extended Newsline report number 913 coming your way right now!

(*****
STARTLING STATISTICS

Technician class hams are literally on their way to ruling the world of Amateur Radio in the United States. This according to some startling 1994 year end statistics recently released by the FCC. The commission sez that forty percent of all radio amateurs licensed by that agency hold Technician or Technician Plus licenses with the Tech Plus leading the no-code Techs by a slight margin. Put into numbers, this means that some 186,000 of the estimated 250,000 hams in the United States and its possessions are Technician class operators, with up to 5000 new Techs joining the ham radio ranks every month.
Even more startling is the overall increase in the total growth in ham radio over the last ten years. We are up a bit over 62% from where we were in 1884. An increase of almost 250,000 from the half million figure the FCC's licensing computer put out a decade ago.
Looked at in dollars and cents the numbers are really astounding. If each ham licensed today were to buy only five hundred dollars in equipment over the next twelve months, the net income to the ham radio support industry would be in the order of $375,000,000 -- that's million dollars. More realistically, if only 10% of that figure or 75,000 hams spend $500 on gear the net to the industry by this time next year that would be $37,500,000 or there about.

(*****
ELECTRONIC FILING UPDATE

We have an update on the status of electronic filing of license applications. According to ARRL VEC Administrator Bart Jhanke, KB9NM tells us that Newsline #909 has an incomplete quote regarding the ARRL VEC's handling of electronic Form 610 application filing.
Bart says that the complete information is that, regardless of whether a VE team enters application data and mails or Electronically mails that data to the ARRL VEC, he must still receive the actual hardcopy Form 610 applications and hardcopies of other pertinent test session documents, and must screen them, before he can forward the successful applicant data electronically to the FCC. Bart emphasizes that the ARRL cannot simply bounce data received from a VE team to the FCC without screening the exam documents first.
KB1NM also says that electronic filing is now very alive and well for two of the 18 VEC's. Five more VEC's will be coming on board in the near future.

(*****
NEW ASTROHAMS FOR STS-67

And electronic filing of license applications has resulted in two more U.S. astronauts joining the ranks of Amateur Radio

licensees. Both will fly aboard the Space Shuttle Endeavour during mission STS-67.
The two new astrohams are Pilot William Gregory, KC5MGA and Payload Commander Tamara Jernigan, KC5MGF. Both took examinations with ARRL volunteer examiners on January 19 and were issued call signs on January 25.
The 16 day STS-67 mission is scheduled for launch in March. Six of Endeavour's seven crew members now have Amateur Radio licenses. School groups in 26 places around the world are scheduled to make voice contacts with the STS-67 crew using the Shuttle Amateur Radio Experiment radio system to communicate.

(*****
ARRL HELPS DISABLED

Some good news for handicapped hams. Word that the new ARRL Sourcebook for the Disabled is available in electronic form from several sources. This includes Compuserve, America Online, the ARRL's own Hiram BBS, and the InfoServer via Internet at info@arrl.org. The Sourcebook describes sources for those helping the disabled both with licensing and operating needs. It's development and publication was funded by the ARRL Foundation.

(*****
HAMS WIN IN REALLOCATION

In Los Angeles word that ham radio is the biggest winner in the FCC's reallocated 50 MHz of spectrum, including 2390 to 2400 and 2402 to 2417 MHz, from government use to unlicensed, low power devices. This is because the commission has also elevated Amateur Radio's status in those band segments from secondary to primary. This means that amateurs will no longer have to protect any other user of those bands, and amateur stations are entitled to protection against interference from other users.
Looking at the specific allocations, the Commission has made 2390 to 2400 MHz available for use by the unlicensed Personal Communications Services. It has also provided for continued use of 2402 to 2417 MHz by traditional unlicensed Part 15 electronics. This includes wireless networking and data transfer devices, with everything being governed by the same rules that apply to devices operating in the 1910 to 1920 MHz band.
But the important news for hams is that our service is now the primary user. In case you did not know, you can thank the American Radio Relay League for making this big win for ham radio take place.

(*****
ARRL REPEATER MEETING

More information is now known about the ARRL's decision to hold a meeting of the nations repeater frequency coordinators. According to the minutes of the January 20th Board of Directors

meeting, the stated purpose of the meeting will be to discuss several key points with coordinators. These include establishing what the ARRL calls a single point of contact between the FCC and the coordinators through which the commission would recognize and support both local and regional coordination efforts. In simpler terms, what the ARRL wants to know if whether or not the nations coordinators are willing to take their problems and complaints to the League instead of the FCC in much the same way as the ARRL's Amateur Auxiliary handles the investigation of other kinds of regulatory violations.

And there is good reason for this. As Newsline learned late last year, a ham here in Alabama who was asked to vacate a repeater contacted the FCC to find out if barring him from the repeater was legal. He was basically told that the FCC is sick and tired of hearing what it considers the whining and petty complaints of repeater owners and users. The commission does not have the resources nor the interest to handle what it views as petty complaints. As a result, a fairly high ranking FCC official told this ham that if ham radio could not solve these problems with repeaters, they definitely would not like the action taken by the FCC.

If we know this, the ARRL has to know it too. And if becoming a buffer between the repeater problems and the FCC is a way of avoiding some hard handed re-regulation, the ARRL appears to be ready to take on the job. A job that most repeater people will tell you that the ARRL has avoided for almost three decades.

But there is a lot more on the agenda than just buffering complaints to the FCC. Also to be discussed will be setting standards for service by coordinators, how appeals of coordination decisions should be handled, establishing a method of recognition and succession of coordinators and how frequency coordinators should respond to the needs of new technologies coming to ham radio in need of spectrum.

Finally, the League will also use the meeting to determine the level of support among coordinators for a return to separate repeater licensing. This is something many coordination councils have been wanting for a long time. Also, the ARRL wants to determine the extent to which coordinators should be involved in accommodating the needs of other modes and if coordinators should attempt to resolve interference between repeaters and other types of amateur operations.

While no date or location for this meeting has yet been announced, it is beginning to look as if the outcome of this gathering may well impact on more than repeater owner operators and their frequency coordinators. Decisions made at this meeting will assuredly lead to regulatory changes that will affect the day to day operations of the majority of the nations radio amateurs, most of whom operate on repeaters every day. This means you!

(*****
W1ALT BECOMES SILENT KEY

Some sad news. Word has just been received of the passing last summer of Frank Caswell, W1ALT in Beverly, Massachusetts. Caswell was first licensed in the 1920's. He spent much of his spare time collecting, recording and documenting the history of the Marconi Wireless Station on Cape Cod. He also built the replica rotary spark gap and model of the Marconi station that are on display at the headquarters of the Cape Cod National Seashore at South Wellfleet.

(*****
NEW PHILIPPINES PREFIX

From overseas, the DX News Letter reports that the Philippines began to issue its new 4E7 prefixes as of January 1st. So far there have been no contacts reported on this new prefix, but VS6VW reports hearing SM0CNS/4E7 active on 160 meters.

(*****
NEW SATELLITE COORDINATOR

The International Amateur Radio Union International Secretariat has announced the appointment of Bruce Lockhart, SM0TER as the new IARU Satellite Frequency Coordinator. Bruce main task will be to provide a service to enable any group to coordinate frequencies and emissions of a planned amateur satellite with existing and any other planned amateur satellites. The appointment was made after consultation with major AMSAT groups in Europe and North America.
While this is a technical position, the IARU Satellite Frequency Coordinator also has an important role in assisting in the protection of bands allocated to the amateur satellite service. Bruce will work closely with the IARU Satellite Adviser, Hans van de Groenendaal, ZS6AKV.

(*****
DX

In DX word that Frank Smith known as AH0W and OH2LVG, will be active in early March from the Northern Marianas Islands and from Saipan. His planned operation includes participation in the ARRL SSB DX Contest as a single op entry. Frank will also stop for a few days on business in Malaysia and will activate East Malaysia. Both operations will be on 20 meters and WARC bands. You may remember Frank as one of the operators of the XF4M DXpedition to Revillagigedos back in October of 1994. There is another story about the aftermath of that operation which we will have for you in a future report.

YHOTY AT HSV

Newsline in association with Yaesu U.S.A. Corporation and CQ Magazine is proud to announce an agreement with the Huntsville Hamfest Inc. for Huntsville and the Hamfest to become the permanent home of our "Young Ham of the Year Award."
For those of you not aware, the Huntsville Hamfest is one of the nations largest and most popular Amateur Radio conventions. It is held at the Von Braun Civic Center in downtown Huntsville and attracts some 7000 attendees each August. And this year, it will probably be even bigger since it has been designated as the official site of the ham radio industry's national show.
Besides being one of the nations friendliest places, the city of Huntsville, Alabama has many attractions of interest to young people including the nearby Marshall Spaceflight Center and NASA's Spacecamp. And the youngster selected as 1995 Young Ham of the Year will receive an expense paid trip to Huntsville and the Hamfest along with possible other gratuities courtesy of Yaesu U.S.A. Corporation. This includes transportation to Huntsville, hotel accommodations, admission to the Hamfest and banquet.
And while in Huntsville, the winner will also be treated to a V.I.P. tour of the Spacecamp facility and the Marshall Spaceflight Center. This, courtesy of CQ Magazine. Then on Saturday night August 19th he or she will be presented the 1995 Young Ham of the Year Award at the Huntsville Hamfest Grand Banquet, hopefully making it an experience that some deserving young radio amateur will never forget.
As we have said before, the nominating period for 1995 "Young Ham of the Year Award" is now open any continental United States radio amateur, age 18 or younger holding a valid FCC license. Nominees will be judged on the way in which they have used ham radio to significantly contribute to the benefit of the Amateur Radio service, or to the state of the communications art, to their community or the nation.
All nominations must be submitted before April 30th, 1995 on an official application. These are available for a self addressed stamped envelope to the 1995 Young Ham of the Year Award, c/o Newsline, 28197 Robin Avenue, Saugus, California 91350. These nominating applications are also available electronically with an E-Mail request to: BILLWA6ITF on America Online; B.PASTERNAK on GEnie or billwa6itf@aol.com via the Internet.
The Huntsville Hamfest takes place the weekend of August 19th through the 20th. Many of the members of the Newsline staff will be there. We hope you will be there too.

Well using a tuner shouldn't throw RF all over the shack. Try a 1/4 wave
counterpose. Watch out as the end will be hot RF wise. Using a remote
tuned tuner at the feedpoint of the antenna might be another option.
There are some designs which claim to be brodbanded. You can use multiple
elements on a centerfed dipole cut for 3.9 3.8 3.7 ect. I've never tried
this but some claim it works well. What you have to remimber is that 80
meters is .5 meg wide. To get one antenna to cover 3.5 to 4.0 is the same
as trying to get on antenna to cover 14 to 16 meg. The bandwidth as a
percentage of frequency is very high. An antenna cut for 3.9 ought to
work from 3.8 to 4.0 with a tunner without much trouble.

Source record: 252211

I received the HTX-404 for christmas and was wondering why everytime I tell another Ham that this is what I got they give me a funny look and tell me I should of got the HTX-202? Is there something wrong with the 70cm band or something? I wanted the 404, because I read an article that was saying how crowded the 2m band was and how alot of people are going over to the 70cm, so I thought the 404 would be the better radio for the future. Was I mistaken? I would apreciate anyones response to this issue. I am new to ham radio so I don't know as much as most of you.

Thanks.

>
>Lost cause.

Not worth spending the price of a stamp you reckon? To borrow a line from
a letter to the Sydney Morning Herald this week, if 4,000 woodchip
workers can change Paul Keating's policy on woodchipping, why can't
18,000 Amateurs have a similar effect?

(Answer: because so many can't be bothered to get up off their backsides
and write a letter of protest)

>I urge all amateurs to hit the SMA where it hurts.
>
>
>If you can afford it take legal action against them.

No, target their bosses, i.e. the politicians, who aren't fully aware of
the "instructions" they have "given" their employees.

(With all due respect, we in VK2 have had quite enough litigation, thanks)

>If you can't afford that, do it my way, simply refuse to renew your license.

Yeah, be a pirate - that's very constructive Graham.

>
>Some have said that this is exactly what they want :-) Ok they've got it.
>I simply refuse to pay $70 odd bucks for what is a hobby, and not a very
>good one anymore anyway.

It's only as good as you make it, you know. Anyway, there's always CB,
which is now free of licence fees. Have fun.

>Everything once possible over AR has now been replaced by the Internet.

Send me email from a cave, from a hot-air baloon, or while in freefall from
10,000 feet, and I'll maybe I'll give up AR too.

I hope not every Amateur is so apathetic.

73 Richard VK2SKY

PS I don't seem to be able to find any Broadbridges in the callbook (last year,s admittedly). Can we take it, Graham, that you're not really a licenced Amateur, or are you just giving up after only a year?

The UC Amateur Radio Club (W6BB) email addresses are:

hams@violet.berkeley.edu :A limited mailing list for club officers
and a small bunch of hams who actually
like a lot of email.
Used for in-house missives.
>>>> Please mail here for club information <<<<

w6bb@violet.berkeley.edu :To members and interested hams at large.
Used for general club announcements.

Anyone remotely connected to UC Berkeley -- students, staff, alumni,
local residents, or anyone who has seen a Berkeley postcard (San
Francisco postcards will not do) -- are invited to stop by or
drop us a note. We will even process membership checks for the
Stanford U. ARC at no charge (make checks payable to ASUC/UC-Amateur
Radio Club - expect a short transfer delay of 8-10 years - email
me for details).

Bear's net: Every Wed and Fri @ noon - 146.43 MHz simplex (preferred)
or 440.90 MHz + pl 114.8

W6BB will also be participating in the School Club Roundup next week.

I tried to get the ARRL list of repeaters from the ARRL but they said
they were not allowed to release the repeater info as part of publishing
the list. Apparently the repeater coordinators regard the location
and frequency of the repeaters as proprietary info. The only way I could
get the info I was told, was to go to every repeater coordinator in
the country and make agreements with every one of them separately.

Naturally I declined.

What have you guys done to get these lists that I didn't?

>I am planning on putting my 2 meter/7element beam above a 70cm 12 ft boom
>length yagi. What is the proper spacing between them to minimize
>interaction? Thanks for any information anyone can provide.

To a first approximation, they are far enough apart in freq that they
won't interact, ie you could almost tape the booms together (neglecting
effect of the fatter 2m boom on the freespace around the 432 elements).

To be extra sure, you can calculate the capture area for each
yagi. The 432 one willhave a capture area of about 4'x4', ie it doesn't
interact with anything further than 2' in each direction from the boom.

My guess about the 2m beam is that the capture area extends 3-4'
from the boom. So 4' separation and they won't know anything about each
other.

I have my 432 (4x15 elements) and 2m (2x15 elements) sitting
in each other's capture areas and I can't tell the difference SWR wise
or pattern wise.

reserve of the State of California.

RB365 for release 2/13/95
SUBJECT: MGT - POLICY - NEW WORKER'S CHECKLIST PT 2/2

Continuation of a supervisors checklist for new workers -- both
paid and unpaid. It was suggested in RB 364 that particular
attention be placed in applying these guidelines to the unpaid
staff to help improve the ACS/RACES organization.

6. Show him/her the layout and available facilities:
____ Explain the layout of the offices as well as the branch and
unit to which he/she is assigned.
____ Show him/her the washroom, water fountain, elevators, soft
drink machines, coffee, duplicating machine, and/or other
relevant facilities.
____ Security briefing on restricted and prohibited areas.
Building security rules. Doors and gates.

7. Explain rules and regulations:
____ Hours of work.
____ Periodic staff meetings. Exercises.
____ Smoking.
____ How to answer the telephone.
____ How to place telephone calls. Describe systems available.
In addition, for paid workers:
____ Punctuality and good attendance.
____ Lunch period.
____ Rest periods.
____ Use of telephone.
____ Leave

8. Job instruction, or assign to qualified instructor:
____ Give step-by-step instruction if necessary.
____ Explain quality and quantity of work standards.

____ Assign his/her work area.
____ Describe availability of future training and assistance.
____ Provide the new worker all necessary job descriptions,
handouts, plans, policies, procedures, learning aids and
any other materials that will enable the worker to grasp
the team approach.
____ Explain the use of office equipment (computers, copy
machine, etc.)
____ Stress safe working habits and practices.
____ Stress security aspects of the job, if applicable.

9. Follow up:
____ Check frequently on the new worker's progress.
____ Encourage him/her to ask questions.
____ Make corrections and give encouragement.

INFO: AMATEURS U.S (@USA: INFORMATION), CAP, MARS, RACES
FROM: AUXILIARY COMMUNICATIONS SERVICE (ACS) of the Governor's
Office of Emergency Services; the volunteer communications
reserve of the State of California.

RB 363 for Release 1/30/95
SUBJECT: OPS-TNG - Double teaming

Training can only go so far in the classroom. Some aspects and
experience can only be achieved on the job. One way to do that is
with a practice that is called double teaming.

Double teaming is the process of putting a less experienced
person to work with an experienced one, particularly in
operations, installations, and technical work. This enables the
lesser experienced (or new person) to show their stuff under
fire, be evaluated under pressure, and sometimes step up into the
role of a more responsible position.

An excellent way to double team is in packet operations. Its
a natural because it seems there are never enough prompt,
experienced packet operators with transportable packet
terminals. It's really imperative that a second operator be
ordered up. A typical forest fire day starts at 5:30 a.m. and
may run to 8 or 10 p.m. for most communications people. Radio
and packet operators need relief under such stress and long
hours. Virtually every position, from communications officer or
shift supervisor to net control operator can be double teamed
where space allows. The process can be extended to virtually any
position in or related to an emergency communications unit;
actually, any job in the EMA itself! Try it, you may like it far
better than you at first may think possible!

Actually, the process of one-on-one teaching -- by showing,
leading, invoking interest in and ability to expand and grow in
usefulness, actions and abilities, is a time honored process
that has been proven in many ways. In one sense it's rather
like a modern day equivalent of the master/apprentice process,

but molded to fit a different time and situation. Stated in another way, it's friend helping friend.

True, you can function without double teaming but you aren't doing your "second string" any favors. Don't you want them all to become first string personnel? What better way to help them along the way?

Signed Stan Harter, Auxiliary Communications Service program coordinator, State of California.

RB364 for release 2/6/95
SUBJECT: MGT - POLICY - NEW WORKER'S CHECKLIST PT 1/2

Adopted from industry, the following supervisors checklist for
new workers can apply to government workers -- both paid and
unpaid. It is suggested that particular attention be placed
in applying these guidelines to the unpaid staff.
They can only help improve your organization.

1. Get ready to receive the new worker:
____ Assure that the written application is complete, law
enforcement check successfully accomplished, photographs
taken and I.D. card processed.
____ Review his/her work experience, education, and training.
____ Have an up-to-date description of his/her job or a list
of duties.
____ Have his/her workspace and supplies ready.

2. Welcome the new worker:
____ Put him/her at ease.
____ Indicate your relationship to the new worker.
____ Define who is his/her immediate supervisor.
____ Assign him/her to desk, operating position, work area, or
site and supplies.

3. Show genuine interest in the worker:
____ Discuss his/her background and interests.
____ Inquire about his/her transportation. Is it suitable for
field assignments if necessary?
____ Review work related tax deductions, particularly for
unpaid workers.

4. Explain the work of the unit, using organization/functional
and position/personnel charts:

____ Describe the function.
____ Indicate his/her position in the unit.

5. Introduce him/her to the chief of the unit and his/her coworkers:
____ Indicate to each coworkers the new worker's duties.
____ Explain the duties of each person to whom he/she is introduced.

such as a credit union conflict with FCC Amateur Radio Service
rules?

Reply: The FCC rules do not apply to Amateurs for the use of a
credit union by participants in a county benefit program as a
result of a RACES program in and by that county. What it does do
is to seek to prevent Amateur licensees from using the Amateur
Radio Service FREQUENCIES incorrectly. It's not the Amateur
LICENSE per se that the FCC is interested in, it's the improper
use of Amateur Service FREQUENCIES it wants to avoid; i.e.,
pecuniary interest or pay for use of the AMATEUR frequencies
(or any use of other frequencies improperly.)

Incidental benefits -- such as the optional use of a credit
union, or an employers continuation of one's salary, and
provision of workers compensation or insurance coverage for
disaster service workers -- are not a violation of the FCC rules.
None of this conflicts with a FCC regulation because the pay is
incidential to the work, not in compensation FOR the use of the
Amateur Radio Service frequencies.

Other examples include compensation for mileage, lodging and
meals by a jurisdiction while doing emergency response work.
Likewise, hundreds of licensed amateurs operate equipment on
either business or government frequencies with no difficulty from
the FCC. Again, it's not the license, but the use of Amateur
frequencies that is the issue.

An interesting paradox is the one where private or government
employees can be released from their jobs to assist IN AN

emergency and continue to receive pay while they are at the volunteer disaster work. As a result, some ACS/RACES people may actually receive salaries from their employer while on duty operating on the Amateur frequencies during an emergency. Unfortunately, there are people highly perturbed at the fact that they are unpaid while they work alongside others who are paid for their time while doing the same emergency response work. However, the problem really isn't the situation, but what they THINK about it. It disturbs them for one or more of several reasons, one of which could be that they'd like to have the same "goodie", which some would describe as envy.

Amateur Radio participants who cannot raise their mental standard of acceptance and participation above that of miscontent over such factors don't belong in the unit. Terminate or discharge them! They may not like that, but it's best for the overall morale of the unit; and in a way, it has a chance of helping that person in ways he or she may someday discern.

>like "The Maidenhead Grid Locater". It is quite thorough in explanation,
>along with complete maps of the world. It has nothing to do with
>virginity though. -- Phil, AA8JO.
5~
Maidenhead - a most unfortunate name, it must have been named in
a different ago. That was the location of the meeting place where
the system was agreed upon. I notice it's called just plain
"grid locator" here.

How it works - the world is divided up into 2deg x 1 deg "squares"
(the oblong shape of the "squares" comes about because even though the
earth is the same shape in all orientations, it is 360deg
around the middle and 180 from top to bottom). This gives you the
first two characters (EN). The big squares are divided sensibly into
1/10ths, ie 0.2x0.1 deg squares giving the "57". Then, in the
spirit of trying to get away from the horrific
predecimal disaster of deg/min/secs, the "57" square is divided
into 1/24ths (you were expecting 1/10ths again - are you crazy?)
the obvious 0.008333x0.004166 deg square giving you the "rc"
part of your locator (usually lower case).

So you just have to know your lat/lon in multiples of
0.004166 deg and there you have it.

(mutter mutter, alright so its 30 mins of arc. Still,
it's a real pain coding to handle data that's in deg/min/secs and
we shouldn't have to use a system like that anymore.)

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,uk.radio.amateur,rec.radio.amateur.digital.misc

To all who tried to access the Kentrol Web pages last week and got an error message: Please come back; it's working now!

My Internet provider had a major crash on Feb.5, and the Web server was out of action until Feb.10. The crash was just a couple of days after the release announcements for Kentrol 5.0 and SkedMan, so lots of folks have been denied the opportunity to see just how good computerized rig control has gotten.

All is well again so you can read about, preview and download the best in hamware with this URL:

http://www.synapse.net/Kentrol/Kentrol.html

There is also an archive of Kentrol and SkedMan executaables and documentation accessible by anonymous ftp, located at:

ftp.synapse.net/shareware/kentrol/

We're glad to be back.

In article <D2v84G.10A@swcp.com>, Jay Miller <miller@swcp.com> wrote:
)Just read the "Albuquerque Journal", Jan. 23, 1995 & low and behold an
)article from some University Telecomm Expert saying the Internet is
)replacing Amateur Radio in emergency communications, siting several
)instances during the earthquake in Kobe. First , the landlines were down,
)into & out of Kobe. The Official Japanese (Radio Japan-English Broadcast)
)statements (paraphrased) was that this was an internal problem & they
)would handle the rescue efforts. Sure there were some SAR Dog Teams
)enroute, however, even the Internet was Kaputt, directly into the
)affected area.

Ummm. The University at Kobe has been up all along. Their Internet connection survived, and they were able to get a web site up with pictures of the goings on, and so forth.

In the California quake (most recent one) the Internet lines were generally still up. Perhaps hams should look upon this as an opportunity, and use the net, where still up, as a medium for Heath and Welfare traffic. VHF and UHF radio for tactical use in the affected area is quite helpful. Long haul HF for traffic handling is of questionable use in a situation like Kobe. VHF and UHF channels (or 75/80 meters in a pinch) are adequate to reach outside of a relatively localized disaster, and from there the normal phone lines and network resources can be employed.

)Next, with over 1.5 Million Hams in Japan, why would they
)need anyone's help, outside of Japan ? Health & Welfare messages are
)prioritized, mainly outgoing first, incoming is much later & the last
)thing You need is thousands of non-Japanese speaking Personal, within the
)affected area, because they too, could become victims. OK , You flamers,
)ignite Your' torches & let's see some intelligent verbage around this
)subject. I don't see Internet as a competitor, I see it complementing.
^^^^^^^^^^^^^^^^^^^^^^^^

Precisely. Hams are generally effective COMMUNICATORS. It does not matter what mode of transport is used for those messages, not what radio frequency network, or whatever. Use what's available and IMPROVISE! That's what we are supposed to be good at.

)We need to educate these People within the Media, that we all have the very
)same end goal. To assist , when called upon, during an emergency. hey,
)telephones have been around for about as long as radio, and it is not a
)competitor.

Don't believe it!
1. The DJ180 is not just a 2 meter rig. As shipped it receives from 137 to 174 MHz.

2. I modified one for a friend and it works just fine. Alinco runs a wire near the battery interface and it is the only wire around. Cut that wire and the rig will transmit on all above frequencies. Wonder why they ran that wire there so conveniently?

The DJ-180 is a very nice uncomplicated radio. I bought one for my wife. Since this radio like many others that have wide band reception and gather a great deal of intermod, I like the tone decode feature that comes standard. The only thing I miss (and not much) is a reverse frequency switch to check repeater inputs. I have three other friends that own the DJ-180 and they are also pleased.

: Would you care to elaborate on this comment?

Why?

It's quite clear from the WIA on-air behaviour.

: >Lost cause.

: Not worth spending the price of a stamp you reckon? To borrow a line from
: a letter to the Sydney Morning Herald this week, if 4,000 woodchip
: workers can change Paul Keating's policy on woodchipping, why can't
: 18,000 Amateurs have a similar effect?

How many woodchip workers are there. Have you even bothered to attempt to
calculate 4000 as a percentage of the whole group?

: (Answer: because so many can't be bothered to get up off their backsides
: and write a letter of protest)

Exactly.

: >If you can't afford that, do it my way, simply refuse to renew your license.

: Yeah, be a pirate - that's very constructive Graham.

Your 'read between the lines message editor' is doing overtime. I in no
way promulgated pirate operations. Read what I said.

: >Some have said that this is exactly what they want :-) Ok they've got it.
: >I simply refuse to pay $70 odd bucks for what is a hobby, and not a very
: >good one anymore anyway.

: It's only as good as you make it, you know. Anyway, there's always CB,
: which is now free of licence fees. Have fun.

No, it's what others make it. Tried listening to 2m recently? Now have a
listen to the deafening silence on 70cm and 23cm. It's not me killing the
hobby, it's the apathy of many others. FYI, I am setting up a 9600 bps
packet internet gateway on 70 cm, so I'm doing my part.

: >Everything once possible over AR has now been replaced by the Internet.

: Send me email from a cave, from a hot-air baloon, or while in freefall from
: 10,000 feet, and I'll maybe I'll give up AR too.

This is already possible in quite a few areas using commercial telephone modems on cellular radio. In a (very) few years it will be possible from anywhere on the globe using direct satellite feeds to mobile phones.

: PS I don't seem to be able to find any Broadbridges in the callbook (last
: year,s admittedly). Can we take it, Graham, that you're not really a
: licenced Amateur, or are you just giving up after only a year?

Well, you've obviously not looked very hard :-) I'm certainly in last years call book, and have been in every callboook since I was first licensed in 1981. This may possibly be the last year though, if the new fees go through.

>thought the 404 would be the better radio for the future. Was I mistaken? I
>would apreciate anyones response to this issue. I am new to ham radio so I
>don't know as much as most of you.

70 cm is a wonderful band, but depending on the part of the country
in which you live, it can be a closed and hostile world, or a warm
and welcoming one. The repeater culture really is different in different
parts of the country. In California, you'll find almost all of the machines
closed. Here in the Southeast, you'll find a warm welcome.

Two meters is becoming crowded compared to 70 cm, though neither band
is anywhere near full. Traditionally, 2 meter repeaters have tended to
be basic club machines, either open to all or open to anyone who wants
to join the supporting club. On 70 cm you'll find more machines erected
by individuals or small groups for their own purposes. In some areas,
you won't be welcone. In other areas you will. It would have been a
good idea to talk to a bunch of the locals first before making your
purchase. 70 cm activity and friendliness varies a lot by locality.

Hi Russ,

I have the same TNC & Software.... I cannot use the SSTV part of it.....
it doesn't like my video card.... they are using something "hardcoded" for
other than mine.... I have a Genoa, TSENG 1mb 16.7m color video.....

As to the COPY PROTECTION..... I'm not sure of the purpose myself,
especially, since you can install it on you machine, then send in the
disks, and THEY will un-copy protect it for free..... Seems like a silly
waste of time..... Especially, when there is nothing to write home about
with this software.....

I've since reverted back to TELIX to control it..... The only thing I
lose it the SSTV functionality....
Consider that, or your favorite landline comm software as an
alternative.....

Yes the tapes are a wonderful idea!
You will both begin to recognize Morse as a seperate Aural language
rather than a translation of your native tounge. You may wish to contact
a group called handi hams that can help with talking radios for your son.
I believe that the Kenwood 850 does this already (give freqs etc) in code.
Also make sure the VE team you go to test with is and will be
understanding of your sons special needs what ever they may be.

Good luck
GC

Anti-ham bias in media? No, I don't think so. I'm a newspaper editor and it has been my observation over the years that far too many editors simply don't have a clue as to what ham radio actually is. There's confusion with, ahem, CB radio and myriad other radio-oriented outlets. I've found that when an editor actually realizes what we as hams do, he or she is more than eager to jump on the story. Before casting aspersions on the media, let's ask ourselves whether the major ham organization, the ARRL, does an acceptable job of providing the media with the "story" of ham radio. I don't think it does, but, in all honesty, it's a big challenge. As hams, we all know what great and wondrous folks we are, but to the average city editor or news editor working on a story in which ham radio is somehow involved, it's all totally obscure and very confusing. If local ham radio clubs made an effort to visit their local newspapers to have a chat with the editors, things would likely improve. It's easy to blame the press for everything, but it's also usually wrong.....

Out of the empty ether, the cold void of space, comes a voice... a desperate voice, exclaiming his admiration for his fellow man. A constant in this unpredicatable universe we call home. This voice, known to some, unknown to many, screeches from his microphone..."Herbie-baby number one!" <grin>

If it didn't tarnish our image as US hams it would be pretty humourous. I would like to be paid the dollar amount of all the energy used on that frequency to play these games. I'd be in the Virgin Islands soaking up the sun for sure!

Just a random piece of gray matter flowing to my fingers...

it's also important when you get a meeting, to not get tied up in the
personal problems people may have with the paper. over the years, i've
seen people complain that their activity isn't being covered..but then
you investigate and you find out the organizers didn't even send out
a notice until a day or two ahead..and of course, they write to complain
about lack of coverage plus gripe about the way the news in general is
covered.

Just post it in rec.radio.swap or in this group. Some people will complain about posting for sale or trade in this group and in rec.radio.amateur.equipment but I enjoy reading such posts and I see plenty in both groups. I have gotten several good deals from postings here and hope to get many more. Keep it in good taste and ham or radio related and ignore the "net police". Looking forward to seeing your post. 73

David:

I have three (3) such programs, all of which will run under QBasic which comes with MS-DOS 5.0 and above. You are welcome to all/any. I'd include them here, but I don't know the mail group's rules on posting program code. None are all that long, I don't think, but I don't want to run afoul of the moderator. Maybe someone will let me know and I can post them a bit later, if you are interested. Otherwise, I'll be happy to send you a diskette containing the programs, both source code AND compiled into stand-alone .EXE files, if you will send me your mailing address.

Be sure the mention what you want in any reply... I have a REALLY SHORT memory... too much RF...!

2011. Gin Pole, how to use?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-12 23:08:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.23975.7585.0NFB9286@woodybbs.com>
Source record: 252111

BO>What is a gin pole used for and how does one use it?

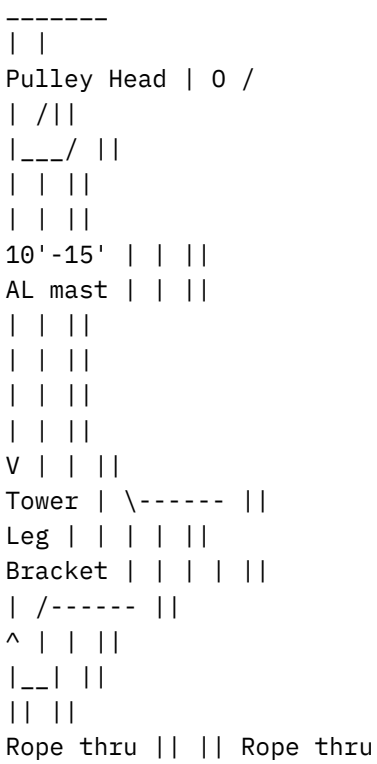
A gin pole is, basically, a 10'-15' mast (usually aluminum) with a pulley at the top and a clamp bracket at the bottom. The clamp bracket is designed such that the mast can be slid up/down within the bracket and secured at any position within the bracket (e.g. at the bottom, the top, or anywhere in between).

The Gin Pole attaches to a leg of of your tower. When it is attached to a tower leg (at the TOP of the topmost tower section) , the mast is normally in its 'lowered' postition. Once attached to the tower leg, the mast is raised and secured from dropping back down thru the bracket.

Once in position, AND with a heavy rope fed through the pulley, running down to the ground (both ends!), the next section of tower is attached to one end of the gin pole rope and workers on the ground pull the tower section up to the top of the tower where the tower man places the section into position. You reverse the process if you are disassembling a tower.

The gin pole makes tower installation a LOT less of a drudge. It also makes it easeir for you to retrieve that socket wrench you just dropped!

Hope this helps.



mast to gnd || || thru pulley to gnd

ST>The standard is to wire the paddle to send dits with the thumb and
>dahs with the finger. So for a right-handed person dits are the
>left paddle and dahs are the right. For a lefty, it is reversed.

ST>Did anyone ever produce a left-handed semi-automatic mechanical
>keyer (bug)?

Yep... I'm a 'lefty' and been using a keyer (AND bug) wired "righty" for
30+ years now... wouldn't have it any other way!

If you're a lefty, and learn to send lefty, then you'll not have much
luck sending with the other 70% or so of the hams who have righty-wired
paddles or bugs!!!!! Learn to send righty with your left hand, if
you're left-handed and enjoy it. It's no different than learning to
send lefty since you've not developed any bad habits (or dependencies)
yet.

Then, once you become 'comfortable' with sending lefty with a right-
handed paddle/bug, teach yourself to send with your right hand, too...
Takes time, but then you can send righty and continue to write with your
left hand without changing from paddle to pencil.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 FEBRUARY AND FORECAST FOR 13 FEBRUARY - 15 FEBRUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 11 Feb
Daily Proton Fluence >1 MeV: 4.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.8E+06 (normal)
X-ray background: A5.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Feb 14 Feb 15 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Feb: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 11 Feb
Learmonth 19 4224 3443
Fredericksburg 16 20
Planetary 20 20

Observed Kp for 11 Feb: 2253 5333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Feb 18 Active
14 Feb 12 Unsettled
15 Feb 10 Quiet to unsettled
COMMENT: Active levels expected again for today, then declining to
unsettled.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
12 Feb normal fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Feb normal fair poor
14 Feb normal normal fair
15 Feb normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
12 Feb -13 about 15% below predicted monthly values

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
13 Feb 5 Depressed 10 to 15%/near predicted monthly values
14 Feb 15 Near predicted monthly values
15 Feb 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 5 was issued on 11 February
and is current for interval 11-13 February. MUFs at Townsville were
depressed early in UT day then recovered. Hobart MUFs were depressed
15-30% all day, yesterday. Depressed conditions are not expected
today for Northern Australia comms. Mild depressions are possible
for first half of UT day today for southern Australia region.

```
ST>but what I'd really like is something with pro-signs and
>punctuation limited to the character set of SuperMorse.

I hope you'll find the program I've attached to the bottom of this
message helpful. It's in ASCII format, can be easily edited with the
DOS EDIT utility (or any other ASCII file editor), just remove the lines
ABOVE the start of the program and then SAVE it under the name
GROUPS.BAS, then run it under QBasic, QuickBASIC, MS_BASIC7, or most
other 'modern' BASIC's.

ST>The fallback is to simply take any text file and make the necessary
>changes. Before I do resort to this, does anyone have what I'm
>looking for?

FWIW - I also have several files of nothing but CALLSIGNS (10,000 to
20,000 calls per file, US and DX). If you want something like this
(GREAT practice working on copying calls and NUMBERS)., send me a 3.5"
disk, a mailer, and some postage (even Canadian will do) and I'll get it
back to you a.s.a.p.

73 - Tom Hammond N0SS

KL7Y can usually be counted on to appear in most 160 meter contests & DX Tests. Propagation from that part of the world on 160 is quite bad. Best time to look here in the midwest (Ohio) seems to be about 0600-0900 GMT. It took me about six years of sitting on 49 to get my 160M WAS. Good luck

Hi, I have the following for sale. I'd like to sell all
of this together, but I'll consider any offers. Basically
this stuff is taking up space, and I could really use the money.
Here's what I have:

Swan Cygnet 270B 10-80 mtr. tranceiver w/hand mic
Heathkit Dual HF Wattmeter HM-2140
10 mtr. dipole antenna w/about 15-20 ft. of coax (less connector)

The Swan is in really good condition. It needs a new
tube or two since the output power has decreased over the
few years I've had it. This rig was primarily used on the 10
mtr. band. $275 + shipping for everything. If you have
any questions about any of the equipment, feel free to
e-mail me. Thanks!

In the 1970s there was much discussion in the amateur radio press
and elsewhere about "LDE's" (Long-Delayed Echoes) -- radio signals
that were heard several seconds after they were transmitted (much
longer than it would have taken them to propagate around the world
a few times or even bounce off the moon). Have these ever been
explained or debunked?

What is better yet is to see that for the first time in many years
the FCC is taking some action and has announced that they will
be holding a public hearing on the renewal application of KV4FZ
to operate as an amateur radio operator and to maintain a station
under that callsign.

I would suspect that if the matter has reached such a point it is a
foregone conclusion that the FCC questions the merits of granting
the renewal.

This may well take at least one of the actors in this comedy off
the air for good.

I would suggest not getting any device that is not truly an efficient
antenna matching device. There is a company and I believe they were
in FL that had a Maxcon matching device which is actually a dummy
load in a very well made box for a very, very, high price. I makes
the swr look great the the transmitter end looking into the cable.
But you loose better than 90% of your power in order to get the
tradeoff.

: Any ideas?
: Paul Newell

use a TCM3105 (the same chip as in the baycom modem). You may want to add a RS232 driver as well. The TCM3105 data sheet should be information enough to construct the modem. The chip can be programmed for all the standard baudrates up to 1200 baud.

As I recall - 3 memories - and power must be maintained to the radio to keep the memories alive. No sub-audible tone. I think that radio came with a touchtone mike. It was built in about 1978-1980 timeframe. One thing it should be good for is modification to 9600 bps packet, if it's internal design resemebles the IC-260 multi-mode sold at the same time, and with the same physical appearance.

Hope that helps. 73, Bob

: In France and in Europe in general, 2 meter band is channelized:
: Start at 145.600 go to 145.775 every 25KHz, -600KHz split.
: Also start at 145.6125 and go to 145.7865, every 25KHz also -600KHz split.

SNIP
Peter, KC1QF/ON9CGV

While Peter correctly sets out the normal West European pattern -
except that UK doesn't use the second 12.5 kHz block - I think
you will find that a number of French repeaters operate on
non-standard channels lower in the band.

I was hoping you'd detail precisely what on-air behaviour to which you're
referring. I think it compares quite well to that of the A-Team mob
during the same period last year.

>How many woodchip workers are there. Have you even bothered to attempt to
>calculate 4000 as a percentage of the whole group?

I don't think the percentage is all that relevant - do you think that ONE
woodchipper would have had the same impact?

>: (Answer: because so many can't be bothered to get up off their backsides
>: and write a letter of protest)
>
>Exactly.

It's a shame that some people dont think it's worth spending a little
time and a few dollar to do a bit of lobbying, to svae us from (or at
least reduce) an unjustified fee hike, the first of many to come, I might
add.

>
>: >If you can't afford that, do it my way, simply refuse to renew your license.
>
>: Yeah, be a pirate - that's very constructive Graham.
>
>Your 'read between the lines message editor' is doing overtime. I in no
>way promulgated pirate operations. Read what I said.

You said you won't renew your licence. You are either going to give up
transmitting on Amateur Radio altogether or operate without a licence as
a pirate. Judging by your later comments, I suspect the latter. You
weren't suggesting that we all give up Amateur Radio, now were you?

>: It's only as good as you make it, you know. Anyway, there's always CB,
>: which is now free of licence fees. Have fun.
>
>No, it's what others make it.

You depend on OTHERS to determine the worth of your hobby? Hmmm.

> Tried listening to 2m recently? Now have a
>listen to the deafening silence on 70cm and 23cm. It's not me killing the
>hobby, it's the apathy of many others.

When I said "apathy", I was referring to people taking enough interest in the hobby to put pressure on the SMA over the fee increase. The silence on the bands is as much a function of the amount of spare time people have at the time you happen to be listening. We can't all spend the entire day on the radio (much as we'd like to :-)

> FYI, I am setting up a 9600 bps
>packet internet gateway on 70 cm, so I'm doing my part.

Will you still be running this when your current licence expires?

>: PS I don't seem to be able to find any Broadbridges in the callbook (last

>call book, and have been in every callboook since I was first licensed in
>1981. This may possibly be the last year though, if the new fees go
>through.

I stand corrected - you're not on last February's callbook-on-disk.
Still, I hope you'll spend some of the money you might otherwise size by not paying your next licence fee, to write the SMA and pollies.

What have you got to lose?

A couple of guesses from a non-ham:

1) If the signal is coming from a tape being broadcast, print-through.
When tape is wound onto a spool, the magnetism of one layer can
influence the magnetism of the next. Cassette tapes travel at 1.75
inch/sec, as I recall, so at the very start of a tape, adjacent layers
will be 2-3 seconds apart.

2) Pranksters.

IA>ad283@rgfn.epcc.edu

You do not make any modes to the Realistic Handhelds the 202 and the 404. The are controlled by a chip and you would have to remove the chip dump the info unencrpt the encrepted code and then rewrite encrypt and reburn and it may work but not likely. If you find this tough to believe call tech services in Fort worth of Maxxon in Korea where they are built. Just remember this is one of the most propritory companys in exsitence with the exception of Packard Bell computers.

>Enjoy.
>Jim Swenson, K7EZW, Portland.

"Open" isn't the word for it. Blessed relief, maybe. :-)

I actually heard Hawaii on 10M (back here in Indiana) for the first
time in ......oh, I'd bet nearly two years. Twas WH6DY or DZ...can't recall.
I heard several other hams comment that they had worked into New Zealand,
which I didn't hear but again, it's been a while.

The closure of that opening was wierd, too. From my QTH it went
from dynamite to ZERO in less than 5 minutes. Probably closer to about
2 minutes. Everything from 28.3 to 28.5 was dead, just that fast.

Couple more openings like that and I might make my 10-10 VP
before the next cycle starts..... :-)

JDA> Really? Cite the exact law that I broke.

Too lazy to look it up yourself? Call the FCC at their new (800)
number. Tell them that you are a bum who likes to spout filth over the
airwaves, and that you regularly use the 7 forbidden words over the
airwaves and on the Internet, to deliberately show off and try to prove
how manly you are, and that you are incapable of this antisocial
behavior. Then ask them the exact law that you are breaking. They will
gladly tell you.

JDA> I'm glad you found my message offensive. I find your messages equally
JDA> offensive.

I am sorry you are getting such a thrill out of deliberately offending
others. It must really be great to be such a macho cool guy who can get
so much attention by cussing and arguing! Get a life!

JDA> My phone number is below along with my mailing address. (As they are in
JDA> all of my posts.)

I have no desire to talk on the phone with you. Obviously another
attempt to get attention. I don't need you to give me your address
I can get it any time, but I don't want it thanks!

JDA>Put up, or shut up.

Ooooh! I'm SOOOOO scared! Gee, I better get OFF of here and shut up real
fast!! I can see Internetters scattering off of the Newsgroup in all
directions as "Jeffrey" durn well tells them where to go!

JDA> Apparently no one has a problem with this except for you Brian. (Except
JDA> for a few other clueless oafs that seem to think that they are net.cops
JDA> by profession.)

I will not lower myself to your petty juvenile name-calling Jeff.
This is the last message you will get from me about this. And I will no
longer read your pathetic posts. You are SOOOO dense if you don't
realize that you are offending many others who no longer bother to read
your excrement! Why did you bother to become a radio amateur if your
main purpose is to annoy and offend others. Seems really silly.

The founding fathers never had your kind of talk in mind when they
wrote the First Amendment. Your abusive behavior threatens freedom
more than it promotes it. Free speech doesn't mean that you yell
"FIRE!" in a crowded theater Jeffrey!

2046. Help for blind friend

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-13 23:51:00 UTC
From: c_prewitt@emulex.COM
Message-ID: <2F3FF069@msgate.emulex.com>
Source record: 252045

I have a blind friend who would like to get back on packet. In the past he would run all of his ASCII data through a Street Electronics Corporation "ECHO" to a commodore 64. This device would attempt to speak each letter or try to say the word that was displayed on the screen. The ECHO has since died and thus leaving him off of the air.
My questions, Does anyone know if any of the sound cards do or have software to "brute force" each letter/word coming from the serial port? Is there any product that I might be able to use to replace the ECHO?
I have come up with an AT, keyboard and monitor etc. if an IBM type system is required.

Thanks, Chris WA6OQC

2049. Wisconsin QSO Party Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-14 03:33:16 UTC
From: wa9pov@earth.execpc.com
Message-ID: <3hp89s$ckm@earth.alpha.net>
Source record: 252048

DATE/TIME: 1800Z MARCH 12 - 0100Z MARCH 13, 1995

MODES: CW and Phone. All stations may be worked once per mode on
each band. In addition, mobiles may be worked once per mode
per Wisconsin county that they operate from. No Repeater QSOs.

ENTRY CLASSES

Single Operator Fixed Multi Operator Fixed Multi Xmtr/Multi Op Fixed
Single Operator Mobile Multi Operator Mobile Multi Xmtr/Multi Op Mobile
Single Operator Novice Multi Operator Novice Multi Xmtr/Multi Op Novice
Single Operator Tech Multi Operator Tech Multi Xmtr/Multi Op Tech

EXCHANGE: Wisconsin stations send county.
Non-Wisconsin stations send state or province or country.

SUGGESTED FREQUENCIES

CW: 3550, 3705, 7050, 7125, 14050, 15M CW, 10M CW, 6M CW, 2M CW
Phone: 3890, 7230, 14290, 21350, 28400, 6M SSB & FM, 2M SSB & FM
* * * * * * * * * * * * * Other frequencies may be used * * * * * * * * * * *

SCORING

Phone contacts count 1 QSO Point; CW contacts count 2 QSO Points.
WISCONSIN STATIONS: Multiply the sum of QSO points by the sum of Wisconsin
counties (max. 72), plus states (max. 50) plus Canadian provinces (max. 13)
worked. Note: DX countries worked count for QSO points but not as multipliers.
NON-WISCONSIN STATIONS: Multiply the sum of QSO points by the number of
Wisconsin counties worked (max.72).

BONUS: WISCONSIN MOBILES/PORTABLES: Add 500 bonus points for each county
that you operate from, outside your home county, with a minimum of 15
QSOs per county to qualify.

LOGS: Entries must contain a log consisting of: Time (GMT), call, band,
state/province, Wisconsin county, mode and a complete Score Summary
including YOUR name, address and call. Circle new multipliers as
worked. Logs containing more than 200 QSOs must be accompanied by a
dupe sheet (separate dupe sheet for each mode). Mobile entries must
indicate county changes in log. Postmark by March 31, 1995.

Send to: WISCONSIN QSO PARTY; WEST ALLIS RADIO AMATEUR CLUB;
P. O. BOX 1072; MILWAUKEE, WI 53201.

AWARDS

NON-WISCONSIN: Awards will be presented to the following:
a. Highest single operator score in the QSO Party.
b. Highest single operator score in each single operator category in each state/province.
WISCONSIN: Awards will be presented to the following
a. Highest single operator score in the QSO Party.
b. 10 highest single operator scores in each entry class.
c. Highest multi-operator score in each entry class.
d. Highest aggregate club score (club member stations to be located within 5O miles of the club, except for mobiles).

WORKED ALL WISCONSIN COUNTIES AWARD

In conjunction with the 1995 Wisconsin QSO Party, scheduled to begin at 1800Z March 12, 1995, the West Allis Radio Amateur Club, Inc. wishes to announce the sponsorship of a WORKED ALL WISCONSIN COUNTIES Award. Only QSO's made after 1800Z March 12, 1995, are considered valid for the purposes of this Award. This Award will not end with the conclusion of the 1995 WQP but will be a continuing award.

This Award will be available to any licensed Amateur Radio Operator who submits a WAWC Application Form, listing CONFIRMED two-way QSO's with all of Wisconsin's 72 Counties. The WAWC Application Form must be signed by the applicant and verified by one other licensed Amateur, who is not related to the applicant. The West Allis RAC reserves the right to also request that QSL's be sent in for inspection, if any question is raised regarding confirmed QSO's.

Special endorsements for single band and/or single mode will be available if requested when submitting the WAWC Application Form.

The rules and application form for this award are available from the West Allis Radio Amateur Club, P. O. Box 1072, Milwaukee, WI 53201. The application must show the call, city and county of each station worked, date and time, mode and band, all arranged in alphabetical order by county. The application form, which is set up to provide that, must be used. All correspondence regarding the WAWC Award should be addressed to the Post Office Box.

Information on the Wisconsin QSO Party and the West Allis Radio Amateur Club, Inc. is available from http://www.execpc.com/WARAC.

While the closed repeater theory may hold true for Southern California,
here in Northern California you will find lots of open 440 repeaters. In
fact, in this area, on the local favorite ham/commercial repeater hilltop,
there are more 440 repeaters than there are 2 meter repeaters, and they
are all open machines.

Reed,

audio tapes are a fine idea. I did it myself. As to a source
of tapes I suggest to get some PD morse code soft ware
from any of th e amateur radio FTP sites and tape the audio.

Someone on the net complained about poor audio quality from his
PC speaker, but generally it should be no problem.

Good Luck, Moritz DL5UH

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ----------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (10/94)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Send Questions to the Newsgroups, Not the Editors (9/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)

** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

William Newkirk (wnewkirk@bb.iu.net) wrote:

: obviously someone who's burned out. or expected something else...

Not at all.

I've been a very happy amateur for most of the 14 years since I was first licensed. I guess I'm just sick and tired of silly arguments.

: >Exactly what do you get out of the hobby anymore ? Is it really worth it ?
: >Would you be better off investing in a better computer and surfing the
: >internet ?

: fun, i guess...and a radio is a lot cheaper than a good computer and will
: probably not have to be upgraded or replaced every couple of years unless
: someone comes up with a new modulation scheme to replace SSB...or FM..

Really? The prices of decent AR equipment in Oz really surprised me recently. People who pay $1k for a handheld, and who pay $8k for an HF rig really surprise me :-)

Sure these are extremes, but they illustrate what people are prepared to pay. I recently sold an old (very old) FT-290R multi-mode 2m txcvr (1982 vintage). The asking price for these boxes is still around $500 even though I only paid $395 for mine when it was new. A similar piece of computer gear that I purchased in the same year for $3k is now only worth about $200, if I can find a buyer.

: >Everything once possible over AR has now been replaced by the Internet.

: only if you can afford the network time -- costs money every month
: to have a phone line, account at a service provider and all that.
: get the radio, put up the antenna and the only ongoing expense is power.

This is not able to be generalised. Costs of my UUCP feed are around $60 per year. The costs of my live feed will be around $600 a year (which is less than the annual costs of my publicly accessible bulletin board that I ran from 1981 until 1993).

Silent key

We wish to announce the passing of Brian VK2DHO on 20th January 1995, aged 70 years. Brian, of Glenwarrie Place Parkes, was a member of Parkes and Orange Districts Amateur Radio Club, and was the Treasurer for many years. He was instrumental in the establishment of the Grenfell 2 metre repeater.

Brian was also a keen "home brewer" and was also a TV and radio technician. he is survived by his wife, and son David. He will be missed by many of his friends.

Information from Ian McGovern

VK2 DIV. President's Message

This is Michael Corbin, VK2PFQ.

This week we got one of those letters which demoralises hard workers in any organisation. It was a letter criticising my weekly addresses. The information contained in these addresses is designed to inform. This means by necessity that it might contain information which could be unpleasant or critical of people or organisations..... I can't help that! Would you prefer something filled with platitudinous rubbish or..... do you want the facts. All my information is factual, if anyone believes it isn't, then I invite them to take any action they might consider appropriate. I put a great deal of time into keeping you informed. I believe that my only opposition is by those who follow one of those old "teams" or by those who are ill informed. Under the olde guard EVERYONE was treated as just so many mushrooms. This is not the way I do things. I intend to keep you abreast of all the goings on in our hobby.... Pleasant or Unpleasant. If you don't like what I say, it's like watching T.V. the on/off switch is in YOUR control..... I'll be finished in about five minutes.... Turn back on then!

By now all affiliated clubs have received their latest posting, which included a copy of the submission to the SMA. All members will receive one in the next issue of A.R. To this end, anyone who has time to spare should present themselves at the Parramatta Office tomorrow, Monday at about 10.30a.m. We need about four people to help fold and staple these pamphlets for distribution. If nobody comes, then I guess. I'll do it all myself, with help from CESAR MIRANDA, VK2TCM. CESAR and MAX VK2AFE photocopied 1,500 copies last Friday. All we need now is to staple them together. If you

can come, give me a call. Don't just turn up, we may change the venue. Perhaps we could leave them 'till Thursday and get the Veterans to help us!.....Only kidding Franklin.

Now concerning our electrical work. Tim Mills VK2ZTM did the job for us. I'm sure that will please all the knockers. My answer to them....I'll accept any help from anyone who offers in the true spirit. Speaking of help, the painting people are all asked to present themselves at Parramatta next Saturday morning. We have had some good offers and one in particular from none other than Clive Robertson, that's ROBERTSON -- not Robinson. Clive also expressed his appreciation of the tapes supplied by Tim Mills, and no Mr. Robertson they were not recorded in the bathtub under water on a wire tape recorder.... Although, you're probably not far wrong!! Now regarding your comments on our manner of Station Identification....could you please repeat your instructions, our secretary wiped the first part of your tape message, by mistake of course. Indeed, we would be both delighted and honoured to accept and appropriate replacement message. Robertson, as he prefers to be addressed, can be heard on Sydney Radio 2GB Monday to Friday 5.00 AM 'till 9.00 AM. I do not apologise for the free plug. If you can't make Breakfast with Robertson then attend our "celebrity paint in" next Saturday. However, you'll need a Ticket....Give me a call at home on 626 9288.

Letters of reply are beginning to come in as a result of our writing to all the members of the ALP Communications Committee. I'll give you details of these on a future broadcast.....And I promise to criticise those who deserve criticism!!!

Finally a word to those, who are concerned at our threatened pullout from the Federal W.I.A. For the benefit of those listeners who don't know anything about this, a short History lesson..... At a meeting of the Federal Executive in October, that's the organisation we are prevented from belonging to because Mr. Harrison steadfastly refuses to resign, i.e. we have NO representation, a motion was moved to change the Examination function, presently with the Federal Office, to the VK4 Division. This motion was then sent to the Federal Council to make a final decision. The motion was put with little or no debate. Our representatives, who were in attendance this time, Peter Kloppenburg VK2CPK and Peter Naish VK2BPN, viewed this as a move which could spell the end of Federal. The ultimate fragmentation of the various functions of Federal throughout the States. Accordingly, they voted against the matter....and rightly so! VK6, whose delegate had not had an opportunity to discuss it with his council, declined to vote. There is provision in the Federal M.& As. to cover this very situation, i.e. the motion "lays on the table" until a future meeting.

VK2 decided, at a Council meeting, that this situation warranted stronger action....accordingly we threatened to resign from Federal

....and that's all it was, a threat. Such an action would only ever be as a result of a complete breakdown of relationships with our fellow amateurs throughout Australia. This will never happen whilst I'm the President. Quite apart from that, a notification of Intention to Withdraw MUST BEAR THE SEAL OF THE N.S.W. Division.... and all this cannot happen without an Extraordinary Special Meeting which must decide that this is the way to go. I believe that this Division acted quite properly. All States except VK4 have since written in support of NOT moving the examination function. Quite apart from that any change must be with the approval of the SMA. They do not approve. I hope that puts the matter to bed once and for all. My knockers on packet Radio will, I am sure, take due notice and react accordingly. This means of course a complete retraction... A nice start could be a message from none other than the Minister for Propaganda himself...Affectionately known to some as "THE FOOL ON THE HILL". This message was entitled "CORBIN IN DAMAGE CONTROL" from VK2XBR TO SPLIT @ VKNET MESSAGE NO. 24452..... on VK2XSO BBS Yeah, fat chance CORBIN!!!!

All painters will be contacted during the week and advised of starting times Etc.

I'll see the rest of you.....Next week. Someone tell those Blokes its safe to turn their Wireless back on again....Corbin's Finished for another week.... Hmmmmmmmmm!!!!!!

Radio Veterans' monthly meeting

A reminder thet the next meeting of the Radio Veterans at Amateur Radio House 109 Wigram Street Parramatta will be on Thursday 16th February 1995 at 11.00 am.

All welcome.

WIA (NSW) Division services

The NSW Division of the WIA runs amateur classes and examinations, a free QSL Bureau for members, slow Morse practice on the 80m band, a technical library and bookshop -- and also a Trash and Treasure sale on the last Sunday of every odd-number month.

Please contact the Divisional office for details.

WICEN News

Hunter advise that their first meeting for the year will be on 20th February at the Emergency Operations Centre, on the corner of Elizabeth and Hannell Streets, Carrington, starting at 1900, and thereafter on the third Monday of each month. Do any other regions have regular meetings?

The major event this month is the Central Coast Amateur Radio Club Field Day, at Wyong Racecourse, on Sunday 26th February. As usual there will be a WICEN stall next to the Caravan, and people, in

uniform, are requested to help staff it for an hour or two from 1000 to about 1500; this is an important "PR" exercise, as we sign up many new members at this event. Please contact Alan VK2YYJ if you can help, during tbe day on (02) 839-1388, or via packet radio at VK2CZR; members will recall that Alan has run several such shows, and we hope he will receive all assistance this year.

Events next month include the "RTA Big NSW Bike Ride" from the 4th to the 11th of March for which the current contact is John VK2AMH, and the annual Bungonia Cave Rescue on the weekend of 18th-19th March, and Mark VK2XGK is looking for volunteers who won't necessarily have to go underground; Mark can be contacted at work on (02) 936-8689.

A major event in April is the Oberon Car Rally on 29th April, and about 20 people are required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural Report

Here agin is another report on activities at the Dural broadcast station.

A tower-climbing-bee has been organised for Sunday afternoon, so that some of the antennae can be inspected and where necessary straightened; naturally it will be necessary to switch off the Dural beacons and repeaters at that time, so users of these services are hereby warned. Also on the agenda is some work to help make the station power-failure-proof.

One member of the Dural team took a trip down South lately, and found all sorts of hitherto-unknown Broadcast outlets. Since very few records, if any, can be found about these relays, it would be appreciated if ALL relay stations contact the Office, with details of their relay frequency (input and output), period (morning, evening, both, or occasional etc), and technique (sub-audible tone, time-switch, manually, atc), plus anything else you believe may be relevant, such as average number of callbacks etc, so that we can get a better idea of our coverage, and whether any backup channels are necessary. Listeners may recall that following the vandalisation of Dural last year the Broadcast originated from Parramatta for some

time, and many relay stations just disappeared. Please help us make the VK2 Broadcast to be once again the best Broadcast in the country.

--Dave VK2KFU, Dural Engineer

News Briefs

MEDICAL DX?

For the first time in Australia, Telecom's Integrated Services Digital Network (ISDN) has been used to transmit high-definition ultrasound images from Melbourne to medical specialists attending a conference in Sydney.

Such uses of ISDN can be used in the future to pioneer the new field of "telemedicine", which allow specialist medical treatment to be given to patients at rural hospitals that are unable to afford their own specialists.

As Robin VK2VN reported on last Sunday's broadcast, the Space Shuttle Discovery and the Russian space station Mir were flying in close formation, practising for a docking operation that will take place in June.

Orbiting at a speed of 28,000 km/hour, Discovery closed to within 13 metres of Mir. The operation was made extra difficult by a fuel leak on the Shuttle: officials at the Russian Sace Agency were concerned that lumps of frozen fuel could damage Mir's optical sensors and solar panels.

In June, the Space Shuttle Atlantis will perform a complete docking manoeuvre with Mir, the first of seven such manoeuvres to take place over the next two years.

Australia is to have its own annual solar car race, from next January. Organised by Sustainable Energy Enterprise Developments, the "Great Southern International Sunrace will take place over three days. The first leg will be from Adelaide to Broken Hill, then on to Mildura, then back to Adelaide.

The event's organiser, Mr. John Hoerner was involved in the 1993 World Solar Challenge, in which the Australian entry, Aurora, came fifth. Aurora also recently broke the solar car record for crossing Australia from Perth to Sydney.

"News Briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an

item of interest to Radio Amateurs, please send a clipping to the Divisional office.

--Richard Murnane VK2SKY

Central Coast Field Day

Now's the time to put aside Sunday 26th February - that's just two weeks away - for a trip to the Central Coast to visit the Annual Central Coast Field Day. The Field Day has something for everyone. There are traders galore, selling new and second-hand equipment, interesting technical lectures and workshops, special interest groups and displays, fox hunts for those with a competitive spirit, bus trips for the family, and a chance to meet people who you may not have seen for years or have only ever worked on the radio.

More than 2,000 people come from far and wide and this year as in past years there will be many international visitors.

The Central Coast Field day is held at Wyong Racecourse, just five minutes from Wyong Railway Station. The Racecourse provides an excellent venue with under cover display area, Bistro and food facilities and ample car parking within the grounds.

Two entry gates will be in operation this year to avoid the traffic congestion that has occurred in the past. Gates will not open until 8:30 a.m., and this includes entry for Flea Market traders.

An information service will be provided on the Central Coast 2 Metre Repeater 146.725 MHz using the call sign VK2AFY on Saturday 25th and the morning of Sunday 26th February.

Admission is $8.00 for adults, $5.00 for pensioners and Seniors Card holders and children under 12 are admitted free.

Further information can be obtained by writing to the Field Day Committee, Box 252, Gosford, NSW, 2250, or via Packet to VK2AFY @ VK2EHQ. Telephone enquiries can be made by phoning (043) 40 2500.

See you at the Central Coast Field Day on 26th February.

Bob Fitzgerald, VK2XRF
CCARC Publicity Officer

CASTLE HILL MILITARY RADIOS

Castle Hill Military Radio Collection will once again be mounting a display at the Wyong Field Day this year.

Items on display will include:
a BC611 U.S. Infantry walkie-talkie
the U.S. Navy TCS small ships transmitter
a Bendix RA-1B Catalina aircraft receiver
an Australian Wireless Set no 62, with no 10 Calibrator
a late model No 19 Mark 3 tank transceiver

and an Eddystone 730 receiver in military guise
There will also be an associated display of the English Larkspur equipment.

If you need any information on service type radio equipment, please contact me and I will endeavour to bring it to the Field Day.

Donations of equipment, spares or manuals to the collection are always greatly appreciated. As usual, I will have an empty trailer with me.

Please contact me on (02) 680 2112.

Ian O'Toole, VK2ZIO, Curator, Castle Hill Military Radio Collection.

CLUB NEWS: A.A.T.C

Australian Amateur Television Club Inc.

The next meeting of the A.A.T.C. Inc. will be on February 12th 1995 to be held Radio House - Wigram St Parramatta - 1.00 pm. Today!!!

The meeting will outline the objectives for the Wyong Field Day and input from members is expected regarding the display.

A technical overview will be given about the new CPU controlled repeater about to come on line plus other technical directions. Some new project conclusions will also be shown.

Anyone interested in ATV is welcome to attend for general information about ATV and the needed requirements.

For more information about ATV - contact the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Fridays.

Remember the Wyong Field Day is only 2 weeks away - see us there !!

AATC Inc. Publicity Officer Bob Barnes VJ2R

CLUB NEWS: SUMMERLAND

Summerland Amateur Radio Club

The 36th Annhual General Meeting of our Radio Club will be held in the Clubrooms 412 Richmond Hill Road, Goonellabah, on Sunday 5th

March 1995, commencing at 2 pm.

Business to include - Presentation of reports - Confirmation of amendments to Club by-laws - Introduction of the new fees structures, plus Election of Office-bearers and Committee.

Also up for discussion are proposed changes to our voice repeater and Packet digipeater systems.

All members are specifically requested to come along and voice their opinions on these topics.

Guests and visitors are very welcome.

Remember - you must be a financial member of our club to make your vote count.

Ragchew and refreshments to follow meeting.

Don't forget our Computer EXPO in May.

For more information please contact Steve, VK2JSM, Ric, VK2EJV, or Graeme , VK2GJ on H.F., V.H.F. or Packet via VK2RPL-2 668900'

VK2GJ - Graeme - Publicity Officer

CLUB NEWS: WAVERLEY

Waverley Amateur Radio Society

Tomorrow, Monday the 13th of February, marks 75 completed years since the formation of the Waverley Amateur Radio Society in 1919.

The Society has had a chequered career but the one thing which has remained constant is that it has been continuously licenced since that time except for the years during the Second World War when all amateur licences were suspended.

The Society invites all past and present members to come to the next meeting on Wednesday 15th February at 7:30 p.m. to celebrate the occasion. One amateur, Gordon Thompson, VK2AVT, whose connection with the Society dates right back to the 1920s, will be present, so come along and reminisce and also find out where the Society is going in future. The venue for the meeting is the Society's shack at the Rose Bay Scout Hall in Vickery Ave, Rose Bay, next door to the Rose Bay R.S.L. Club. Doors open at 7:00 p.m.

We are planning some events for later in the year including a dinner and would like to hear from anyone who has been associated with the Society over the years.

Please contact the Publicity Officer, Simon Buxton, VK2EII, if you would be interested in the dinner or any other events o that we can gauge interest and also if you have any tales you may be able to relate from the Society's past.

Simon may be contacted either by phone on 328-7141 at home or 391-9738 at work; or via the post to po Box 131, Watson's Bay, NSW 2030.

Apart from the regular meeting on the 3rd Wednesday, the Society is to start a "project night" on the 1st Friday of every month. This is intended for technical discussion, problem solving and a social get-together, so mark it in your diary and come along.

Having a permanent venue, we are now able to conduct classes for prospective amateurs and those wishing to upgrade their licences. The first Morse class aiming at the 10 wpm test is nearing a close and a new class will follow. In addition a theory class will be run every Tuesday night starting in mid-March. Would anyone interested please contact the Secretary, Grant Hinchcliff, VK2TU, on 957-7100 during working hours or 319-1913 after hours.

Simon Buxton - VK2EII - Publicity Officer

CLUB NEWS: LIVERPOOL

Liverpool and Districts Amateur radio Club

The Liverpool and Districts Amateur Radio Club welcomes members and interested parties to its first meeting for 1995.

We will be displaying the prototype of our new kit for foxhunting. The kit is for a Doppler radio direction finder which will include a vehicle display unit and an antenna switching box.

Paul VK2UPB wiill be giving a talk about the features and construction of the unit. The unit will be more than just a foxhunter with applications suitable for other bands such as 6m, aircraft and marine distress, and even 430 MegaHertz.

Everyone is welcome to come along on Tuesday night for more information. The meeting commences at 8 pm at the Scout Hall Cambridge Avenue Glenfield.

See you there

--Brad VK2QQ Publicity Officer

CLUB NEWS: GREAT LAKES

Great Lakes Radio Club

At its first meeting for 1995 the Great Lakes Radio Club considered a number of proposals concerning the establishment of a second 2-metre repeater linked to VK2RGL and located on a mountain top some 80 kilometres to the north-east.

This repeater is required to cover sections of the Pacific Highway which, because of rugged terrain, do not receive a strong signal from the main repeater. Also to be located at this site will be a UHF CB repeater for use by the local Bushfire Brigades and the highway traffic. This repeater is at present being operated by the

Great Lakes Club at a much lower elevation.

Unitl recently VK2RGL had experienced considerable pager interference, although not co-sited with a pager transmitter. Thanks to outstanding investigative work on the part of the Regional SMA office, the sources of the interference were identified and eliminated by the insertion of isolating filters in the feedlines of multiple transmitters to common aerials.

Stan Ellis VK2DDL

COMING EVENTS

Waverley ARC 75th Anniversary meeting . . . . . Wednesday
Radio Veterans meeting at Parramatta . . . . . Thursday
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 20 February
Central Coast ARC Field Day at Wyong . . . . . 26 February
Proposed new Amateur licence fees come into effect . . . . . 1 March
RTA Big NSW Bike Ride (WICEN) . . . . . 4-11 March
Daylight Saving Time ends . . . . . 5 March (check)
Summerland ARC Annual General Meeting . . . . . 5 March
Signals Reunion at Wagga Wagga . . . . . 11-12 March
Bungonia Cave Rescue exercise (WICEN - Mark VK2XGK) . . . . 18-19 March
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 20 March
Divisional Trash and Treasure Sale . . . . . 26 March
Easter Monday public holiday . . . . . 17 April
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 17 April
International Marconi Day . . . . . 22 April

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066. Items can also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

I went to the local coordinator and got the information directly.
I also made on air observations and had repeater trustees send me
information directly. That appears to be the only way to do it.
A couple of sources for you to try to get at some lists.
Try to FTP from mipgsun.mipg.upenn.edu:/pub/yee
In this directory is a list of repeaters and a readme file.
Also try the online directory available via the Amateur Radio Home
page on the web. Sorry I don't remember the URL at the moment.
Let me know if you can't find it.
Best of luck.

2066. Searching for WB8DQT's software "morse.zip"

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-14 15:21:49 UTC
From: e8626609@stud1.tuwien.ac.at
Message-ID: <e8626609.7.0004E9B2@stud1.tuwien.ac.at>
Source record: 251968

Hello OMs !

My father OE5LCO read in the magazine QST (January '95) the article
"Quick and Easy CW with your PC"(written by WB8DQT).

He would like start this project, but there is also software necessary, which
WB8DQT has written.

The only problem is to get this software.

It seems to be only available at following entries:

- ARRL BBS 203-66-0578

- CompuServe HamNet forum library 7.

and it is called "morse.zip".

This zipfile contains "morse.exe, cw.dat, log.dat, cw.hlp" and
"morse.bas" (a QuickBasic source code).

Neither my father OE5LCO nor I are able to get access to one of those entries.

So it will be very kind , if someone helps us to solve this problem.

Tnx in advance
Hans Czylok

LDEs have been reported since at least the 1920s, so we can safely
rule out tape recording print through.

>2) Pranksters.

This can't be entirely ruled out, but the character of the signals
would indicate that the "pranksters" are *very* sophisticated, IE
the LDEs have a watery almost auroral sound that would be hard to
fake, especially in the 1920s.

The latest thinking I've heard on this topic is that LDEs are the
result of very freakish ducting conditions in the ionosphere that
result in a sort of natural maser which amplifies the signals and
can keep them circulating for a long period. Natural lasers have
been noted in the Martian atmosphere. It's not beyond possibility
that something similar at lower frequencies may occasionally occur
in our atmosphere.

Our understanding of the global circuit is really quite rudimentary.
Recent photographs of charge being borne into the ionosphere by
thunderstorms really shook up some of our atmospheric scientists.
There are still a lot of phenonmena we don't understand happening
right over our heads.

>that know each other tend to hang out on 70cm in smaller groups.

Ah, that's not what I meant. Even in areas where all the pairs are
taken, there are still long periods of silence during the day when
no users are talking. The bands aren't full until every repeater
is key down continously with user signals. That's not even true
during drive time in most areas.

It's certainly nice to have an intercom channel that isn't constantly
busy, so you can monitor just for your friends. That's often still
the case on 70 cm, and even on 2 meters in some areas, but that's a
different thing from the band being "full".

I'm not at all sure that the frequency data in the RS units is
encrypted, but that's irrelevant anyway. The radios are designed
with very sharp ham band only filtering. Even if you could somehow
fool the synthesizer into tuning out of band you wouldn't hear
anything thanks to the dandy filters. Those filters are also the
reason these radios don't squall and howl with pager crud like
most Japanese handheld Gameboy scanners that pretend to be ham
radios.

Actually, he was arrested for making threats. He posted a story to alt.sex.stories about raping and torturing a particular woman. He used the real name of a woman in one of his classes.

The FBI arrested him for making threats over interstate wires. Same as if he had used a telephone to do it.

Might I add something from personal experience...about electrical shorts and car fires. I have worked in an automotive garage for a number of years. Its a family business we've had since 1931. We are one of the _very_ few in town who actually rebuild cars that have had electrical fires. Over the years we have seen alot of burn jobs. Cars are some of the most flamable things around and when they get going- you can be in real trouble. Your only hope, is to remove the battery cable before it's too late...sometimes only on the order of seconds..not minutes if you have a serious short. Cars don't blow up like you see on the movies, but we've occasionally had vehicles in the past that nearly could have- considering how fast things went up. Example: One customer of ours was driving along the interstate when he noticed some smoke coming out from under the dash. He had just enough time to pull over and stop. He immediately got out of the pickup truck. He hardly even had time to grab his coat. The whole vehicle burnt down to the ground. The only thing that didn't have all of the paint burn off was tail gate- no joke. Even the tires were melted away.

It's not cool to fool around with electrical shorts...the fuse and fuse holder or even a fusible link (a fusible peice of wire-which is often a good alternative) are relatively inexpensive fire insurance.

Sound like a Portuguese coastal marine station saying he is monitoring
some frequency (I don't believe you got that 46812 MHZ right) for calls.

I would guess that if you listen longer he will also periodically send
the call signs of vessels he has traffic for.

Sorry about the previous post, me editor doesn't tell me when
things will be hard to read on an 80 collumn display...
let me try this again:

Might I add something from personal experience...about electrical
shorts and car fires.
I have worked in an automotive garage for a number of years.
Its a family business we've had since 1931. We are one of the _very_
few in town who actually rebuild cars that have had electrical fires.
Over the years we have seen alot of burn jobs. Cars are some of the
most flamable things around and when they get going- you can be in
real trouble. Your only hope, is to remove the battery cable before
it's too late...sometimes only on the order of seconds..not minutes if
you have a serious short. Cars don't blow up like you see on the
movies, but we've occasionally had vehicles in the past that nearly
could have- considering how fast things went up. Example: One customer

of ours was driving along the interstate when he noticed some smoke coming out from under the dash. He had just enough time to pull over and stop. He immediately got out of the pickup truck. He hardly even had time to grab his coat. The whole vehicle burnt down to the ground. The only thing that didn't have all of the paint burn off was tail gate- no joke. Even the tires were melted away.

It's not cool to fool around with electrical shorts...the fuse and fuse holder or even a fusible link (a fusible peice of wire-which is often a good alternative) are relatively inexpensive fire insurance.

: what are the times? Is this a very large event? I have just passed the
: TechnICIAN test and now i am looking for a radio.... So I want to go to
: this . Thanks for any helkp. E-mail me or post here.

Vallye of the Moon ARC hamfest at Sonoma Veteran's Memorial Bldg,
Sonoma, CA, on April 29. Contact Darrel Jones WD6BOR (707) 938-8086.

The VOM hamfest is not a big event on the scale of the Foothills flea
markets, but it has a very pleasant home-town atmosphere. They used to
serve a ham 'n eggs breakfast -- probably still do.

The Sonoma County Radio Amateurs club also has a bigger flea market in
September in Sebastopol. If you haven't come to an SCRA meeting, it's
open to the public. First Wednesday of the month (March 1) 7:30 PM
at the Hewlett Packard plant in Santa Rosa. (1400 Fountaingrove Pkwy)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 FEBRUARY AND FORECAST FOR 15 FEBRUARY - 17 FEBRUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 13 Feb
Daily Proton Fluence >1 MeV: 3.5E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.9E+08 (moderate)
X-ray background: A6.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Feb 16 Feb 17 Feb
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Feb: 83/24

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled with active levels from
00-03UT and minor storm levels from 12-15UT.

Estimated Indices : A K Observed A Index 13 Feb
Learmonth 20 4333 5333
Fredericksburg 25 25
Planetary 25 29

Observed Kp for 13 Feb: 4355 5533
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Feb 12 Quiet to unsettled however there is the possibility
of an isolated active period occurring.
16 Feb 8 Quiet to unsettled.
17 Feb 8 Quiet to unsettled.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Feb normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Feb normal normal fair-normal
16 Feb normal normal fair-normal
17 Feb normal normal fair-normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
14 Feb 8 Near predicted monthly values with spread F and
sporadic E observed 11-13UT and 18-20UT.

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
15 Feb 15 Near predicted monthly values. Spread f and sporadic
E may affect circuits at times.
16 Feb 20 Near predicted monthly values.
17 Feb 20 Near predicted monthly values.
COMMENT: MUFs at Townsville were near predicted monthly values with
30-50% enhancements from 00-06UT. Sporadic E observed 09-11UT. Hobart
MUFs were 15-20% depressed from 00-10UT, then near predicted monthly
values. Spread F was observed at Hobart 13-14UT.

That depends on what modification you want to do to it. Replacing the flimsy metal belt clip with a real Motorola clip is definitely worth it. I don't know of any other worthwhile modifications. I assume you have already junked the rubber dummy load and put a good antenna on it.

: would be 4 to 8 weeks. Good luck!

Nope, it's taking about a week to get on the air. At least that is the latest experience around here. Call the FCC 800 number about a week after the test to see the the FCC has assigned a call yet. It probably takes 4 weeks or more to receive the piece of paper, but the FCC now says you can begin operating once you're in their computer and you have your call.

Robin Atkinson (robin@mcs.com) wrote:

: I had the same problem with my Ford truck. Ford will install an RFI filter
: inside your gas tank at no charge, if your vehicle is still under the
: bumper -to-bumper warranty. Your Dealer might try to give you a hard time
: about it.

: I can fax you Ford's service bulletin thats describes the problem, how to
: fix it, and what models/years are covered. My dealer would not co-operate
: until I produced it!

: Robin, N9VAF

The reports I have received about this filter are mixed. Some hams report that it fixed their problem nicely; others report that it only helped a little bit, or not at all.

One ham tried to get a refund for the out-of-warranty installation of the filter. The Ford customer-service people told him that their Service Bulletins were advisory, were not guaranteed to work and they would not issue a refund.

I can only speculate that there could be some subtle variance in the installation between the successes and failures. Nonetheless, with the apparent Ford policy about the usefulness of their Service Bulletins, Caveat Emptor! Refer to the September, 1994 and March 1995 QST articles for additional information.

2101. Re: The Legacy of the No-Code Tech License

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-15 16:00:40 UTC
From: billsohl@earth.planet.net
Message-ID: <3ht8f8$o9c@jupiter.planet.net>
Source record: 252000

jeffrey@math.hawaii.edu wrote:

: Hi Carl and Cassandra,
: I don't see where Mike said anything about a particular class of
: license. Why are you concluding that `lowering standards' equals
: the Tech no-code license? Might you be feeling a bit insecure?

: My interpretation of `lowering standards' is:
: * Doing away with 1 out of 5 minutes perfect code copy (no corrections
: allowed) in favor of questions regarding what was sent

True, that dies lower the requirement/standard, BUT it presumes
that MORSE CODE proficciency is an important element in the
contemporary world of radio communications. (Fire up the
code/no code debate again on that one).

: * Doing away with the trip to the FCC office in favor of non-professional
: volunteers as examiners

Now this is really off the wall. Of what importance is requiring
anyone to make such a trip versus being able to avail themselves
of the many local test opportunities?

: * Publishing the test questions and answers

The test questions and answers have always been published. I still have
a copy of an old AMECO test study guide (circa 1958 or so) that
contained the questions. The only difference now is that the question
pool is perhaps more static, but please don't claim that study guide
and questions weren't being published until recently...that just
isn't the case.

: * Much easier questions than I recall being given back in '76

I don't know, when I look over the older novice exam questions I don't
see much difference and the same is true for the general.
I will admit that there isn't any memorization required of circuit
diagrams anymore (I had to memorize 14 different diagrams as
part of the general exam question "pool" I was studying and the
test had 4 or 5 questions where I had to actually draw a reqested
diagram). Obviously the technician license is now a separate element
than when I passed it in 1958 at which time the tech theory test was
identical to the general.

Frankly, I think if more people tried to "elmer" new amateurs rather
than just bitch about lower standrads, etc. we'd have a much better
amateur service.

Would that eliminate some "jerks" from joining the amateur ranks?
Certainly not, as I've met my share of idiots at all levels of
educational and technical background. Anyway, that's my .02.

I assume that you are speaking of a 2 meter HT that youwant to modify for
out of band transmission.
If your are not licensed for that band what reason on earth would you
want a transmitter that will transmit on it? To commit a crime? Put
your hard earned Ham ticket in jepordy?

If you want to transmit on other than ham bands Join MARS or CAP of
course you'll have to work to earn the right to use those freqs.

You're almost right Mike. Here's the sequence I experienced:

(1) Passed exams for a new ticket on 1/28/95 (Sat). VE's mailed electronic
forms to the ARRL on 1/30/95 (following Mon.).
(2) ARRL recorded the information after receipt and forwarded the
application(s) to the FCC.
(3) I called the FCC's 800 number on 2/3/95 (following Fri.). My new call had
just been issued and recorded. I began operation the same day.
(4) Received my ticket in the mail on 2/11/95.

Looks like the FCC is realizing the benefits of their new computerized
system.

Your mileage may vary.

**********************************************************************
* University and School Amateur Radio Club List Version .06 *
**********************************************************************

February 14, 1995

Welcome to the University and School Amateur Radio Club list. The
purpose of this list is to provide information about amateur radio
clubs at schools and universities. The current editor of this list
is...
Jeffrey Luszcz N2TIQ
jeff@gauss.arc.nasa.gov

This list will be availible for ftp from the following servers:

oak.oakland.edu

Also I will be posting this list once every month onto the
following newsgroups:

rec.radio.amateur.misc
rec.radio.info

!!!IMPORTANT!!!
If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....
--------
SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY
---------
If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
```

and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a database which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

The FAQ is now in alphabetical order, great day indeed.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

****

YEAR STARTED:
station licensed '20, club traced to '49
NUMBER OF MEMBERS:
20-30
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY

Oldest license found - 5YM - dated 6/4/20, but there is anecdotal evidence that we may have been licensed in 1914. The station was active in the early '20s prior to the opening of KFMQ, the U of A's first broadcast station. Logs have been found for the '32-'34 period when the station (*W*5YM) was active on 'phone using a Class B modulation amplifier built as a class project. Loy Barton, inventor of Class B, was a graduate and faculty member of the U of A. Haven't found any relics from '34 - '49. 1949 we were granted W5JNI and our station was in the then-Business Admin building. We suspect the trustee knew nothing of the previous station as he was not in engineering. We returned to W5YM in 1952 and the club has been going strong pretty much ever since.

goes back to 1921, but ARRL has no record of this)
YEAR STARTED:
1914
NUMBER OF MEMBERS:
22 voting members, roster of around 75
BANDS ACTIVE:
HF bands, 2 meter and 440 (some sat work)
E-MAIL ADDRESSES:
general membership: W6BB@violet.berkeley.edu
officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

World Wide Web URL: http://www.calpoly.edu/~dmalone/w6bhz/
HISTORY
We're still looking for our roots, but have narrowed it down to 1947. That's about as good as it gets for now, but we're looking for more history on our club.

Our club is an Engineering Department affiliated club, but recently we're attracting members from other walks of life, adding to our diversity. We're involved in ARES/RACES, with our station being capable of running on our own emergency generator at a moment's notice.

We've recently obtained a high-level mountaintop site, and are working on the basics there (ie: electricity, antenna masts, etc) and look forward to expanding our local coverage. Current plans for the mountaintop include:
440 repeater linked to our 146.760 repeater on campus (w/autopatch)
2m crossband repeater (linked to 440 repeater) with two-tone paging capabilities for ARES/RACES callouts
2m repeater on the WALA (Western Amateur Linking Association) system
2m digipeater on the Packet DX-Cluster
440 digipeater for high-speed digital (56kb?) for real-time Internet

Interests of individual club members includes DXing, ARES/RACES, FM voice, packet, ATV, and 10GHz digital.

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.
Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up
an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide
communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

HISTORY
The MTSU club has been around since at least the 1960s, first as a trusteeship of the Dept. of Industrial Studies, and now under the Dept. of Computer Science. Membership has been small because the historic mission of the University was that of a teacher's college (thankfully that's changing). The Raider Amateur Radio Club is a key player in the packet radio field, and its members provide part of the core support in a project to bring high-speed (56k bps and up) packet connectivity to the entire state of Tennessee, from Mountain City to Memphis.

HISTORY
The Northwestern Amateur Radio Society dates back until late 40s or early 50s. It has been affiliated with the McCormick school of Technology and the department of Electrical Engineering since its inception. The club has achieved many awards over the years, including one of the very early 5-band DXCC's.

In 1991 a storm took down our main tower and antenna, and the shack had fallen into disrepair. However, in 1992 Drs. Allen Taflove and Alan Sahakian took over the faculty advisor position, and launched an effort to bring the station back on the air. In the summer of 1992 a new tower was erected at a better rooftop spot than before at a cost of over $10,000, and faculty and student members together cleaned and renovated the shack, and the old transceiver equipment was replaced. We also pulled in Ethernet cabling for Internet, and got a computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the Department of Electrical Engineering which will use the resources of the Amateur Radio club, and hope it will increase student participation.

HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It
was turned over to Rensselaer Polytechnic Institute in 1917 where

it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

Packet W1KMV @ KA1AZ.#SORI.RI.USA.NOAM
HISTORY:

Formed at some time around 1930, but known to be in operation by 1936 as the "Radio Club," encompassing both amateur and broadcast interests. (The University of Rhode Island was previously known as the Rhode Island State College until the 1950s.) Members played an active role in the founding of one of the original eleven college broadcast radio stations, now WRIU-FM.

Civil defense commitments have included operations during the Great Hurricane of 1938 and Hurricane Carol of 1954, in addition to numerous other situations. At various times, the club has done work in earth-moon-earth, satellite, microwave, and similarly exotic modes. URI ARC was among the first stations in New England to use packet radio.

Located for many years in Lippitt Hall, the club station was relocated to the top floor of the Taft Experimental Laboratory in 1986. Taft antedates the university itself by several years, having been built in 1889 to house the old agricultural experiment station which previously occupied the site of the Kingston Campus.

The W1KMV club station license was allowed to lapse, but was renewed by special FCC permission in 1982. Trustees for W1KMV since the renewal have included Wilson Lamb, K4OGP (now N5LFB?), and Prof. Ralph England, WA1YDR.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of the zero district as opposed to the old nine district. We have reason to believe that the club was around even before the war, but don't know under which call or how we can research this. The ARRL doesn't know and the fcc doesn't even bother with this type of stuff.

From: phb@syseng1.melpar.esys.com
Message-ID: <phb.792879110@melpar>
Source record: 252005

drumhell@claudette.nrl.navy.mil (David Drumheller) writes:

> Agreed. Actually, prior to being `absorbed' into the VE system, I
>believe the Novice test was always administered by a General Class
>license, or higher. So the concept of a VE existed even when the tests
>for the higher class licenses were being administered by the FCC.

In the 1950s, only the General Class and Extra Class exams were
given at the FCC Field Offices. The Novice, Technician, and Conditional
classes (the latter being the General Class exam for those who lived
more that some airline distance from an FCC examining point; 75 miles
rings a bell) were all given by mail.

The code test was administered by a General Class or higher, meaning
Advanced (there were still a lot of them around, even though the exam
wasn't being given anymore) or Extra. The written exam had to be proctored
by an adult over the age of 21. (but not necessarily a ham!)

My Novice code test was administered in 1956 by W4BXI, but since
he ws only 17 he couldn't proctor my written so I had my high school
principal do that. My Conditional code and written was administered
in 1957 by W4FJ, who held an Advanced license and was *way* over 21!

Incidentally, in the late '50s the General, Conditional, and Technician
exams written exams were identical; only the code test was different
(5 wpm for the Tech, 13 for the other two) - and the priveleges, of course!
Conditional licensees were also prohibited from administering code
tests or exams; only General, Advanced and Extra could do that, as noted
above.

Bravo, Gary. I couldn't have said it better myself.
Maybe someday we can lay to rest all the urban legends about NiCads.
Until then we must keep on quietly speaking the plain truth:
How to avoid "memory?" Get a smart charger.
How to fix a cell or pack that has "memory?" Replace it.
(In the UK: renew it.)
However you say "take it out, throw it away, and put in a new one." "
(Where "memory" is used incorrectly, as usual, to mean a dried-out cell.)

2108. info please USA/NORWAY 50MHZ repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-15 22:58:33 UTC
From: mjeffs@vision.zynet.co.uk
Message-ID: <mjeffs.22.0011FA5A@vision.zynet.co.uk>
Source record: 252007

Hi folks,

You are probably aware of the current UK debate about putting repeaters on 50MHZ.

I am trying to get REAL information from existing users/keepers in the USA and NORWAY.

If you have any useful FIRST HAND info regarding propogation, mobile use, user feedback , problems etc, please post here or replies to my e-mail address.

I will produce a brief report to put onto the UK packet network, so there can be some real facts to inform the debate!

Thanks in advance.

2109. Kenwood 830 question

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-15 23:02:38 UTC
From: gdm@fermi.ualr.edu
Message-ID: <3hu16e$9up@news.ualr.edu>
Source record: 252008

Our ham club at school was given a Kenwood TS-830S transceiver.
I haven't seen it, but apparently the tubes had been pulled and there
is no documentation. As the resident old-timer, I was asked what
kind of tubes they would have been, but I haven't the foggiest, having never
seen inside one of these rigs (I was always a Drake man.)
With the old Drake tube rigs, the brand of tube in the final stage
was significant due to variation in interelectrode capacitance
in 6JB6 sweep tubes among different manufacturers. Changing
to a different brand required re-neutralizing the final.
Is this a factor in 830s? About tube type numbers: I think
they said the finals were 6146B's, but the driver type was unknown.
Any help?

73,
Doug K5DH

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z FEBRUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 FEBRUARY AND FORECAST FOR 16 FEBRUARY - 18 FEBRUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 85/27

GOES satellite data for 14 Feb
Daily Proton Fluence >1 MeV: 3.6E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 5.1E+08 (high)
X-ray background: A6.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Feb 17 Feb 18 Feb
Activity Very low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Feb: 87/30

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mostly unsettled, with an active
period 15-18UT.

Estimated Indices : A K Observed A Index 14 Feb
Learmonth 14 3333 2432
Fredericksburg 10 20
Planetary 11 24

Observed Kp for 14 Feb: 5434 5332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Feb 10 Quiet to unsettled
17 Feb 15 Quiet to unsettled
18 Feb 15 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
15 Feb normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Feb normal fair-normal fair-normal
17 Feb normal normal normal
18 Feb normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
15 Feb -18 were 15-20% below predicted monthly values in the
first half UT day and near normal otherwise.
Blanketing sporadic E was observed 12-13UT.

Predicted Monthly T-index for February: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
16 Feb 5 Near predicted monthly values
17 Feb 15 Near predicted monthly values
18 Feb 15 Near predicted monthly values
COMMENT: MUFs at Townsville were 15-30% and at Hobart were 15-20%
depressed in the first half UT day and near normal otherwise.

It's the *B*ayonet version of the *N*eill-*C*oncelman connector,
as opposed to the *T*hreaded version (TNC). At least I think that's
right.

2113. How to open up wideband receive on FT-530?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-16 05:33:36 UTC
From: rodell@netcom.com
Message-ID: <rodellD42vG1.I0q@netcom.com>
Source record: 252012

I just received my second FT-530, and I can't remember how I programmed
the first one for wideband receive with direct entry.

Could someone please enlighten me (and I'll write it down this time)?

Thanks in advance!

rob

> your current call and your check would be refunded.

I was thinking of applying in Gate 2. Any chance that I will be able to
find out what calls became unavailable as a result of Gate 1 before the
Gate 2 deadline?

2115. Opinions about FT-ONE

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-16 09:19:42 UTC
From: uiahmed@uxa.ecn.bgu.edu
Message-ID: <3hv5be$hd8@news.ecn.bgu.edu>
Source record: 252014

I have recently bought a FT-ONE with all accessories and filters
installed. I will be mainly using it for DXing. I have never seen any
mods or discussion about this rig on this group. Need to know more about
this rig. Will be using it in my shack in AP-land. Appreicate any comments.

Channels:

Input	Output
R0	145.000	145.600
R1	145.025	145.625
R2	145.050	145.650
R3	145.075	145.675
R3x	145.0875	145.6875
R4	145.100	145.700
R5	145.125	145.725
R6	145.150	145.750
R7	145.175	145.775
R8b	144.725	145.325
R9b	144.750	145.350
R10	144.775	145.375
R11	144.800	145.400
R12	144.825	145.425

R0 to R7 are in use throughout Europe. R3x and R8b to R12 are unique
to France.

All repeaters in France are accessed with a short 1750Hz toneburst.
With a bit of practice a short whistle will work as well (try doing
that with CTCSS repeaters!) See '1750Hz Hospitality' PP105 QST Jan 95.

From personal experience, unless you speak French, don't bother taking
a rig with you - it'll be deadweight.

Archive-name: qrp-clubs-list
Last-Updated: 1995/02/15

---------- Begin of The QRP Clubs List ----------

==========
THE QRP CLUBS LIST The QRP Clubs List
Version 0.96
February 15, 1995
Compiled by Richard Hieber, DL8MFQ/AA8CP.
Email: <sz0026@daphne.rrze.uni-erlangen.de>
Packet: [dl8mfq@db0sif.deu.eu]

~Subject: The contents:

This file contains information about the following QRP clubs:

o 9A-QRP Club
o Arbeitsgemeinschaft CW / Activity Group Telegraphy (AGCW-DL)
o QRP Club ARI
o QRP Amateur Radio Club International (QRP ARCI)
o Benelux-QRP Club
o Grupo-QRP do Brasil
o QRP Club of British Columbia (BC QRP)
o QRP Society of Central Pennsylvania (QSCP)
o Cleveland QRP Amateur Radio Club
o Colorado QRP Club (CQC)
o CW Operators QRP Club
o EA QRP Club
o EA8 QRP-DX Club
o G-QRP Club (G-QRP-C)
o Italian QRP Club (I QRP)
o JA-QRP Club
o MFJ 90's Radio Club
o Michigan QRP Club (MI QRP, M-QRP)
o The QRP Club of New England (NE QRP)
o The QRP Club of Northern California (NorCal QRP)
o NorthEastern Illinois QRP Society (NEIQS)
o The NorthWest QRP Club (NW QRP)
o NorthTexas QRP Club (NorTex, NQC)
o OK QRP Club (from the Czech Republic)
o Oklahoma QRP Club (OK QRP)
o St. Louis QRP Society (SLQS)

o U-QRP Club
o WI QRP Club
o ZS-Algoa QRP Group

The ordering of this list is somewhat arbitrary though it tries to follow the alphabet :-) No weighing is intended.

Two list entries here are somewhat special:

- The "MFJ 90's Radio Club" is focussed on the MFJ 90xx series of QRP transceivers but not affiliated with the company. Rather than being a club it is more a newsletter and its readership.

- The "AGCW-DL" is not a QRP club but rather a CW club. It is in the list because of its strong QRP activites and because there is no dedicated German QRP club.

In addition to all that you'll also find information about defunct clubs and newsletters, ceased activities, 'unofficial' groups and a small paragraph about the world famous INET QRP Club ;-)

Spelling and punctuation tries to follow European standards.

~Subject: The format:

ABBR: Abbreviation
FULL: Full name
PRES: Club President
ADDR: Contact address for membership and info
SINC: In existance since ...
COST: Membership cost (yearly)
NEWS: Club newsletter, name and frequency
NUMB: Current membership numbers (approximately)
MEET: Regular meeting
QNET: QRP nets, 'on the air' meetings
PROJ: Previous and current projects
TEST: Contests, activity periods
AWRD: Awards
COMM: Comments

The NUMB entry is only meant to give a rough indication about how big the club is. The numbers given are not precise and cannot be. The number of active members is not equal to the last issued membership number - some former members are SK now or have left the club. A good indication of active membership numbers is the number of people that subscribe to the club newsletter.

The PROJ entry isn't meant to be a listing of all the building projects that any club member has ever done. Rather it should list all the projects that were designed by a club member, were realized by several others and are available as a circuit diagram, kit or

whatever. This entry shows you where household names like 'Epiphyte'
or 'Sierra' originated.

Similar story with the TEST entry: It is not a list of activities the
particular club *participates* in, but rather a list of activities
that *originate* within the club. There is no space to give details.
By supplying the name everybody can see that a special activity exists
which will give him the starter to ask for more information.

I would also like to supply information about regular 'on the air'
meetings of the clubs (entry QNET). If you know about such activities,
please notify me; my address is at the end of this file.

In this revision of the QRP Clubs List lots of entries are empty,
because information is missing. I didn't delete them to encourage
feedback so that I can make the list more complete. But I know it
looks stupid - so this will change in future revisions of the list.

Addresses in <brackets> are Internet email addresses; those in
[brackets] are valid in the Amateur Packet Radio network.

~Subject: Defunct clubs and newsletters, ceased activities:
----

o QRP society of the UK (1949-1964?)
o Pacific Amateur Radio Group (?)
o Illinois QRP Society (ILQRPS) (?)
o "K5FO QRP newsletter" (1994)
o "The Milliwatt" (1970-1975)

~Subject: 'Unofficial' groups:

~~~~~~

o The DRAGONSLAYERS QRP Group

This is mainly a Dutch group of amateurs with guest members from two other countries only. Dick Pascoe, G0BPS, is the only British member. Three Germans are also members being a family, husband, wife and son. There are no membership fees, no magazine, no contests etc, just a group of friends. Membership is by invitation only!

o Zuni Looper Mountain Expeditionary Force

This is a local gathering of QRP ARCI members in Southern California, who operate Field Day with QRP; the name refers to the particular part of the State or National Park they always operate from (the Zuni Loop area of the park). They are well known and admired for the *HUGE* wire antennas they erect.

o Maryland Milliwatt Club

The club was founded in 1992 by two members. Membership is by invitation only. Mailing Address: Maryland Milliwatt Club, 3052 Fairland Rd, Silver Spring, MD 20904.

o World QRP Federation (WQF)

The only thing I know is that Gus, G8PG is president. I suppose it's a kind of QRP cover organisation. Can anyone give more info on this?

~Subject: Acknowledgments:

I was using the club list maintained by Bill Kelsey, N8ET, as a basis for this list. Much later when perusing the QRP-L archives I discovered that Chuck Adams, K5FO, had already compiled a list which contained clubs that I didn't know about. Additional information came from other contributions to QRP-L and from assorted printed material, most notably publications of the G-QRP Club. Thanks for very helpful contributions and corrections from (sorted by callsign):

Guenter, DL2LBF, [dl2lbf@db0hro.deu.eu]
Dick Pascoe, G0BPS, <dick@kanga.demon.co.uk>
Walter Palings, ON7PX, <Walter.Palings@belspo.be>

provided that it remains complete and unmodified and reasonable
attempts are made to use the latest version.

The editor makes no guarantee as to the usefulness of the information
provided herein. The editor takes no responsibility for any damages
resulting from the information provided in this list. If you are in
doubt, please post a question to the QRP-L mailing list or ask your
local elmer :-)

~Subject: Update information:

This is what I call a beta version of the QRP Clubs List. I intend to
to make this list up to date and as complete as possible. Therefore I
need your help.

If you find outdated information or errors in this list, please let me
know. If you know of any QRP club that you feel should be in this
list, then let me know, too. The same applies if you have ideas on how
to improve this list. Since English is a second language to me, I'd
also be grateful for hints on mistakes with grammar or vocabulary.
Please note that I try to stick to European conventions in spelling
and punctuation 'cause this is what I learned in school.

For the most up-to-date copy of this list, send email to
<sz0026@daphne.rrze.uni-erlangen.de> or a packet radio message to
[dl8mfq@db0sif.deu.eu]. From version 1.00 onwards this file will be
available via a FTP site also (probably SUNSITE.UNC.EDU).

>but the Yaesu, ICOM, etc. can.
>Any ideas would be appreciated.

None of the current crop of *amateur* radios can be legally modified
to marine because none of them are Type Accepted for marine use.
However, you can get a Type Accepted *marine* radio and have some
of its channels programmed into the 2 meter ham band. That's perfectly
legal and workable. Icom makes a nice marine radio that could be
so programmed.

Good luck on the upgrade.

Sure is great about the number of new hams who are upgrading to general and beyond. I think that the system is finally working.

It's nice to be able to listen on the HF bands and work individuals who haven't been in the hobby longer than I've been alive.

73 for now, and good luck.

I took the General class license back in 1967, and I assure everyone that
no exam given today is easier than that one was. (Had to take it down at
the good old FCC.)

Furthermore, in '67 the advanced was so easy that I, a 13 year old at the
time, passed it without studying more than an hour.

Today's tests to me seem to measure up quite well. I do agree that the
CW is easier, since there is a multiple-guess format.

Today's system works pretty well IMHO.

>even during peak hours. The definition is fine, you just need to
>remember the peak hours thing...

I did read his entire post. I agree that there are repeaters that are essentially unused during peak hours, and can at least grant that his contention that the bands are not full then has some validity. What I was criticizing was his ludicrous assertion that the bands would not be full until every frequency was constantly in use, 24 hours a day. That's not full, that's severely overcrowded.

I remember the peak hours thing just fine - it's the basis of my entire argument. Gary, OTOH...

I recently had the opportunity to administer an extra class
code and written to a HAM of foreign extraction. He is an
accomplished DXer in his homeland and is in MANY stateside
logs. He has been to a few of our VE sessions and takes them
very seriously.

He passed his Code element easily (??!!??) and spent a very long
time on the written. Upon handing it in he told the team how he
was sorry and that he felt that he did not do well. As it ended up he
only missed 5 questions.

Whn he found ot that hepassed he said this:

Now when i see my friends from "the pold country" i can say to them
' i don't know how you got your license, but i know exactly how
i got mine'."

For those of you in the cheap seats..... He worked for it, was tested
on his knowledge, and received operating priveledges as a result.
Before your next posting about how the current licensing system
is too easy, not what it used to be, a "gimme", etc... Keep in mind
that it could be corrupt, closed to may citizens by class, under
military control, ILLEGAL....

No, you do not have to be the next Lee DeForest to get an Extra class
ticket, which is good for most of the amateur community. If you have a better
way to handle it you have to do the work like that done tomake the
changes we see now,. Novice enhancement, No-Code, VE testing, name it
and it was made possible through hard work, not by grousing in a
usenet news group.

I've come to the conclusion that police don't seem to want to pull me over. Experience after experience of being paced (a warning?) when speeding but never one ticket. I'm not crazy, but sometimes, just like almost everyone, I go faster than they think I should.

For example, a Park Service police car paced me going 65 or so on the George Washington Memorial parkway in VA a couple days ago. I believe the limit there is 45 or so. Its a nice safe road, but its a parkway, so the limit is lower. Unfortunately, I didn't notice him (or her) there for quite a while. When I did, I immediately slowed to 50mph. Then the cop passed me at 60-65 on my right and zoomed out of sight.

I've seen times where I've come into radar view, the officer has started the car moving but then stopped as I approached (I slowed as soon as I realized I was about to be nabbed) and continued about his or her business?

Could it be Ham plates or just plain luck?

Maybe I don't speed as much as I'm afraid I do?

I agree with Gary's definition. If there were as many hams as CB'ers they would get close to that level of activity, forcing us to actually USE 440 or even (shudder) 220 or advanced trunking/multiuse techniques that allow for such activity levels.
Out here in the southwest the 2 meter Zia Link has close to saturation during the day and activity all night long. There ARE those who enjoy hamming at 3 AM (police, truck drivers, insomniacs, others who just don't go by "normal" clocks, etc. When, on infrequent occasion, I find myself on the road at a similar unearthly hour I'm happy that systems such as Zia are available. During daytime hours only "lonely mobiles" listen to such systems because they are in almost continuous use.

<snip>
Actually there is a later version than 1.4.... it is 1.5 and even that is
now several years old. 1.5 has a little more online help but on most
PC's I try it on it seems to occasionally lock up the system which NEVER
happens running 1.4. So I still run 1.4 though I have 1.5 too. Tell me
an FTP site you can access and I'll FTP to you whichever one you want.

I certainly HOPE Lee DeForest's tactics are not required for ham or any
other activity.
De Forest may have invented the Audion or triode vacuum tube (i.e.,
modified Edison's discovery of diode action in a vacuum) but he never
figured out how it worked nor what to do with it. When Armstrong
discovered its amplification abilities and how to make it oscillate by
coupling some of its output back to its own input and began the real
modern day radio industry De Forest spent perhaps millions trying to
steal Armstrong's discoveries and patent them for himself. PBS had
a very good movie on this a few years ago, and I subsequently read the
book, but (Blast!) cannot recall the exact title now. Kingdoms of the
Air or something similar.

[Article crossposted from rec.radio.amateur.equipment]
[Author was CJ]
[Posted on Thu, 16 Feb 1995 15:16:56 GMT]

I've recently come across a TH-28A sans manual. I've figured out how to do most of the things I want to do, but I have not yet figured out how to set the transmit shift. I can get it to toggle "off" "+" and "-", and it seems to have the appropriate "standard" shift for the 2m band (0.6MHz), but I'd like to know if I can program a non-standard shift.

So, if anyone knows how (or if) this can be accomplished, please let me know. E-mail to cj@boi.hp.com if fine, or reply to this note...

Thanks in advance...

You have to wonder: This guy was stupid enough to open his mouth about
this somehow being the result of the No-Code license. I have not yet
made the connection, probably never will. I have a no-code license,
therefore, I am dangerous, stupid, and undeserving of my license and
access to the airwaves.

Perhps the guy that wrote this should be the poster child for genetic
engineering. He could be the "your brain on drugs" part. Lowering
standards? Dropping the code requirements wouldnt be lowering the
standards, it would be aligning them with modern practices and
technology.

Source record: 251943

Hello;

The NWS operates continuous broadcast stations on three frequencies at 162.4, 162.55, and 162.475 MHz (I may be slightly off on the freqs). My question is this - one can buy a little receiver for these broadcasts at Radio Shack and elsewhere, and they have some kind of alerting capability. Apparently, the little buggers respond to some kind of a DTSS code or CTCSS subaudible transmitted by the NWS station whenever they issue a weather bulletin. Does anybody know how this alerting operates? I have my 2m receiver set to pick up the local NWS freq, but I would like to know if I can set up the CTCSS or DTSS so that it would break squelch only when the NWS issues a bulletin. Is this possible? Anybody know what the codes/tones are?

Thanks,
Doc Elliott

Pilots started putting radios in their planes before FM was invented, and nobody wanted to make all of the existing radios obsolete so they kept using AM.

Transmitting distances depend more on frequency and power than on mode, at least when comparing AM and FM. (SSB or CW would go farther given the same power on the same frequency.) You are probably thinking of the differences between the AM Broadcast band (550 khz to 1600 khz) vs. the FM Broadcast band (88 Mhz to 108 Mhz). The range differences between these are caused by the different operating frequencies, not by the different modulation modes.

:
: Can anybody here confirm or deny this?
:

One theory has been that AM aircraft radios had been in service
for a while, worldwide, then along came WW2. Viable VHF FM apparently
had become more developed near the end of the war but was too
late for aircraft use. Now, it would be almost impossible to
replace all those VHF AM radios with the FM equivalents. Generally,
pound for pound, an FM signal will travel the same distance as an AM
signal of the same frequency and strength. However, due to the
FM capture effect, it is tougher to hear faded FM stations if
other stronger ones are nearby, compared to AM. Ionosphere may
also affect an FM signal differently than an AM signal, given
the same originating frequency/signal strength/antenna.

"Just tradition" is probably the most accurate description -
if it ain't broke, don't fix it. I guess air AM VHF is more of
an anomaly than anything else, when you consider just about everything
else from 30MHz and up is mostly NFM or WFM, and some CW, or, data.

2149. Your filth

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-16 22:05:15 UTC
From: richwood@commspec.com
Message-ID: <7760-305538802@commspec.com>
Source record: 251947

IB>Your messages are deliberately offensive. The FBI and FCC are interested
IB>in your types of messages. Believe it or not, your 4 letter word
IB>is still a Federal Offense over public common carriers like Internet
IB>and BBSes that any one of any age may call and read.

Brian,
While I admire your attempt to intimidate him I think you destroy
your credibility by even suggesting that the FCC or the FBI will waste a
moment of their time enforcing any ban on 4 letter words used on the
Internet.

Frankly, I'd much rather have them investigating terrorism and
organized crime. Once they've cleaned that stuff up, then they can go
after these word villains who offend you so. The FBI, like most law
enforcement agencies, cares more about donut quality than the purity of
language.

IL>I sligltly disagree with you..CW is a skill, but a personnal one..
IL>If you really want to talk to someone in HONG KONG just call them on the
IL>telephone..No real skill in doing this is it..But to communicate with
IL>someone who speaks a different language (but the same CW language) is a
IL>skill..To copy someone sending CW when its about five other stations on

Lenny,
This is very interesting! How do you send Chinese in CW?

CW is NOT a language. If I send the Morse character "A" the person receiving it will receive an "A." There is no "A" in Chinese, so, unless the person in Hong Kong reads English he won't have the foggiest idea what you're sending.

If I send "voila" to someone who doesn't read French, it means nothing to him. There's a great difference between sending a series of characters and whether or not the receiver understands the resulting words.

CW is a mode of operation. There is no such thing as a "CW language." CW simply communicates Morse characters which must be understood in the language sent.

ARLB017 RFI changes proposed

ZCZC AG83
QST de W1AW
ARRL Bulletin 17 ARLB017
From ARRL Headquarters
Newington CT February 16, 1995
To all radio amateurs

SB QST ARL ARLB017
ARLB017 RFI changes proposed

RFI changes proposed

The FCC has proposed to permit manufacturers and suppliers of computers and computer peripherals to market their equipment without having to apply for equipment certification and await FCC approval, in ET Docket 95-19.

These devices now must be FCC-certified to ensure that they do not cause interference to radio services, including amateur. Certification requires that all measurement data and a detailed description of the product be submitted to the Commission's laboratory for review and approval.

The certification process can take 35 days or more, the FCC said, and eliminating the wait could save the computer industry some 250 million dollars a year, the industry has said. The FCC called the current regulations ''particularly burdensome for small manufacturers'' and said its proposed new authorization procedure would ''align'' FCC requirements for personal computers with those ''used successfully in other parts of the world.''

Under the proposed new procedure, FCC authorization would be replaced by a process based on a manufacturer's or supplier's Declaration of Conformity (DoC). The Commission also has proposed the option of permitting personal computer compliance to be based on tests and DoCs of individual components, without further testing of completed assemblies.

ARLD008 DX news

ZCZC AE83
QST de W1AW
DX Bulletin 8 ARLD008
From ARRL Headquarters
Newington CT February 16, 1995
To all radio amateurs

SB DX ARL ARLD008
ARLD008 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Akio, JA3JM, Alan, NS0B, Tosy, JA6VZB, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

UGANDA. Paul, 5Z4FO, aka W4PFM, OA8V and KP4AWH, will be relocating to Uganda for a one year work assignment starting in July. He will be active signing 5X1MW on all bands. Listen for his CW and SSB. QSL via KB4EKY.

NORTH PACIFIC DX VACATION. JA3JM's schedule has changed from what was publicized in last week's bulletin. Akio, who is presently signing AA5K/AH2 in Guam, will stop in Palau on his way to Saipan. He plans to operate KC6AS from February 17 to 20, and AA5K/AH0 on February 20 and 21, with emphasis on RTTY, 160 meters, mode K on RS 12 and mode B on OSCAR. QSL via JA3JM.

MACAO. Leo, K8PYD, is now on as XX9TYD and was heard on 14033 and 7004 kHz around 1200 and 0030z respectively. QSL via K8PYD.

VANUATU. YJ0AXC has been on either 40 or 80 meters most mornings from 1100 to 1300z.

MICRONESIA AND BELAU. JA2NQG will be signing V63WW from Pohnpei February 17 to 23, including contest operations. From February 24 to March 1 he will sign KC6CW or KC6WW. QSL via JA2NQG.

BELIZE. Alan, NS0B, and John, WC0W, will be in on the contest action as V31TP, unless a special call can be secured. They return home on February 20.

TURKS AND CAICOS ISLANDS. Ken, K0PP, will be active from February 16 to 23, including the ARRL DX Contest. The contest call will be VP5PP. Outside contest hours, listen for VP5/K0PP. QSL via K0PP.

DOMINICA. Lou, WA6SBS, and George, N6ZS, will be in the ARRL CW Contest, possibly using the call J75A. Outside contest hours they will be on all bands with CW, SSB and RTTY. QSL via N6ZS.

ANGUILLA. Dave, WJ2O, plans to be in the ARRL DX CW Contest from the QTH of VP2EHF and VP2EE and sign VP2E/WJ2O. Listen for him on 1818 kHz at 0600z both days of the test.

MONTSERRAT. Art, WA2UJH, received the call sign VP2MDY and will operate through February 26. He plans to operate mostly CW on 40, use 80 and 160 meters including activity on the WARC bands. QSL via NW8F.

GUATEMALA. Scott, KA9FOX, be in the ARRL DX SSB Contest and hopes to operate TG9GI as TG0AA. He will try to be on before and after the contest from the QTH of TG9AJR. QSL via KA9FOX.

BARBADOS. Peter, W0SA, will sign 8P9NX on CW and RTTY from February 19 to March 2 . He will be active on CW and RTTY. QSL via W0SA. Dan, N8DCJ, will be on as 8P9CW February 18 to 25. Dan favors CW and will be on 160 through 10 meters. QSL via WB8LFO.

BAHAMAS. Larry, K3TLX, received the call sign C6AHE for his Bahama operations. He should remain active through February 21. QSL via K3TLX.

SWEDEN. The new prefix SH is being issued to Novices. SH-licensees have HF, as well as VHF/UHF privileges.

THIS WEEKEND ON THE RADIO. The big event for this weekend is the ARRL International DX Contest on CW. See pages 122 and 124 of December QST for full contest rules.

Other operating events include the YL ISSB and Winter QSO Parties. For more info on the former, check page 123 of December QST, and page 128 of January QST for the latter.

Because FM receivers exhibit "capture effect" (the strongest signal will
nearly fully quiet all weaker signals) an emergency/distress call by an
aircraft more distant than another transmitting aircraft would not be
heard, and controllers would not be able to detect doubling (when more
than one station transmits at the same time). It would be pretty
chaotic in a place like the LA basin trying to get through to ARTCC
with FM sigs!!

2167. WTD:Info:Bob Garner W6EAJ (d.1970's)

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-17 06:32:22 UTC
From: mwchang@taco.engr.ucdavis.edu
Message-ID: <3i1ftm$jug@mark.ucdavis.edu>
Source record: 251833

I am trying to contact people who knew, or had a QSO with the late
Robert Garner W6EAJ. Please e-mail if you have any information. I may be
working on his biography.

I recently received a telephone call from an friend whom I met at
a wedding several months ago. She told me she had just moved onto some
land located on a remote peak; among the highest in the Northern Calif.
Redwoods' coast range. She explained to me that some legendary eccentric
by the name of Bob Garner had lived on the property, died about 20 years
ago, and left behind a huge quantity of radio electronics, literature, and
antenna systems and asked me to come out and haul away as much as I could.
Not knowing what to expect I made the trek over there last weekend
and, after fording several streams and roughing some pretty rocky mountain
terrain in my passenger wagon, I was shocked to discover a gold mine in
antique electronics. There were truckloads of early Western Electric and
Cunningham tubes, early transmitting equipment, broadcast microphones,
scanning disc television parts, phonos and early recording equipment and
many other collectables.
But more impressive, and intriguing, were the elaborate
laboratories and installations, which were unfortunately quite badly
damaged by 20 years of weathering and mudslides. I found the remains of a
huge homebrew hydroelectric plant (the turbines were over 8 feet in
diameter) which was probably used to power some very high-power
transmitting equipment, as I also came across a room-sized wooden
transmitter chassis with scores of 1.5-foot long transmitting tubes, mostly
broken, mounted with ceramic socket bases. The hydro-plant harnessed the
energy of a fast-running stream which puzzled me since I was just a stone's
throw from the summit. As I walked upstream I discovered a rare high-output
mountaintop spring geyser! I figured Bob must have done a lot of shopping
before finding _this_ transmitting site!
Looking over some of Bob's personal records and technical notes
revealed even more fascinating information. It turns out that Bob had been
one of the early pioneers of radio, possibly a Marconi engineer, had
conducted early experiments with television, FM and microwaves in the
'20's and '30's, and was a chief military wartime radio engineer. During
the second world war he lost his security clearance and disappeared into
the woods where, judging by his notes and library of texts, he invented
and fabricated clandestine equipment used to spy, jam and otherwise thwart
efforts to implement nuclear weapons via high-power radio transmissions!
Much of the equipment is still intact: early microwave klystrons,
home-blown special-purpose tubes, and a plethora of military experimental
electronic apparatuses.
I learned from my friend, who now lives up there surviving off
the plentiful vegetation and forest resources, that children of other

reclusive forest inhabitants used to sneak up to Bob's window to watch the "magic wizard" at work, sometimes witnessing the eerie high-voltage phenomena and strange noises coming forth from the wireless receivers. I found a supreme court document describing numerous cases Bob brought against the local police. Apparently he never paid the numerous speeding tickets he got while making his parts runs; 2 hours on sketchy dirt roads to the nearest town; time Bob would have rather not wasted. His '57 Chevy Bel-Air '63 Impala wagon sit rusting nearby, filled with old radio parts and covered with bullet holes. Unfortunately many of his notes, wax recordings, wire and tape recordings have been destroyed. If you have any information about Bob I'd really appreciate the sharing.

>When 10M openings become more frequent in the years ahead will 10M
>repeaters be shut down so as to avoid QRM'ing folks thousands of miles
>away? Wouldn't that be the polite thing to do?

Jeff,

This is a subject, which will cause a lot of headaches in the years
to come. There seems an increasing number of repeaters is licensed
here in DL, with the result that many FM frequencies are cluttered
by their carriers when the band is open. (at least the output freq.)
So it remains to work on input frequencies.

The way amateur radio is organized, I am sure the repeaters
will not be shut down, and using the satellite portion, even
when none is in reach is not a particularly good idea also.
(IMO they should be shut down too when the band is open)

73, Moritz DL5UH

R10	144.775	145.375
R11	144.800	145.400
R12	144.825	145.425

R0 to R7 are in use throughout Europe. R3x and R8b to R12 are unique
to France.

All repeaters in France are accessed with a short 1750Hz toneburst.
With a bit of practice a short whistle will work as well (try doing
that with CTCSS repeaters!) See '1750Hz Hospitality' PP105 QST Jan 95.

From personal experience, unless you speak French, don't bother taking
a rig with you - it'll be deadweight.

WRONG! BNC is named for the two engineers who developed it, Neill
and Concilman (sp?); the "B" stands for "bayonet." TNC is also named
for them, except that the "T" stands for "threaded. The Type N stands
for Neill, the Type C for Concilman.

So, the correct names are:

BNC: Bayonet Neill-Concilman connector
TNC: Threaded Neill-Concilman connector
C: Concilman connector
N: Neill connector

I've forgotten where they worked, but it was someplace that was
doing VHF and above work and a new family of low-loss connectors was
required.

Subject: Ham License in US, the other side...

I recently had the opportunity to administer an extra class
code and written to a HAM of foreign extraction. He is an
accomplished DXer in his homeland and is in MANY stateside
logs. He has been to a few of our VE sessions and takes them
very seriously.

He passed his Code element easily (??!!??) and spent a very long
time on the written. Upon handing it in he told the team how he
was sorry and that he felt that he did not do well. As it ended up he
only missed 5 questions.

Whn he found ot that hepassed he said this:

Now when i see my friends from "the pold country" i can say to them
' i don't know how you got your license, but i know exactly how
i got mine'."

For those of you in the cheap seats..... He worked for it, was tested
on his knowledge, and received operating priveledges as a result.
Before your next posting about how the current licensing system
is too easy, not what it used to be, a "gimme", etc... Keep in mind
that it could be corrupt, closed to may citizens by class, under
military control, ILLEGAL....

No, you do not have to be the next Lee DeForest to get an Extra class
ticket, which is good for most of the amateur community. If you have a better
way to handle it you have to do the work like that done tomake the
changes we see now,. Novice enhancement, No-Code, VE testing, name it
and it was made possible through hard work, not by grousing in a
usenet news group.

Hi Brendan,

I rather doubt that it is the ham plates :-) Money for the city
coffers could come from ham's just as eaisly as from other sources :-)

However, there are some communities where ham's work very closely with
the police, and many officers know the ham's, and MAY tend to cut them
some slack :-) Take care Brendan.

From: brendan@clark.net (Brendan Hoar)
Subject: Hams & cops

I've come to the conclusion that police don't seem to want to pull me
over. Experience after experience of being paced (a warning?) when
speeding but never one ticket. I'm not crazy, but sometimes, just like
almost everyone, I go faster than they think I should.

For example, a Park Service police car paced me going 65 or so on the
George Washington Memorial parkway in VA a couple days ago. I believe
the limit there is 45 or so. Its a nice safe road, but its a parkway,
so the limit is lower. Unfortunately, I didn't notice him (or her)
there for quite a while. When I did, I immediately slowed to 50mph.
Then the cop passed me at 60-65 on my right and zoomed out of sight.

I've seen times where I've come into radar view, the officer has started
the car moving but then stopped as I approached (I slowed as soon as I
realized I was about to be nabbed) and continued about his or her business?

Could it be Ham plates or just plain luck?

Maybe I don't speed as much as I'm afraid I do?

The 46812 MHz, means that he is listening on 4, 6, 8, and 12 MHz. That's the
way the marine band people talk about bands instead of 80, 40, etc meters

In article <3hvop2$24ct@news-s01.ny.us.ibm.net>, rogsc@ibm.net says:
<various VE and no-code gripes deleted>
Does no one recall the Conditional License as I do? Conditionals used to
have the onus of suspicion and rightly so in many cases that they had a
"friend" who "overlooked" various irregularities. In many parts of the
country years back there were HUGE pockets of Conditional licensees, many
husbands who administered tests to their wives, etc, etc... most of who
could not copy CW in any shape or form. I'm convinced the Conditional
license was in fact the first "no-code" and often "no-theory" license.
I know personally of several acquaintances who on one day knew no morse
code or electronics and the next day bragging that they just passed their
license test. One fanatical CB'er I knew had his son go to Albuquerque
and take the test for him. I took FCC tests 2 or 3 times in the "old days"
and don't recall ever being asked to show any form of ID such as is asked
now for VE exams.
Another fairly technical fellow I knew bootlegged a bogus call for quite
a while and when found out (several times) he said he just couldn't learn
Morse code.... then he met a friendly sympathetic ham who administered
the Conditional test to him and VIOLA... now he became legally licensed!
As I recall only ONE (1) ham was required to administer the Conditional
exam so the possibilities for fraudulence were quite high.
Thus, I believe the present VE system is much better in avoiding unqualified
licensees.... Extra Class licensees who don't know anything or little
about electronics notwithstanding. Try to figure out some reasonable way
of coming up with an easily administered test of any kind that actually
ensures only electronically advanced folks can pass. Most tests are
in effect tests of willpower of some sort, not real expertise.

Good point. It's highly unlikely that one could bribe, or otherwise convince three or more volunteer examiners to issue you a fraudulent CSE. Some have argued that the tests have become easier, and that may be true. But the present testing system is probably more credible. (Fewer fraudulent licenses begin issued.)

My only gripe with the present system is that you may retake the exam on the same day. When my brother took his exam last Saturday, he said one woman had to take her no-code tech test twice. So I assume the VE's can keep on giving you tests until you pass. Doesn't this defeat the purpose of the test? Discussion anyone?

Talk about a thread that goes on, and on, and on..... Anyway, as part of the ARRL VE team here in Columbus, OH..... we will offer a second test only if all the graders on the first agree that it looks like the person knows the material, as in only missed passing by a little. The person is given a different test, and must pay the testing fee again. We do not give tests out until the person passes, two is the limit.

The alert tone is a single frequency of (going on somewhat flaky
memory here) 1050 hz. It's definitely not sub-audible! My scanner
apparently just mutes the audio when it's on Alert setting, as I can
still hear the audio faintly if I'm right next to it. When it
senses the tone, it unmutes and stays unmuted until reset, so that if
it goes off while no one's home you know that it happened.

I believe NWS uses all the 25khz channels from 162.4 to 162.55.

Dave:

Although you didn't mention where your brother tested or what the date was,
I took a stab at it and found that he tested at the ARRL/VEC examination in
Frederick MD on 2/11/95.

Michael's Form 610 application was received here at the ARRL/VEC on 2/15, it
was processed and the data was forwarded to the FCC yesterday, 2/16.

According to FCC this morning (800-322-1117), Michael's Technician license
was granted today (2/17) with a call sign of N3UMY.

Please convey our congratulations to him!

>> in avoiding unqualified licensees.... Extra Class licensees who don't

I posted on this subject the other day, but here it is again right
from the 1956 License Manual (well, not word for word, of course; that
takes too much space):

In 1956-57, when I got my Novice and later my Conditional, the rules
were that:

1) Only the General & Extra Class exams were given by the FCC.

2) Anyone wanting a Novice or Technician class *had* to take it
by mail.

3) Those wishing to have General Class privileges who lived more than
75 miles airline from the nearest FCC examining point could
apply for a Conditional Class license and take it by mail.

4) The code test for a Novice, Technician, or Conditional had to
be administered by someone holding a General, Advanced (many
oldtimers still held them even though new ones were not being
issued then), or Extra Class license. Only *one* code examiner
was required, and there was no age limit; i.e., a 12-year old
with a General Class could give the code test.

5) The written exam had to be proctored by *one* person over 21
years of age. That person *did not* have to hold a valid ham
license of any kind.

EXAMPLE: W4BXI, age 16, gave me my Novice code test (I was 15); my
high school principal proctored the Novice written exam.
When I took my Conditional exam, W4FJ gave both the code
and written since he held an Advanced and was *way* over 21!

Obviously, the VE system is *far* superior since it requires extensive
collusion among several individuals to cheat the system - not that it
hasn't happened, mind you, but the odds are much higher against it then in

the old days. If the truth were ever known, I'll bet that there was a lot more "coaching" during written tests given by mail, not to mention code tests that were sent by hand on an oscillator and were closer to 10 wpm than 13, than a lot of hams in my generation would care to admit.

In fact, to be frank, I see little difference between a VE-administered exam and an FCC-administered one. You're in a controlled environment, you're not allowed to cheat, and the results are cut-and-dried: you either pass or you fail. Having taken exams at the FCC office in years gone by (Generl, Advanced, 1st Class Radiotelephone) it seems to be that the only thing missing is the "intimidation" factor of being in the FCC office, although I always found the examiners to be courteous but businesslike, and certainly not nasty, intimidating ogres.

: So in essence what Ed is saying is that he doesn't mind discussion, so long
: as there are no dissenting opinions?

I looked and looked and just didn't see that anywhere in my choice of words.
To recast and expand on my statement a bit, I don't mind discussion and I
welcome dissenting opinions; the most valuable things I have learned in my
life were usually prefaced by "I disagree with you, Ed..."

I just don't like the insults heaped on entire groups of people, for any
reason. They do little to help foster belief in the "dissenting opinion" one
is offering for discussion, they do little to help sway opinion and they
usually sidetrack meaningful discussion into a bout of counter insults and
name calling that most people avoid with their kill file.

From: gcortevi@nyx10.cs.du.edu (Greg Corteville)
Subject: Anybody try TH-79A MARS/CAP mod?

Has anybody tried the MARS/CAP mod for the TH-79A. I got a copy of the
instructions from oak.oakland.edu in /pub/hamradio/mods/kenwood/th79A. I
was wondering if this actually works before I try it. Kenwood tells me
that if its done correctly it won't void my warranty, but they cannot
confirm the directions I have for the mod are in fact correct unless I
have a MARS license. The reason I want to do this is to get full 70cm
coverage (which is what this mod is also supposed to do). Right now the
radio won't go below 438.000. That leaves out almost all of ATV.

Any help would be appreciated.

SB QST ARL ARLB017
ARLB017 RFI changes proposed

RFI changes proposed

The FCC has proposed to permit manufacturers and suppliers of
computers and computer peripherals to market their equipment without
having to apply for equipment certification and await FCC approval,
in ET Docket 95-19.

These devices now must be FCC-certified to ensure that they do not cause interference to radio services, including amateur. Certification requires that all measurement data and a detailed description of the product be submitted to the Commission's laboratory for review and approval.

The certification process can take 35 days or more, the FCC said, and eliminating the wait could save the computer industry some 250 million dollars a year, the industry has said. The FCC called the current regulations ''particularly burdensome for small manufacturers'' and said its proposed new authorization procedure would ''align'' FCC requirements for personal computers with those ''used successfully in other parts of the world.''

Under the proposed new procedure, FCC authorization would be replaced by a process based on a manufacturer's or supplier's Declaration of Conformity (DoC). The Commission also has proposed the option of permitting personal computer compliance to be based on tests and DoCs of individual components, without further testing of completed assemblies.

Most of the newer HT's are modifiable. However, NONE of them are TYPE
ACCEPTED and as such, aren't legal for use on the marine band.

None of the current crop of *amateur* radios can be legally modified
to marine because none of them are Type Accepted for marine use.
However, you can get a Type Accepted *marine* radio and have some
of its channels programmed into the 2 meter ham band. That's perfectly
legal and workable. Icom makes a nice marine radio that could be
so programmed.

IL>telephone..No real skill in doing this is it..But to communicate with
IL>someone who speaks a different language (but the same CW language) is a
IL>skill..To copy someone sending CW when its about five other stations on

Lenny,
This is very interesting! How do you send Chinese in CW?

CW is NOT a language. If I send the Morse character "A" the person receiving it will receive an "A." There is no "A" in Chinese, so, unless the person in Hong Kong reads English he won't have the foggiest idea what you're sending.

If I send "voila" to someone who doesn't read French, it means nothing to him. There's a great difference between sending a series of characters and whether or not the receiver understands the resulting words.

CW is a mode of operation. There is no such thing as a "CW language." CW simply communicates Morse characters which must be understood in the language sent.

Ah yes, the old "back in the good old days..." argument. Can't you come
up with something new Michael D? Your old inflamables just aren't what
they used to be.

And to Michael S, what does that have to do with the no code technician
license? That argument is a condemnation of all the written tests
and has absolutely nothing to do with one class or another. Or are you
suggesting that elements 2 and 3a have some how become cooresponding
easier than elements 3b, 4a, and 4b?

I guess maybe I was the one who didn't read it all. It looks like there
was more to what he said than my newsreader let me see.

From what I read, there was absolutely no mention of "24 hours a day."
Only that every frequency had to be in use at the same time. YOu can
read peak hours or 24 hours a day into it as you want...

Because FM receivers exhibit "capture effect" (the strongest signal will
nearly fully quiet all weaker signals) an emergency/distress call by an
aircraft more distant than another transmitting aircraft would not be
heard, and controllers would not be able to detect doubling (when more
than one station transmits at the same time). It would be pretty
chaotic in a place like the LA basin trying to get through to ARTCC
with FM sigs!!

2182. Elmers list to hemorrhage 60 Elmers?!?! (was Re: Second Biannual Elmers Directory Mass-Ack (Followup))

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-17 18:18:29 UTC
From: pschleck@gonix.com
Message-ID: <pschleck.793045109@gonix>
Source record: 251969
Cross-posted to: rec.radio.amateur.misc,misc.test

I know that in my previous message I promised that the two articles posted to news announcing my biannual house-cleaning of the directory would be my last. However, the extremely low response rate is making me very concerned that I'm having E-mail problems on my end (or that the objectives of the Elmers list are flawed in some way and many of the existing Elmers are either too busy or don't want to be Elmers anymore). There was a configuration problem on my end for about 12 hours on February 2nd that caused some E-mail to bounce, but that has since been fixed.

Based on my last count, the Elmers list on March 1st will be roughly half the size that it was on February 1st. The exodus is big enough that I'm concerned that the context-diffs for the "Changes" article will be over the 64K posting limit. In addition, the deletions reflect a considerable amount of recruiting and editing work on my part that is going to go down the tubes.

If this is the way it goes, I suppose I can live with it (and undertake the recruitment of 60 more Elmers that will also disappear in two-year's time :-). If you are an Elmer, and either this is the first time you've seen this thread, or you have had problems contacting me via E-mail, please try to contact me (again) as soon as possible (you may also want to try calling me at (402) 291-6176 or sending me U.S. Mail to P.O. Box 155, Mount Rainer, MD 20712). While I'd like to discourage purely "closed-circuit" messages posted to news, I've not set the Followup-To: header so that this thread can be further discussed on rec.radio.amateur.misc, if you wish.

Hope to hear from more of you soon.

2183. GB2RS News 19th February 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-17 19:17:53 UTC
From: dave@llondel.demon.co.uk
Message-ID: <793073873snx@llondel.demon.co.uk>
Source record: 251971
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 19th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

This week marks an important anniversary in the world of radio. It was on the 23rd of February 1895 that Guglielmo Marconi in Italy successfully transmitted for the first time. A new beacon marking the centenary of his tests and using the callsign I1M is now transmitting on 21.151 MHz. After moving to England, Marconi used a site at Alum Bay on the Isle of Wight for the first transmissions to a ship at sea. The West Wight Radio Society has recently obtained a permanent special event callsign, GB2GMM, for a station located at this site.

Thinking Day on the Air, when Guides throughout the world are able to communicate using amateur radio, started yesterday, Saturday the 18th and continues today. Well over two hundred UK stations are operational using the GB prefix, as well as many using the special club prefixes.

The RSGB Repeater Management Group is looking for an editor for their occasional newsletter, Repeater Report, which is sent to all UK repeater groups. Applications should be sent to the Repeater Management Group Chairman, Geoff Dover, G4AFJ, whose address is correct in the latest RSGB Callbook.

A GB2CW RSGB Morse practice transmission is available each week in the Huntingdon area. The sender is G4LHI who will operate at 7.00 pm local time each Tuesday on 145.225 MHz using FM.

The RSGB Liaison Officer for the Shetlands is Robert Miles, GM4CAQ, whose address is correct in the current RSGB Call Book. RLOs hold a wide range of information and are available to advise RSGB members.

The Kuwait National and Liberation Days are on the 25th and 26th February, and Kuwaiti stations may add the suffix stroke NLD after their callsigns from 0001 UTC on 25th February until the end of the month. The Kuwait Amateur Radio Society is offering an award to amateurs who contact three Kuwaiti stations during this period. The K.A.R.S. club station, 9K2RA/NLD, will be active and counts as two contacts. The award is also available on a heard basis for SWLs.

Now some other items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Antigua, Ratko, YU1NR will sign V29NR from Thursday the 23rd of February until the 3rd of March. Activity will be on all bands, SSB only. Check these frequencies:- 1.845, 3.795, 7.095, 14.193, 21.295 and

28.595MHz. There may also be activity on the WARC bands.

From Namibia, DL7UTR and DL7UUO will sign V5/own calls from around Friday the 24th February until the 19th of March. Activity will be on all bands using high power to vertical and wire antennas.

And from the Comoros - D68 - Marcel, ON4QM, will be active from around the 20th February for two months on all bands 40 to 10 metres, SSB only.

Next the Rally News:

The RSGB VHF Convention takes place today, Sunday the 19th, at the usual venue, Sandown Exhibition Centre, near Esher in Surrey. Featured are trade stands, a full lecture programme on VHF, UHF and Microwave subjects, specialist groups, Morse tests, trophy presentations and an RSGB book and information stand. Doors open at 10.30 am. Refreshments are available and there is ample car parking. Talk-in is by GB2VHF on channels S22 and SU22. Full details of the lecture programme and a map can be found in the February edition of Radio Communication.

Next Saturday, the 25th of February, the Tyneside Amateur Radio Society rally will take place at the Temple Park Centre, John Reid Road, South Shields. The doors open at 11.00 am, with disabled visitors being admitted from 10.30 am. All the usual traders will be there, as will an RSGB book stand. Morse tests will be held on request, but don't forget to take two passport-size photographs along if you wish to take your test at the rally. There will be a talk-in station on S22 from 8.00 am and there is ample car parking, with special arrangements for disabled drivers. Further information is available from Stuart, G0BSV, on 0191 281 0999.

Also on Saturday the 25th February, the Rainham Radio Rally will be held at Rainham School for Girls, Derwent Way, Rainham, Gillingham, in Kent. Doors open at 10.00 am, or 9.30 am for disabled visitors. Further information from Martin, G7JBO, on 01634 365980.

On Sunday the 26th February, the Barry Mobile Rally will take place at the Barry Leisure Centre, off Holton Road, Barry. Doors open at 10.30 am. Enquiries to Margaret, GW4GSH, on 01446 738756.

Also on Sunday the 26th, the Taw and Torridge Rally will take place at Bideford Hall, The Pill, adjacent to Victoria Park, Bideford, North Devon. Doors open at 10.30 am. For further details, please contact Mike, G3PGA, on 01271 860930.

On Saturday the 4th of March, the Aberystwyth and District Amateur Radio Society will be holding their rally at Aberaeron School, Aberaeron, in Dyfed. Details may be obtained from Katy, GW0SFO on 01545 580675.

Finally, the Mid Cheshire Amateur Radio Society has informed us that they have had to cancel their rally, which was planned for Bank Holiday Monday, the 8th of May.

Now for the HF contest news:

The ARRL DX CW Contest is taking place until 2359 UTC tonight on all HF bands, excluding the WARC bands. Contact only USA and Canadian stations and send RST followed by your power.

Next weekend, Saturday the 25th of February and Sunday the 26th, the RSGB 7MHz CW contest takes place. The contest starts at 1500 UTC on the Saturday and ends at 0900 on the Sunday morning. Send RST, a serial number, and your County Code. The full rules were published in the November 1994 RadCom and the county codes are in the January edition.

Other contests taking place next weekend include the CQ World Wide 160-metre SSB contest, which starts at 2200 UTC on the Friday evening, 24th of February, and the REF French SSB and Belgian UBA CW contest, both of which take place on Saturday and Sunday. Brief rules for all these contests have been published in recent issues of RadCom.

Next some VHF contest news:

Next Sunday, the 26th, sees another event in the 70MHz Cumulative Contest which takes place between 1000 and 1200 UTC. The rules can be found in the January RadCom.

Also on the 26th is another event in the Winter Microwaves Cumulative contest, between 0900 and 2100 UTC on all bands from 2.3 GHz up. The rules are in the November 1994 RadCom.

The RSGB VHF Contests Committee has received several requests for the inclusion of a 6 metre section in VHF National Field Day. The committee is willing to consider this, but only as an alternative to 4 metres, not as an addition. Changes could be made in time for the 1995 event if RSGB members express their views in writing before the end of February. Write to the Chairman, David Johnson G4DHF, at the address in the RSGB Call Book. Members' opinions will also be sought today at the RSGB VHF Convention.

And now the solar factual data:

The period from the 6th to the 12th of February saw solar activity at very low levels. There was a slight decline in sunspots and solar flux levels; geomagnetic levels were mostly quiet but did increase to active levels on the 8th. Sunspot numbers declined from 55 on the 6th to 24 on the 12th, and mean for the period was 39. Solar flux levels also declined slightly from 84 units on the 6th to 81 units by the 12th. The average for the period was 83 units. Only one weak solar flare took place during the period, that was a B1.1/SF on the 11th. The electron fluence declined every day and by the end of the period returned to moderate levels. The X-Ray flux increased slightly at the start of the period to peak at B1.5 units on the 9th and then declined to end the period at A4.3 units. The average for the period was A8.1 units. The 90 day solar flux average on the 12th was 83 units.

Geomagnetic activity was mostly quiet with levels as low as Ap 3 units on the 10th. The most disturbed day was the 8th with an Ap index of 29 units, the average for the period was Ap 13 units. The state has been

'nil, nothing to report' for the period, except for the 8th when it was 'mag alert'.

The aa indices as reported by the British Geological Survey for the period from the 31st of January to the 6th of February declined from unsettled levels of 44.5 nanoTeslas on the 31st to quiet levels with only 8.2 nanoTeslas on the 5th. The average for the period was 31.4 nanoTeslas, about K3. The monthly RI sunspot number for January was 23.8, with a maximum of 55 on the 21st and a minimum of 7 on the 7th. The smoothed monthly sunspot number for July 1994 was RI 28.5, +/-5.

I'll repeat the figures: Spots --39; Flux-- 83; Ap index - 13; X-Ray flux - -A8.1; January RI spots - 23.8.

Now the ionospheric data for Central France.

Following the problems reported last week we are glad to announce that the ionospheric data is available again. The F2 daytime critical frequencies, as reported by Meudon for the period from the 3rd to the 9th of February, averaged 7.1MHz with the 6th being by far the best day at 9.0MHz. The darkness hour lows increased from 1.9 MHz on the 3rd to 2.6 MHz by the 7th, with the average for the period at 2.2 MHz. Spread F was reported most early mornings and lasted 10 hours on the 6th. The daytime highs are taking place between 10.00 and 14.00 hours, with the darkness hour lows between 22.00 hours and 06.00 hours.

And lastly the solar forecast.

This week the more active side of the sun is expected to be rotating away, so solar activity could be at low levels. Solar flux is expected to decline throughout the period. Geomagnetic levels are expected to be mostly quiet for most of the week, but may increase to active levels next weekend due to a recurring coronal hole. Ionospheric MUFs in the south are expected to be about 20 MHz during daylight hours. The darkness hour lows may show a slight improvement as the nights start to shorten in the northern hemisphere and be up to 8 MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Sierra and G7 Uniform November series, and Novice calls in the 2 0 Alfa Juliet and 2 1 Delta Tango series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

The mode for the HTX-404 is well described in the operating
manual that comes with the radio. If you ned another manual
You can order one through Radio Shack Comsumer Parts. I dont
know the exact price, but would guess about 10 bux!

Hello All:

I enjoy RTTY mode. I have kenwood TS450S radio, home brew interface and 486 computer. Sometimes I get lots of static. Sometimes interference from other stations. I would like to know what is best way to get better signal and avoid the static and interference. Which one is better, SSb filter to radio or cw filter to radio or DSP like Timewave DSP9, DSP9+ or DSP59+.

I would like to have your suggestions before I invest my money in these things.

Thank you very much for your time and suggestions.

Hi

I am looking for information and schematics on modifying
an ICOM 4AT that is in the upper UHF segment of the Band
(440.0 up) to the lower segment (436.0 ? - 439.99) There
were a few different chasis built for these bands,
and I would like to change the parts required and retune it
to cover 436 - 439.

I will pay for shipment and reasonable copy expenses.

If someone performes this types of modifications
for a living, I would also appreciate their
info, as I might consider paying someone to do this.

Thanks

Maurice

From Tad Cook, KT7H
Seattle, WA February 17, 1995
To all radio amateurs

SB PROP ARL ARLP008
ARLP008 Propagation de KT7H

Recent 160 meter conditions top the news this week. K7SS reports that on January 29 during the CQ WW 160 meter contest, W7XR worked OH7MS on long path at 1428z. This was 80 minutes before local sunrise at W7XR, and signals were strongest on a beverage antenna to the west. K7SS thought that this was the first 160 meter long path contact to Europe from North America, but it now appears that N6SS beat this record by 20 minutes, when he worked OH7MS at 1408z. With W7XR and K7SS in Washington State, and N6SS in Arizona, N6SS worked OH7MS 6 minutes before local sunrise and W7XR worked him 80 minutes before his local sunrise. Congratulations to all.

Comments to the author of this bulletin can be sent via packet to KT7H N7DUO.WA.US or via internet to tadssc.com.

Solar flux last week was unchanged from the week prior. Conditions were unstable on the 11th through the 14th, with many periods of K indices at 5 or 6. The A index peaked at 33 on the 13th.

Solar flux should peak around 96 on the 19th, then head back to the mid eighties region. Active geomagnetic conditions due to recurring coronal holes are expected to begin again around February 26, and gradually increase through mid-March.

Sunspot Numbers for February 9 through 15 were 24, 38, 23, 24, 26, 36 and 36, with a mean of 29.6. 10.7 cm flux was 83.7, 81.5, 81.1, 81.1, 85.7, 82.4 and 84.9, with a mean of 82.9.

The path projection for this week is from Hawaii and Anchorage, Alaska to Macao.

From Anchorage, 80 meters looks good from 1045 to 1900z, and 40 meters from 0930 to 2030. 30 meters should be good around 1900 to 2000 and again from 2200 to 2300 and around 0800. Check 20 meters

from 2230 to 0230, and 17 meters from 2300 to 0300. 15 meters may be open on some days from 2300 to 0230.

From Hawaii, 80 meters looks like a good bet from 1030 to 1730z, and 40 meters from 0900 to 1830. 30 meters looks good from 0800 to 1930, and 20 meters from 2230 to 2330 and 0400 to 1430. Strongest 20 meter signals should be between 0900 and 1300. 17 meters should be open from 2230 to 0700, and 15 meters from 2300 to 0630. 10 and 12 meters look quite good over this path, with 10 meters open from 2330 to 0500, and 12 meters opening 30 minutes earlier and closing about an hour later.

My friend is an amatuer radio operator, I am a pc person. We were wondering if there is a frequency for ham operators that they can transmitt morse code on to a certain repeater. At the repeater it would then decode the morse code into a text format and be able to send it back out to a receiver on the Internet?

>I hope not every Amateur is so apathetic.

It isn't necessarily apathy, I know Graham to be not what I would consider
apathetic.

There comes a time where you have to judge the relative value of maintaining
and existing arrangement that doesn't work in exchange for the risk
associated with a completely new arrangement.

Amateur Radio adds very little value. For people that have a real desire
to experiment it is too difficult to rally the support needed to gather
the resources necessary to get decent experiments off the ground. The
commmercial companies are far far advanced on what the amateur communities
are doing, we aren't ahead of the race, we're falling behind, and further
and further every year.

> by mail.

I was led to believe (in the 60's when I was first licensed) that
there was one circumstance that could lead to getting a Tech license
via the FCC examiner: if you were being tested for General, and failed
to pass the code because you did not have 65 letters in a row right,
but _did_ have 25 in a row, the examiner could give you credit for the
5 wpm requirement for Tech. Then, you could take the written, and if you
passed, you would get a Tech license. I don't recall now if I read
this in an ARRL book, or was just told it by one of the old-timers, so
it may be nothing more than someone's flight of fancy...

Solar flux last week was unchanged from the week prior. Conditions
were unstable on the 11th through the 14th, with many periods of K
indices at 5 or 6. The A index peaked at 33 on the 13th.

Solar flux should peak around 96 on the 19th, then head back to the
mid eighties region. Active geomagnetic conditions due to recurring
coronal holes are expected to begin again around February 26, and
gradually increase through mid-March.

Sunspot Numbers for February 9 through 15 were 24, 38, 23, 24, 26,
36 and 36, with a mean of 29.6. 10.7 cm flux was 83.7, 81.5, 81.1,
81.1, 85.7, 82.4 and 84.9, with a mean of 82.9.

The path projection for this week is from Hawaii and Anchorage,
Alaska to Macao.

From Anchorage, 80 meters looks good from 1045 to 1900z, and 40
meters from 0930 to 2030. 30 meters should be good around 1900 to
2000 and again from 2200 to 2300 and around 0800. Check 20 meters
from 2230 to 0230, and 17 meters from 2300 to 0300. 15 meters may
be open on some days from 2300 to 0230.

From Hawaii, 80 meters looks like a good bet from 1030 to 1730z, and
40 meters from 0900 to 1830. 30 meters looks good from 0800 to
1930, and 20 meters from 2230 to 2330 and 0400 to 1430. Strongest
20 meter signals should be between 0900 and 1300. 17 meters should
be open from 2230 to 0700, and 15 meters from 2300 to 0630. 10 and
12 meters look quite good over this path, with 10 meters open from
2330 to 0500, and 12 meters opening 30 minutes earlier and closing
about an hour later.

Subject: Chat from pc to Ham radio via code?

My friend is an amatuer radio operator, I am a pc person. We were
wondering if there is a frequency for ham operators that they can
transmitt morse code on to a certain repeater. At the repeater it would
then decode the morse code into a text format and be able to send it back
out to a receiver on the Internet?

Subject: Help with IC4AT Band modification - PLS

Hi

I am looking for information and schematics on modifying
an ICOM 4AT that is in the upper UHF segment of the Band
(440.0 up) to the lower segment (436.0 ? - 439.99) There
were a few different chasis built for these bands,
and I would like to change the parts required and retune it
to cover 436 - 439.

I will pay for shipment and reasonable copy expenses.

If someone performes this types of modifications
for a living, I would also appreciate their
info, as I might consider paying someone to do this.

Thanks

Maurice

Dave:

Although you didn't mention where your brother tested or what the date was,
I took a stab at it and found that he tested at the ARRL/VEC examination in
Frederick MD on 2/11/95.

Michael's Form 610 application was received here at the ARRL/VEC on 2/15, it
was processed and the data was forwarded to the FCC yesterday, 2/16.

According to FCC this morning (800-322-1117), Michael's Technician license
was granted today (2/17) with a call sign of N3UMY.

Please convey our congratulations to him!

The standard is 1020 or 1050hz (what's the difference!) for about 8 seconds. I
know people have built decoders for this- proably 73, Ham Radio Magazine, or
QST has had articles on construction- but I forget when/where.

PRB-1 means very little here.

In my best recollection, the local Appellate Court made PRB-1 actions
very weak here in our Circuit....it was a case of maybe 5 years
ago and the Court seemed to say that Federal law (PRB-1) didn't
really require a municipality to allow a tower of any type. That
was the tone of the decision. The actual rule of the case did
not seem to completely dictate a local Federal Court taking that stance
though. (My optimism showing through.)

I can get the name of the case and give a synopsis if you like.

Subject: GB2RS News 19th February 1995

Good morning. It's Sunday the 19th of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

This week marks an important anniversary in the world of radio. It was on the 23rd of February 1895 that Guglielmo Marconi in Italy successfully transmitted for the first time. A new beacon marking the centenary of his tests and using the callsign I1M is now transmitting on 21.151 MHz. After moving to England, Marconi used a site at Alum Bay on the Isle of Wight for the first transmissions to a ship at sea. The West Wight Radio Society has recently obtained a permanent special event callsign, GB2GMM, for a station located at this site.

Thinking Day on the Air, when Guides throughout the world are able to communicate using amateur radio, started yesterday, Saturday the 18th and continues today. Well over two hundred UK stations are operational using the GB prefix, as well as many using the special club prefixes.

The RSGB Repeater Management Group is looking for an editor for their occasional newsletter, Repeater Report, which is sent to all UK repeater groups. Applications should be sent to the Repeater Management Group Chairman, Geoff Dover, G4AFJ, whose address is correct in the latest RSGB Callbook.

A GB2CW RSGB Morse practice transmission is available each week in the Huntingdon area. The sender is G4LHI who will operate at 7.00 pm local time each Tuesday on 145.225 MHz using FM.

The RSGB Liaison Officer for the Shetlands is Robert Miles, GM4CAQ, whose address is correct in the current RSGB Call Book. RLOs hold a wide range of information and are available to advise RSGB members.

The Kuwait National and Liberation Days are on the 25th and 26th February, and Kuwaiti stations may add the suffix stroke NLD after their callsigns from 0001 UTC on 25th February until the end of the month. The Kuwait Amateur Radio Society is offering an award to amateurs who contact three Kuwaiti stations during this period. The K.A.R.S. club station, 9K2RA/NLD, will be active and counts as two contacts. The award is also available on a heard basis for SWLs.

Now some other items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Antigua, Ratko, YU1NR will sign V29NR from Thursday the 23rd of February until the 3rd of March. Activity will be on all bands, SSB only. Check these frequencies:- 1.845, 3.795, 7.095, 14.193, 21.295 and 28.595MHz. There may also be activity on the WARC bands.

From Namibia, DL7UTR and DL7UUO will sign V5/own calls from around Friday the 24th February until the 19th of March. Activity will be on

all bands using high power to vertical and wire antennas.

And from the Comoros - D68 - Marcel, ON4QM, will be active from around the 20th February for two months on all bands 40 to 10 metres, SSB only.

Next the Rally News:

The RSGB VHF Convention takes place today, Sunday the 19th, at the usual venue, Sandown Exhibition Centre, near Esher in Surrey. Featured are trade stands, a full lecture programme on VHF, UHF and Microwave subjects, specialist groups, Morse tests, trophy presentations and an RSGB book and information stand. Doors open at 10.30 am. Refreshments are available and there is ample car parking. Talk-in is by GB2VHF on channels S22 and SU22. Full details of the lecture programme and a map can be found in the February edition of Radio Communication.

Next Saturday, the 25th of February, the Tyneside Amateur Radio Society rally will take place at the Temple Park Centre, John Reid Road, South Shields. The doors open at 11.00 am, with disabled visitors being admitted from 10.30 am. All the usual traders will be there, as will an RSGB book stand. Morse tests will be held on request, but don't forget to take two passport-size photographs along if you wish to take your test at the rally. There will be a talk-in station on S22 from 8.00 am and there is ample car parking, with special arrangements for disabled drivers. Further information is available from Stuart, G0BSV, on 0191 281 0999.

Also on Saturday the 25th February, the Rainham Radio Rally will be held at Rainham School for Girls, Derwent Way, Rainham, Gillingham, in Kent. Doors open at 10.00 am, or 9.30 am for disabled visitors. Further information from Martin, G7JBO, on 01634 365980.

On Sunday the 26th February, the Barry Mobile Rally will take place at the Barry Leisure Centre, off Holton Road, Barry. Doors open at 10.30 am. Enquiries to Margaret, GW4GSH, on 01446 738756.

Also on Sunday the 26th, the Taw and Torridge Rally will take place at Bideford Hall, The Pill, adjacent to Victoria Park, Bideford, North Devon. Doors open at 10.30 am. For further details, please contact Mike, G3PGA, on 01271 860930.

On Saturday the 4th of March, the Aberystwyth and District Amateur Radio Society will be holding their rally at Aberaeron School, Aberaeron, in Dyfed. Details may be obtained from Katy, GW0SFO on 01545 580675.

Finally, the Mid Cheshire Amateur Radio Society has informed us that they have had to cancel their rally, which was planned for Bank Holiday Monday, the 8th of May.

Now for the HF contest news:

The ARRL DX CW Contest is taking place until 2359 UTC tonight on all HF bands, excluding the WARC bands. Contact only USA and Canadian stations and send RST followed by your power.

Next weekend, Saturday the 25th of February and Sunday the 26th, the RSGB 7MHz CW contest takes place. The contest starts at 1500 UTC on the Saturday and ends at 0900 on the Sunday morning. Send RST, a serial number, and your County Code. The full rules were published in the November 1994 RadCom and the county codes are in the January edition.

Other contests taking place next weekend include the CQ World Wide 160-metre SSB contest, which starts at 2200 UTC on the Friday evening, 24th of February, and the REF French SSB and Belgian UBA CW contest, both of which take place on Saturday and Sunday. Brief rules for all these contests have been published in recent issues of RadCom.

Next some VHF contest news:

Next Sunday, the 26th, sees another event in the 70MHz Cumulative Contest which takes place between 1000 and 1200 UTC. The rules can be found in the January RadCom.

Also on the 26th is another event in the Winter Microwaves Cumulative contest, between 0900 and 2100 UTC on all bands from 2.3 GHz up. The rules are in the November 1994 RadCom.

The RSGB VHF Contests Committee has received several requests for the inclusion of a 6 metre section in VHF National Field Day. The committee is willing to consider this, but only as an alternative to 4 metres, not as an addition. Changes could be made in time for the 1995 event if RSGB members express their views in writing before the end of February. Write to the Chairman, David Johnson G4DHF, at the address in the RSGB Call Book. Members' opinions will also be sought today at the RSGB VHF Convention.

And now the solar factual data:

The period from the 6th to the 12th of February saw solar activity at very low levels. There was a slight decline in sunspots and solar flux levels; geomagnetic levels were mostly quiet but did increase to active levels on the 8th. Sunspot numbers declined from 55 on the 6th to 24 on the 12th, and mean for the period was 39. Solar flux levels also declined slightly from 84 units on the 6th to 81 units by the 12th. The average for the period was 83 units. Only one weak solar flare took place during the period, that was a B1.1/SF on the 11th. The electron fluence declined every day and by the end of the period returned to moderate levels. The X-Ray flux increased slightly at the start of the period to peak at B1.5 units on the 9th and then declined to end the period at A4.3 units. The average for the period was A8.1 units. The 90 day solar flux average on the 12th was 83 units.

Geomagnetic activity was mostly quiet with levels as low as Ap 3 units on the 10th. The most disturbed day was the 8th with an Ap index of 29 units, the average for the period was Ap 13 units. The state has been 'nil, nothing to report' for the period, except for the 8th when it was 'mag alert'.

The aa indices as reported by the British Geological Survey for the period from the 31st of January to the 6th of February declined from unsettled levels of 44.5 nanoTeslas on the 31st to quiet levels with only 8.2 nanoTeslas on the 5th. The average for the period was 31.4 nanoTeslas, about K3. The monthly RI sunspot number for January was 23.8, with a maximum of 55 on the 21st and a minimum of 7 on the 7th. The smoothed monthly sunspot number for July 1994 was RI 28.5, +/-5.

I'll repeat the figures: Spots --39; Flux-- 83; Ap index - 13; X-Ray flux - -A8.1; January RI spots - 23.8.

Now the ionospheric data for Central France.

Following the problems reported last week we are glad to announce that the ionospheric data is available again. The F2 daytime critical frequencies, as reported by Meudon for the period from the 3rd to the 9th of February, averaged 7.1MHz with the 6th being by far the best day at 9.0MHz. The darkness hour lows increased from 1.9 MHz on the 3rd to 2.6 MHz by the 7th, with the average for the period at 2.2 MHz. Spread F was reported most early mornings and lasted 10 hours on the 6th. The daytime highs are taking place between 10.00 and 14.00 hours, with the darkness hour lows between 22.00 hours and 06.00 hours.

And lastly the solar forecast.

This week the more active side of the sun is expected to be rotating away, so solar activity could be at low levels. Solar flux is expected to decline throughout the period. Geomagnetic levels are expected to be mostly quiet for most of the week, but may increase to active levels next weekend due to a recurring coronal hole. Ionospheric MUFs in the south are expected to be about 20 MHz during daylight hours. The darkness hour lows may show a slight improvement as the nights start to shorten in the northern hemisphere and be up to 8 MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Sierra and G7 Uniform November series, and Novice calls in the 2 0 Alfa Juliet and 2 1 Delta Tango series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

>>
>> As I recall only ONE (1) ham was required to administer the
>> Conditional exam so the possibilities for fraudulence were
>> quite high. Thus, I believe the present VE system is much better
>> in avoiding unqualified licensees.... Extra Class licensees who don't

I posted on this subject the other day, but here it is again right from the 1956 License Manual (well, not word for word, of course; that takes too much space):

In 1956-57, when I got my Novice and later my Conditional, the rules were that:

1) Only the General & Extra Class exams were given by the FCC.

2) Anyone wanting a Novice or Technician class *had* to take it by mail.

3) Those wishing to have General Class privileges who lived more than 75 miles airline from the nearest FCC examining point could apply for a Conditional Class license and take it by mail.

4) The code test for a Novice, Technician, or Conditional had to be administered by someone holding a General, Advanced (many oldtimers still held them even though new ones were not being issued then), or Extra Class license. Only *one* code examiner was required, and there was no age limit; i.e., a 12-year old with a General Class could give the code test.

5) The written exam had to be proctored by *one* person over 21 years of age. That person *did not* have to hold a valid ham

license of any kind.

EXAMPLE: W4BXI, age 16, gave me my Novice code test (I was 15); my
high school principal proctored the Novice written exam.
When I took my Conditional exam, W4FJ gave both the code
and written since he held an Advanced and was *way* over 21!

Obviously, the VE system is *far* superior since it requires extensive
collusion among several individuals to cheat the system - not that it
hasn't happened, mind you, but the odds are much higher against it then in
the old days. If the truth were ever known, I'll bet that there was a lot
more "coaching" during written tests given by mail, not to mention code
tests that were sent by hand on an oscillator and were closer to 10 wpm than
13, than a lot of hams in my generation would care to admit.

In fact, to be frank, I see little difference between a VE-administered
exam and an FCC-administered one. You're in a controlled environment,
you're not allowed to cheat, and the results are cut-and-dried: you either
pass or you fail. Having taken exams at the FCC office in years gone by
(Generl, Advanced, 1st Class Radiotelephone) it seems to be that the only
thing missing is the "intimidation" factor of being in the FCC office,
although I always found the examiners to be courteous but businesslike,
and certainly not nasty, intimidating ogres.

: So in essence what Ed is saying is that he doesn't mind discussion, so long
: as there are no dissenting opinions?

I looked and looked and just didn't see that anywhere in my choice of words. To recast and expand on my statement a bit, I don't mind discussion and I welcome dissenting opinions; the most valuable things I have learned in my life were usually prefaced by "I disagree with you, Ed..."

I just don't like the insults heaped on entire groups of people, for any reason. They do little to help foster belief in the "dissenting opinion" one is offering for discussion, they do little to help sway opinion and they usually sidetrack meaningful discussion into a bout of counter insults and name calling that most people avoid with their kill file.

2198. AOR AR3000 computer interface

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-18 18:27:25 UTC
From: Roberto Salama <rs@tudor.com>
Message-ID: <D47KLq.IBJ@tudor.com>
Source record: 251861

Does someone know if there is a more comprehensive list of commands
for controlling the ar3000 through a RS232 connection? For example,
you can set the frequency step increment, but there in no command
for telling it to start scanning. Also, the program that AOR sells for
a PC seems to record .wav files, and since the hardware requirements
call for only one com port, the ar3000 must be sending audio through
the RS232 connection.

Any help/pointers would be appreciated, as I am trying to write a
SUN/Motif based interface for the ar3000.

How about a new, "no test" license. How about anyone who has the money just buy a rig and cause mayhem on all of the bands.

In fact, the heck with rules of anykind, lets have a free for all.

Give me a break, really. Go back to CB where you belong.

Just MY opinion.

2204. Re: AD370 Active Antenna Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-18 19:53:06 UTC
From: R.RADERMACHER@rrader.dinoco.de
Message-ID: <vRl4yMD2E9aLz3@r.radermacher.rrader.dinoco.de>
Source record: 251847

On 12.02.1995 you wrote
Re: "AD370 Active Antenna Question"

DL> Has anyone every used the AD370 active antenna sold thru EEB. I live in
DL> an apartment so am stuck with various makeshift small antenna solutions.
DL> I heard this was one of the best - is it? Thanks in advance.

Hello David,

I, for one, have been using a AD370, for the last six years in combination with various receivers, i.e. a Kenwood R5000, R820, TS440 (RX only) and now a EKD 315, a professional RX made by RFT of former East Berlin.

In my opinion, this is still the best active antenna available at this price. I have also been using a Rohde & Schwarz HE 011 since last June and although this one is in the 400 quid range, it is certainly not as much better as it is expensive.

If you are using the antenna inside your flat (only to be recommended if REALLY all else fails), you may as well buy the AD 270, which is electrically identical but not weatherproof and a few pounds cheaper.

To give you an idea of its performance, I have mainly used it for Utility DX with HF fax being one of my favourites. Stations like Darwin Meteo, Halifax, Buenos Aires, Tokyo and the like are no problem. If they're there and the condx let them get through, I hear them.

The only slight problem I am having with it is a wee bit of intermod caused by two nearby VHF transmitters, one being the local police and the other one a local FM broadcast station. The difference in freq of these two stations happens to be 14.1 MHz, and every time the coppers key their TX, I get wideband FM noise on 20 meters. But given that both transmitters are a mere 1/2 mile away and the antenna literally sees them, I don't consider this a real weakness of the aerial.

Oh, and one more thing: I had a lot of computer noise, in the beginning. A thin layer of sheet copper inside the preamp unit which has a plastic box cured this to the extent of making it almost inaudible.

Hope this helps. I you have any further questions you'll know to find me.

73,
Ralf

P.S.: I seem to be having an odd problem with my system and I suspect that my PMs are getting through but my normal messages never make it into the newsgroups. It would be most kind if all of you could keep a lookout and report by a short PM when someone has spotted this same message within

radio/amateur/misc.
Thank you.

>>and there is no receive audio.
>>the interesting this is if I leave the radio power switch on and turn on the power supply
>>the display lights up and there is receive audio.
>>
Or, it could be your power supply is going into overcurrent crowbar when the radio is turned on AFTER the PS, while turning the PS on while the radio is on allows you to get past the crobar phase. Sounds pretty wierd, but your supply may not like the initial surge, treating it as overcurrent.

The other postings also have very good info on possible problems. All the help you need!

From: stevem@zimmer.CSUFresno.EDU (Steve Mitchell)
Subject: AM vs. FM -> Aircraft?

Recently I've talked to a couple of pilots as to why the aircraft bands
are all AM. They said that it's just tradition. I thought that the AM
could be received over longer distances than FM, and that that was the
reason.

Can anybody here confirm or deny this?

Thanks.

Subject: HELP... RTTY and filters... PLEASE..

Hello All:

I enjoy RTTY mode. I have kenwood TS450S radio, home brew interface and
486 computer. Sometimes I get lots of static. Sometimes interference
from other stations. I would like to know what is best way to get
better signal and avoid the static and interference. Which one is
better, SSb filter to radio or cw filter to radio or DSP like Timewave
DSP9, DSP9+ or DSP59+.

I would like to have your suggestions before I invest my money
in these things.

Thank you very much for your time and suggestions.

The mode for the HTX-404 is well described in the operating
manual that comes with the radio. If you ned another manual
You can order one through Radio Shack Comsumer Parts. I dont
know the exact price, but would guess about 10 bux!

The alert tone is a single frequency of (going on somewhat flaky memory here) 1050 hz. It's definitely not sub-audible! My scanner apparently just mutes the audio when it's on Alert setting, as I can still hear the audio faintly if I'm right next to it. When it senses the tone, it unmutes and stays unmuted until reset, so that if it goes off while no one's home you know that it happened.

I believe NWS uses all the 25khz channels from 162.4 to 162.55.

> Subject: Elmers list to hemorrhage 60 Elmers?!?!

The first message was yet another personal attack against Jeff Angus,
jangus@skyld.grendel.com. The second message detailed that half of the

Elmer's list no longer wants to be active.

You have seen Jeff's angry postings against certain parties who constantly bait with attacks on the no code techs. While I find Jeff's momentary lapse into obscene language as unacceptable as anybody else, I know something about Mr. Angus that you don't. You see, Jeff is *MY* Elmer. Jeff is the one who answered my 10:00 at night questions about antenna grounds. He gave me my power supply. Etc. Etc. Etc.

The number of Elmers is dropping. That is because some are being shot down by the flames of people who don't care enough to help, only to attack. Jeff really cares about amateur radio and helping other people, and I am sick of seeing the attacks against him.

The Star Trek columns are familiar with IDIC, infinite Diversity in Infinite Combinations. Why isn't amateur radio? I am now a general, and I exclusively work CW. Many amateur radio purists would feel at home in my station, with low power, improvised equipment. Yet, that does not give me, or any other operator, the right to look their nose down at someone else who participates in amateur radio only on other modes.

In addition to being a service, which should mean Esprit De Corps, amateur radio is a game which we all should be playing by the same rules. The rules are Part 97 of the FCC code. If someone violates those rules by ignorance, correct them with love and kindness. If they follow the rules, accept them as a full fledged member of the family and the service.

If you want high standards to be maintained, if you want amateur radio to be changed, please do so by EXAMPLE. Instead of deriding the neophyte who bubbles with pride at being able to use an HTX-202 to talk through a repeater 20 miles away, spend the TIME to teach them corect procedure and courtesy within their license class and interests. And, while you are at it, you can transmit your enthusiasm as you show them new horizons to travel to.

I challenge all of you who have been flaming Jeff Angus to join the Elmer's list. Put up or shut up, please. As for me, I will merely quietly teach a class through my religious denomination on how to pass the no code tech license for members who want to start an earthquake emergency net.

It isn't necessarily apathy, I know Graham to be not what I would consider
apathetic.

There comes a time where you have to judge the relative value of maintaining and existing arrangement that doesn't work in exchange for the risk associated with a completely new arrangement.

Amateur Radio adds very little value. For people that have a real desire to experiment it is too difficult to rally the support needed to gather the resources necessary to get decent experiments off the ground. The commmercial companies are far far advanced on what the amateur communities are doing, we aren't ahead of the race, we're falling behind, and further and further every year.

: 1. I'm currently studying for my 1B 13wpm code test, and seem to be "hitting
: the wall" at about 8-9 wpm. Do any of you CW gods out there have any
: strategies that you found effective for increasing code speed? (Besides
: copying till your ears bleed, which I'm already doing.) :)

That's not an unusual speed for "the wall". Copying code is quite different from one side of the wall to the other. Up to about ten wpm, you can copy just fine by consciously *translating* what you hear into the corresponding letter. Above that speed, you really have to eliminate the translation step. The sound *is* the letter. It's similar to the difference between "hunt-and-peck" and touch-typing.

I got past the "wall" just by operating a lot, and mostly CW. It was my mode of choice (and the FCC's back then!) so I wasn't approaching it the way many people do today and it was fun. One day, the wall was just gone. I seem to remember it the same way I remember finally learning to ride a bike...all of a sudden, the balance was just *there*, and then it seemed so easy.

Bottom line: Operate CW a lot, don't just listen to tapes or computer programs (that's work). Listen to faster code than you can copy and pick out what you can. Don't work at it too hard, just let it flow and relax.

I know that's pretty fuzzy advice...but if I could give you a better answer than that, I'd be rich!

Good luck!

> strategies that you found effective for increasing code speed? (Besides
> copying till your ears bleed, which I'm already doing.) :)

I'm working on getting to 20, after passing the exam at 13 just a
month ago. Let me give you some advice that I found helpful:

The goal of passing the test is different than the goal of complete
mastery. Don't confuse the two by putting off trying the test until
you think you have 13 wpm down solid. At one time people were required
to show a solid minute of copy to pass, but the change to 70% on the
questions (particularly if the VEC offers multiple-choice answers) has
really changed the skill required. If you can copy 4 or 5 letters in a
row at 13 wpm, them miss a couple, and then catch the next 4 or 5, and
so on for the whole 5 minute exam, you will almost certainly be able
to figure out most of the missed material and manage to pass a
multiple-choice exam. After all, any real language has a lot of
redundancy, and we use our knowledge of the redundant features of
languages to communicate all the time. As a practical instance of
this, note that there are usually two questions on call signs in the
exam, but you get two chances to catch them during the test.

The only special skill needed to do what I suggest above is the
ability to _ignore_ missed letters rather than worrying them over in
your head. If you are like me, you will be strongly tempted to
hesitate when you miss a letter and try to work it out before listening
to the next letter. This is a bad habit that can be conquered by
practicing the proper method of missing letters. As others have said,
copy code at a higher speed than you are comfortable with, and make
the effort when you miss a character to just let it go, and pick up
immediately on the next letter you hear. After only a couple of
practice sessions at this one skill, I went in and passed the 13 wpm
exam in spite of being _sure_ I wasn't really ready yet! The other
advantage to this technique is that it helps you objectively measure
just which letters are your "problem" letters. A drill that I used to
help conquer y, q, z, and x was to listen to very rapid code while
specifically attempting to identify my problem letters (rather than
copying any of the easy letters). After a while, these letters became
as familiar as old friends.

And, above all else, have fun doing code. Don't treat it as a chore
but as a game.

Good luck!

2217. Need Rural Phone Help

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-19 07:04:52 UTC
From: dpirl@crl.com
Message-ID: <3i6qik$63h@crl11.crl.com>
Source record: 251878

This is my first message to this newsgroup. I'm not a ham, but am posting this message in an attempt to help my brother who is living in the mountains of southern Mexico and attempting to get telephone service via a long range version of a cordless phone advertised to work over a 60 mile range.

My brother and his family live 15 miles from the base station transmitter, and their dwelling happens to lie in the shadow of a hill 1.5 km away. The phone will work if they drive to the top of the hill and set up the antenna there, but since my brother's wife is pregnant, and they have another small child, they really need to have the phone in their residence.

The vendor, Megatronics International, has explained that a directional antenna could solve their problem. They offered to sell them their rugged terrain system which is $10,000 and includes repeaters and remote power supplies, but they are missionaries, and this is way beyond their budget. The system they purchased cost about $2000.

I wonder if there is anyone here who is able to give technical advice so that my brother, Ed, could get a local technician to build him an antenna. (He is unable to find anyone locally who is able to solve the problem.) Ed tells me that the frequencies are 71-74 MHz to send and 45-47 MHz to receive. He says that he has a 100 watt power booster at the base station and a 12 volt, 50 watt booster at the remote unit.

Some one passed on some information to my brother that any low-band VHF antenna, like one from Radio Shack would do the job. Is this true? Are the frequencies I've listed above VHF? Would Ed need an antenna at both the base station _and_ the remote, or only at the remote station? Would this type of antenna enable him to receive signals at his residence in the shadow of the hill?

Much thanks for any assistance.

Lewis Gregory (lgregory@cris.com) wrote:

: 1. I'm currently studying for my 1B 13wpm code test, and seem to be "hitting
: the wall" at about 8-9 wpm. Do any of you CW gods out there have any
: strategies that you found effective for increasing code speed? (Besides
: copying till your ears bleed, which I'm already doing.) :)

That's not an unusual speed for "the wall". Copying code is quite
different from one side of the wall to the other. Up to about ten
wpm, you can copy just fine by consciously *translating* what you hear
into the corresponding letter. Above that speed, you really have to
eliminate the translation step. The sound *is* the letter. It's
similar to the difference between "hunt-and-peck" and touch-typing.

I got past the "wall" just by operating a lot, and mostly CW. It was
my mode of choice (and the FCC's back then!) so I wasn't approaching
it the way many people do today and it was fun. One day, the wall was
just gone. I seem to remember it the same way I remember finally
learning to ride a bike...all of a sudden, the balance was just
there, and then it seemed so easy.

Bottom line: Operate CW a lot, don't just listen to tapes or computer
programs (that's work). Listen to faster code than you can copy and
pick out what you can. Don't work at it too hard, just let it flow
and relax.

I know that's pretty fuzzy advice...but if I could give you a better
answer than that, I'd be rich!

Good luck!
Greg WB0RTK

I'm working on getting to 20, after passing the exam at 13 just a
month ago. Let me give you some advice that I found helpful:

The goal of passing the test is different than the goal of complete
mastery. Don't confuse the two by putting off trying the test until

you think you have 13 wpm down solid. At one time people were required to show a solid minute of copy to pass, but the change to 70% on the questions (particularly if the VEC offers multiple-choice answers) has really changed the skill required. If you can copy 4 or 5 letters in a row at 13 wpm, them miss a couple, and then catch the next 4 or 5, and so on for the whole 5 minute exam, you will almost certainly be able to figure out most of the missed material and manage to pass a multiple-choice exam. After all, any real language has a lot of redundancy, and we use our knowledge of the redundant features of languages to communicate all the time. As a practical instance of this, note that there are usually two questions on call signs in the exam, but you get two chances to catch them during the test.

The only special skill needed to do what I suggest above is the ability to _ignore_ missed letters rather than worrying them over in your head. If you are like me, you will be strongly tempted to hesitate when you miss a letter and try to work it out before listening to the next letter. This is a bad habit that can be conquered by practicing the proper method of missing letters. As others have said, copy code at a higher speed than you are comfortable with, and make the effort when you miss a character to just let it go, and pick up immediately on the next letter you hear. After only a couple of practice sessions at this one skill, I went in and passed the 13 wpm exam in spite of being _sure_ I wasn't really ready yet! The other advantage to this technique is that it helps you objectively measure just which letters are your "problem" letters. A drill that I used to help conquer y, q, z, and x was to listen to very rapid code while specifically attempting to identify my problem letters (rather than copying any of the easy letters). After a while, these letters became as familiar as old friends.

And, above all else, have fun doing code. Don't treat it as a chore but as a game.

Good luck!

From: dpirl@crl.com (Donald Pirl)
Subject: Need Rural Phone Help

This is my first message to this newsgroup. I'm not a ham, but am posting this message in an attempt to help my brother who is living in the mountains of southern Mexico and attempting to get telephone service via a long range version of a cordless phone advertised to work over a 60 mile range.

My brother and his family live 15 miles from the base station transmitter, and their dwelling happens to lie in the shadow of a hill 1.5 km away. The phone will work if they drive to the top of the hill and set up the antenna there, but since my brother's wife is pregnant, and they have another small child, they really need to have the phone in their residence.

The vendor, Megatronics International, has explained that a directional antenna could solve their problem. They offered to sell them their rugged terrain system which is $10,000 and includes repeaters and remote power supplies, but they are missionaries, and this is way beyond their budget. The system they purchased cost about $2000.

I wonder if there is anyone here who is able to give technical advice so that my brother, Ed, could get a local technician to build him an antenna. (He is unable to find anyone locally who is able to solve the problem.) Ed tells me that the frequencies are 71-74 MHz to send and 45-47 MHz to receive. He says that he has a 100 watt power booster at the base station and a 12 volt, 50 watt booster at the remote unit.

Some one passed on some information to my brother that any low-band VHF antenna, like one from Radio Shack would do the job. Is this true? Are the frequencies I've listed above VHF? Would Ed need an antenna at both the base station _and_ the remote, or only at the remote station? Would this type of antenna enable him to receive signals at his residence in the shadow of the hill?

Much thanks for any assistance.

davev@atkc.COM (Dave van De Kerk) writes:

>The first message was yet another personal attack against Jeff Angus,
>jangus@skyld.grendel.com. The second message detailed that half of the
>Elmer's list no longer wants to be active.

Hi Dave,
If Jeff Angus would limit his personal attacks then there would be
no reason for anyone to attack back. His one-line insults continually
plague the various radio groups.

>You have seen Jeff's angry postings against certain parties who constantly
>bait with attacks on the no code techs. While I find Jeff's momentary
>lapse into obscene language as unacceptable as anybody else, I know something
>about Mr. Angus that you don't. You see, Jeff is *MY* Elmer. Jeff is the one
>who answered my 10:00 at night questions about antenna grounds. He gave
>me my power supply. Etc. Etc. Etc.

A common occurrence: Someone can be very nice and very helpful in person
but when they get behind the anonymity of a mic or keyboard they can
get real nasty. It's easy to do (speaking from experience).

>The number of Elmers is dropping. That is because some are being shot
>down by the flames of people who don't care enough to help, only to
>attack.

What other Elmers are `being shot down' by flames? Maybe they're just
tired of 10pm phone calls. ;)

Maybe we should petition the FCC to *raise* the code speed for
HF access. I'm still puzzled as to what or who Generation X is
supposed to be.

Completely unrelated, I've read that the first Boeing 777 in
commercial operation will have the callsign WA002. It appears as
if the FCC has run out of N callsigns for aircraft.

2229. Give No-Code some Credit

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-19 20:26:39 UTC
From: jaa2188@tntech.edu
Message-ID: <1995Feb19.142639.8590@atlas.tntech.edu>
Source record: 251867

I am currently a No-Code Tech. Got my license in December. At the time I got
my license, my only purpose was to chat with the HAMs that go to school with
me. I had a CB, but the only thing I heard was some hooker trying to sell
herself. I am not a prud or anything, but I have better things to listen to.
Now I can talk to my classmates about anything from my latest Computer Project
to thier latest Digital Comm project on our on campus repeater.
Now there is a purpose for this message. I had no intention of taking
my code test, but now that I have my No-Code Tech and have been playing with my
radio and listing to all the fun stuff that goes on in the other bands, I am
going to start studying my code. Thanxs to the No-Code, I have enough interest
to start studing and try to obtain a higher classification.
Let us give NO-code some credit.

2230. Jeff Angus and Hitler quotes in rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-19 22:41:33 UTC
From: andyneal@ocf.berkeley.edu
Message-ID: <andyneal-1902951441330001@sharkbite.hip.berkeley.edu>
Source record: 251868

Foreword: Although this post has nothing to do with radio, I feel it does deserve (and needs) to be posted in this group. I apologize to the net at-large for this fact in advance. Most importantly, THIS IS NOT A FLAME.

In article <9502181650.AA01168@venus.atkc.com>, davev@atkc.COM (Dave van De Kerk) wrote:

> I felt I had to speak...[about] another personal attack against Jeff Angus,
> jangus@skyld.grendel.com.

> Jeff really cares about...helping other people,
> and I am sick of seeing the attacks against him.
>
> I challenge all of you who have been flaming Jeff Angus
> to...Put up or shut up, please.

[much deleted]

I do not know Jeff Angus personally. However, in the signature of his posts, he writes:

>"1935 will go down in history. For the first time, a civilized nation has
>full gun registration. Our streets will be safer, our police more efficient,
>and the world will follow our lead into the future." - Adolf Hitler

Writing to Mr. Angus about this quote, his reply was:

"Have you been watching what people like Diane Feinstein, Janet Reno or Bill Clinton have been doing to our basic rights?"

I am a Jew, Mr. Angus. Over 30 of my immediate family members were slaughtered like animals for no reason other than "ethnic cleansing" by soldiers following orders from Adolf Hitler.

I think any reasonable, educated, mentally-stable American knows for a fact that none of the politicians he mentioned have committed qrotesque atrocities against more than SIX MILLION HUMAN BEINGS, as did Adolf Hitler.

The fact that Mr. Angus is quoting Adolf Hitler in the context that Hitler was some kind of saviour of civil rights is, at best completely misleading and untrue, and at worst no less than pure, unadulterated evil. Holocaust revisionism is the true "filth," and I find this quote FAR more offensive than any four-letter words Mr. Angus may have written.

Mr. Angus, I am making a public, personal plea to you because my news reader is unable to filter messages or threads containing this quote: please remove this quote from your .sig. If you truly care about helping

people, as Dave van DeKerk says, you won't force me to be reminded of this intense, personal family tragedy every time I want to read about Amateur Radio. I feel such quotes have no place here, and I'm sure many silent lurkers agree.

I don't deny your (or anyone's) right (in the U.S.) to bear arms. I am sure the NRA would be happy to provide you with other historical quotes about the right to bear arms, if you absolutely must have one.

In Germany today, it is a crime to quote Hitler as you have; however I strongly support the right to free speech, print, etc., which is why I am asking Mr. Angus to voluntarily remove/replace this quote, out of compassion for my situation and not because I am any kind of Thought Police, etc.

And finally, Mr. Angus, if you would like to see the direct result of Hitler's public "civil rights" policy, viz. the holocaust (and the reason for my grief), you can download a picture of my family, all of whom were killed in concentration camps Auschwitz and Birkenau, at: http://ocf.berkeley.edu/~andyneal/FamilyLrg.JPG

Sincerely,
Andrew Brandt

If the above statement is true, then I declare a cease fire. See who
launches a personal attach in rec.radio.* first. BTW, posted comments
on historical quotes in .signature files certainly qualify as personal
attacks. If you don't like the politics indicated by a .signature,
take it off line to direct e-mail please.

> Someone can be very nice and very helpful in person
> but when they get behind the anonymity of a mic or keyboard they can
> get real nasty. It's easy to do (speaking from experience).

I hope the above comment indicates that Mr. Herman has the wisdom
to realize that the flame war salvos have not been coming from
one direction only.

In my original posting, I challenged those parties firing the flames
to join the Elmer's list instead. Mr. Herman made no note of that
in his posted reply. May I renew my challenge for the combatents to
spend the time they have been using for bickering in doing something
constructive for amateur radio. If they feel that the level of
amateur radio knowledge required to help people via the Elmer's list
is beyond their knowledge and abilities, then I challenge them to
help in any way they are qualified for. Even a no code tech, with
their license still wet, can help by

* participating in training groups for new licensees
* particiapting in organized groups for coaching new
amateurs. (i.e. the earthquake emergency net group
I mentioned in my first posting.)
* always set a high example of operating practice
* encourage all license classes to learn more and
participate in amateur radio to the fullness of
their own abilities.

> What other Elmers are `being shot down' by flames? Maybe they're just
> tired of 10pm phone calls. ;)

Jeff never complained once about any of my questions, at any time.

Hi again, Dave: Please tell me if this is a personal attack:

``The above quote is from a different time, in a different context,
with different people on the streets than today.''

I think someone is a bit too sensitive if they honestly feel
that was a `personal attack'.

73 from beautiful Hawaii,

: It's obvious from your enlightened reply, that you "don't need no" grammar
: in order to communicate. Thats OK, cavemen got along just fine for a million
: or so years in this way.

: Your attitude is the reason why some of us "old-timers" have a certain distaste
: for the idea of the no-code license. Thats OK, also, as I will just hang out on
: my favorite CW band, tighten my filter up a bit, and "dittyditty" my few
: remaining years away.

: By the way, I'm only in my 30's, and I plan to "ditty ditty" for a long time to
: come.

: Ten Four, Good Buddy. Enjoy 2 meters!
This CB'er turned no-code tech, and others like him are the reason I want to
upgrade to General as soon as I can. I have seen what happened to CB
over the years. We must never let this happen to our precious bands.

It's obvious that he doesn't understand the CW attraction and the reason
for it's use after all these years.

I can imagine a real thrill when someone answers my first CQ from afar.

It is true though that the tests could be a bit tougher. I aced the
Novice and Tech and almost passed the General without looking at the
question pool (for General)

I took a Scuba course a while back. Now that written test was tough with
all the gas laws, consumption rates, etc.

I don't think we want truck stop hookers taking reservations on the ham
bands.

This is just my .02 cents worth.

Jeff,

but none of the reasons you mention are right.
And if you see how much was spent in the last years
on airport and flight controll installations, you should
not think that FM radios were too expensive.

See WY7O's posting.

>strategies that you found effective for increasing code speed? (Besides
>copying till your ears bleed, which I'm already doing.) :)

One thing that helps me, and this is pretty much with any study material, not just code speed, is to put it aside for a day or two every once in a while. Over a weekend works great. Somehow, this allows you to "digest" what you've learned and move on. Other than that, get in about half an hour of practice a day, and keep pushing yourself hard. If you can copy 75-80% at a certain speed, you should be practicing faster.

I'm currently working on passing the 20 WPM, but I do remember being where you are.

MDS>Recent 160 meter conditions top the news this week. K7SS reports
MDS>that on January 29 during the CQ WW 160 meter contest, W7XR worked
MDS>OH7MS on long path at 1428z. This was 80 minutes before local
MDS>sunrise at W7XR, and signals were strongest on a beverage antenna to
MDS>the west. K7SS thought that this was the first 160 meter long path
MDS>contact to Europe from North America, but it now appears that N6SS
MDS>beat this record by 20 minutes, when he worked OH7MS at 1408z. With
MDS>W7XR and K7SS in Washington State, and N6SS in Arizona, N6SS worked
MDS>OH7MS 6 minutes before local sunrise and W7XR worked him 80 minutes
MDS>before his local sunrise. Congratulations to all.

MDS>Comments to the author of this bulletin can be sent via packet to
MDS>KT7H N7DUO.WA.US or via internet to tadssc.com.

MDS>Solar flux last week was unchanged from the week prior. Conditions
MDS>were unstable on the 11th through the 14th, with many periods of K
MDS>indices at 5 or 6. The A index peaked at 33 on the 13th.

MDS>Solar flux should peak around 96 on the 19th, then head back to the
MDS>mid eighties region. Active geomagnetic conditions due to recurring

MDS>coronal holes are expected to begin again around February 26, and
MDS>gradually increase through mid-March.

MDS>Sunspot Numbers for February 9 through 15 were 24, 38, 23, 24, 26,
MDS>36 and 36, with a mean of 29.6. 10.7 cm flux was 83.7, 81.5, 81.1,
MDS>81.1, 85.7, 82.4 and 84.9, with a mean of 82.9.

MDS>The path projection for this week is from Hawaii and Anchorage,
MDS>Alaska to Macao.

MDS> From Anchorage, 80 meters looks good from 1045 to 1900z, and 40
MDS>meters from 0930 to 2030. 30 meters should be good around 1900 to
MDS>2000 and again from 2200 to 2300 and around 0800. Check 20 meters
MDS>from 2230 to 0230, and 17 meters from 2300 to 0300. 15 meters may
MDS>be open on some days from 2300 to 0230.

MDS> From Hawaii, 80 meters looks like a good bet from 1030 to 1730z, and
MDS>40 meters from 0900 to 1830. 30 meters looks good from 0800 to
MDS>1930, and 20 meters from 2230 to 2330 and 0400 to 1430. Strongest
MDS>20 meter signals should be between 0900 and 1300. 17 meters should
MDS>be open from 2230 to 0700, and 15 meters from 2300 to 0630. 10 and
MDS>12 meters look quite good over this path, with 10 meters open from
MDS>2330 to 0500, and 12 meters opening 30 minutes earlier and closing
MDS>about an hour later.
MDS>NNNN
MDS>/EX

DAVE VAN DE KERK intones:

DVDK>I normally don't post, but having just seen these two messages
DVDK>following one another, I felt I had to speak.

DVDK>The first message was yet another personal attack against Jeff Angus,

Yet another attack? HE is the one who always provokes this stuff
Dave. You obviously learned well from Jeff! Get a life!

DVDK>You have seen Jeff's angry postings against certain parties who constantly
DVDK>bait with attacks on the no code techs.

Actually no, we have seen Jeff attack ANYONE who he converses with!

While I find Jeff's momentary
DVDK>lapse into obscene language as unacceptable as anybody else, I know someth
DVDK>about Mr. Angus that you don't. You see, Jeff is *MY* Elmer.

So does that somehow give him the right to be rude and use filthy
language whenever he wants to get attention?

Jeff is the
DVDK>who answered my 10:00 at night questions about antenna grounds. He gave
DVDK>me my power supply. Etc. Etc. Etc.

Commendable. I hope that you didn't pick up the heavy weight of his bad
habits along with that power supply though!

DVDK>Jeff really cares about amateur radio and helping other people,
DVDK>and I am sick of seeing the attacks against him.

I hope you feel better soon.

DVDK>If you want high standards to be maintained, if you want amateur
DVDK>radio to be changed, please do so by EXAMPLE.

Now you start to lecture everyone on how to maintain standards that
you and Jeff appear to know nothing about.

DVDK>I challenge all of you who have been flaming Jeff Angus to join
DVDK>the Elmer's list. Put up or shut up, please.

"Put up or shut up" - Is that your "EXAMPLE" of how to be polite and
not flame others? Feh!

As for me, I will
DVDK>merely quietly teach a class through my religious denomination on
DVDK>how to pass the no code tech license for members who want to start
DVDK>an earthquake emergency net.

DVDK> KE6GXD

Seriously though Dave, I applaud what you are trying to do, and
I expect that there is a better side to Jeff A. when his blood
pressure is not pumped up on Adrenaline here.

I don't read his messages any more.

All the best - BC

DO>Jeff Angus is a fine man. All of you who flamed him eat poop.

Maybe we were all mistaken, but we were going by the impression HE
created by his own behavior. The fact that several folks did not
appreciate his nastiness and choice of French, indicates that
his behavior is not acceptable in polite company.

If he is such a fine man, maybe you can persuade him to DEMONSTRATE
this by behaving like a fine man?!

DO>All of you who flamed him eat poop.

I guess you are showing us what a "fine man" you are too!
By the way, my dad can beat up your dad and Jeff's dad,
so there! Nya-nya-nya-nya-nya-nya!

2248. AGC audio preamp

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-20 12:32:21 UTC
From: slg@rfc.COMm.harris.COM
Message-ID: <Pine.A32.3.90.950220072418.146936A-100000@fep01.rfc.comm.harris.com>
Source record: 251888

I built the AGC audio preamp circuit described on page 58 of the 2/95 QST. Has anyone else gotten this circuit to work yet?

I built it using the PCB from FAR Circuits. The circuit BADLY distorts the audio. By checking the circuit with a scope, I determined that the audio signal is clean on pin 3 of the 741 op amp, but that the signal is distorted on pins 6 and 2. The distorted signal has a "shark fin" look to it--the waveform comes up from 0 volts like a normal sine wave, but then drops off suddenly. The signal is NOT clipping off the top of the wave.

If anyone else has experienced this problem, or can suggest a solution, I'd appreciate it!

TNX in advance, Steve KB2PWM

2249. Help With Motorola DLP

A friend was reporgramming my Motorola P200 (As an authorized tech of course)
As we were moving frequencies around we can accross a DLP ???. When I got
home to check and see if the other radio worked it didn't. Then I looked
at the freq. printout from the computer and it said the DPL was set
to none.

My question: Is there a way to find the missing DPL without getting a
cord for the P100 (Still Working on DLP). And what does ??? mean in
the DPL world?

Thanks
-Stu

Actually, ver 1.6 has been available for a few months. I
bought it from PacComm in Florida. Works great. And,
I had lockups with 1.4 that didnt happen with 1.5. So,
maybe we have RF getting into the PC, which frequently
locksup Baycoms when the antenna is near the computer.

Just wanted to let everyone know about a flyer I picked up...

Its for Amatuer radio classes in the Marlboro, MA area.

Saturday Mornings from 9AM to Noon starting Feb 25 through May 13 1995.

At the Marlboro Boys and girls club (169 pleasant street, Marlboro, MA)

Free class - Novice, Technician, and 5wpm code.

Call Ned Fenstermatcher W1HGU (508)485-4472 or
Pam Chilton KA1ZLO (508)481-0038

(Contact before 10PM PLEASE)

If you miss this class, call and ask when another one is anyway..

Sweep tube or "real" radio power tube, you should neutralize any power amp
that has to cover a five octave frequency range. Finals in the 830 (and
530) are 6146B, and I recommend that you buy a matched pair if possible.

: By the way, I'm only in my 30's, and I plan to "ditty ditty" for a long
time to
: come.

: Ten Four, Good Buddy. Enjoy 2 meters!

"For those who understand, no explanation is needed...for those who don't,
no explanation is possible."
CW is not only a tradition, but a very reliable form of communications
that all radio amateurs should have the ability to use properly, and most
importantly, be required to learn. Even for those who don't use the code,
there still needs to be a "filter" to seperate the sludge of the radio
operators from the truly dedicated and proper ones.
Right now, I'm just waiting until the 26th of Feb. so I can go pass my
General and Advanced test and get out of the highly improper and populated
"world above 50mhz." I've got a Tech + license, but right now 10m is dead
and I'm looking for some better contacts on HF. I'm also just sick and
tired of the "no-codes" complaining about their wants for "codeless" HF
access, or their patronizing of 2m operators that are Extra and Advanced
classes. 73's! Long Live CW

Not to add more fuel to the fire (da-dump-dump)...

Chrysler recomends only fusing the positive lead when installing radio
equipment into one of their cars/trucks. Their reasoning is that if
the negative fuse blows the radio will stay on using another path to
ground (antenna cable most likely) which was not designed to handle
the current possibly creating a fire. They did say to fuse the
positive lead AT the battery.

This makes sence to me but so does fusing both leads....
If it is unsafe why would the manufacturer recomend it?

The Hartford (CT) Test Center of National Radio Examiners
is in the process of setting up exam schedules for the
winter/spring season. Commercial radio operator testing
will be conducted as often as interest warrants.
Testing is available for the various commercial radio
operator licenses and endorsements such as the
General Radiotelephone Operator License (GROL),
Radiotelegraph Operators licenses, GMDSS Radio
Operator and Radio Maintainer, and the Ship Radar
Endorsement. Those interested in taking commercial
exams in the Hartford area can contact me via email
at halprinr@ccsu.ctstateu.edu or leave your
name and phone number on the test center voice mail
at 203-722-2358 for further details. Thanks/73.

Congrats on passing the test, and welcome to the hobby! The no-code
license is rejuvinating the hobby by bringing in lots of new blood and fb
ops. Many are upgrading.

In my opinion, the best way to go about learning the code is as follows:

1) get practice tapes which will get you up to maybe 7 WPM or so.
2) Get the 5 WPM certification so that you can work CW on the air.
3) Take the plunge, buy a rig, get on the air. In about 3 weeks, at one
qso per evening, you will be at 13 WPM with no problem. You are
then ready to take your general. After that, you
can increase to 20 WPM, if that interests you, with little trouble.

On the air QSOs are a HUNDRED times easier, as a means of learning CW,
than code tapes. And a heckuva lot more fun than code tapes! you might
even catch some DX on the 40 meter novice cw band.

The alternatives to the above are to either buy code tapes which will take
you all the way to 13 WPM, or go to classes. Some radio clubs hold classes
for free. I would DEFINITELY not pay for cw classes. CW is one thing that
you have to learn on your own. (Or with other ops via on the air
conversations (qsos).

Good luck!

From: jimn2ete@aol.com
Message-ID: <3ibjj5$rqh@newsbf02.news.aol.com>
Source record: 251917

One of the intentions of the no-code license was to show people that there is much more to ham radio than 2 meter FM and repeaters. Some of the old time hams have good reason to beef about the no code license.
The whole concept of ham radio was devised under morse code. Yes, it is very
antiquated with all the high speed digital communications around us. Yes, the
celluar phone is much more convienient. BUT!! in an emergency situation, when all of the high technology is rendered inoperable or destroyed, either by enemy forces or by nature itself. That
$1000 computer and that $1,000,000+ satellite is nothing compared to a straight
key and an HF rig and running good old CW to get the message across. I hope that you do indeed go to learn CW and I wish you lots of luck!!

A few years ago the ARRL Repeater Directory was printed using the information sent in by each repeater trustee. I don't know why they changed (I can imagine though), but they now publish the directory using information sent to them by the state/local
coordinating agency. Here in Northern California, the repeater information database is kept by each frequency/repeater coordinator. If you want your repeater listed in the ARRL directory, then you better keep your local coordinator updated.

Some repeater owners list their repeaters by mountain/hill top, and others list their repeaters by area covered. Our local coordinating agency has a place on the
coordination sheet for the owner to put the way he wants his repeater listed. He
has the choice of either exact location, or area covered. Some repeater owners, for security reasons, do not want the exact location of their repeaters listed. There
has been instances here of ham repeaters being surgically removed (stolen) from commercial repeater vaults.

My open UHF repeater on 441.350 is listed in the ARRL directory as a "Merced" repeater. It covers Merced and the surrounding areas quite nicely. I also happen to live and work in the Merced area. If I listed it as a Mt. Bullion repeater, then those who were looking through the repeater directory for a repeater that covered the Merced area would have no idea what the repeater coverage area would be. I think it is best that they are listed by area

covered, rather than the mountain top that they are located on.

By the way, the repeater coordinating agency for Northern California, NARCC, sells their own repeater directory. If you want to publish a repeater directory on CD ROM, you can contact them to purchase their directory. It is the most up to date listing of Northern California repeaters available.

Your message is a little confusing.

First off, if your friend was an "authorized tech" for Motorola, he would certainly know what DPL is and how it works.

You mention DPL and DLP in your message several times. I assume that you are talking about DPL. DPL stands for Digital Private Line. It works the same way as PL or CTCSS (continuous tone coded squelch system) works. However, instead, the radios involved either send or receive a subaudible digital data stream instead of an analog subaudible tone as in PL or Private Line or CTCSS.

The above is assuming that you know about PL/CTCSS.

2276. Re: AM vs. FM -> Aircraft?

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-21 05:40:58 UTC
From: joel@PROBLEM_WITH_INEWS_DOMAIN_FILE
Message-ID: <3ibuda$oki@anshar.shadow.net>
Source record: 251924

I would just like to add this comment to my earlier statement regarding this question: for voice xmission, FM requires roughly 2.5 times the bandwidth of a comperable AM signal. It might not seem that way, but an FM voice xmission deviating plus or minus 5 khz, ideally needs a channel spacing of 25khz whereas for AM voice, a 10khz spacing works finely.

>I hadn't thought of the point that a no-code tech could obtain a 1x2 call if
>they had a relative that "owned' the call previously. I agree, once again
>the ARRL had lobbied to protect the interests of those in Newington by
>stating that they represent those thousands of subscribers to QST.

Unfortunately the previous articles aren't available on this
server....

The March QST implies that license holders *must* have a high enough
license class to get the desired call sign.

"...the FCC is implementing a new system that is expected to be
subject to the license class limitations of the current call sign
assignment groups and policy.." Mar 95 QST, p 98.

Subsequent examples do not include the possiblity of anyone other than
a Amateur Extra license holder getting a 1x2 call, even if a ham was
applying for a deceased relative's call. A club may, with permission,
get a deceased member's call regardless of group, otherwise they will
get a 2x3 call.

It seems the ARRL was asking for the groups to continue to indicate
class of license holder. However, the word "expected" is scattered
all through the article, and the FCC could do otherwise. Somehow I
don't see the FCC giving a flying **** whether a General gets a 1x2
call.

Of course, something else may have come up since QST went to press.

2278. End this HTX-404!

Newsgroup: rec.radio.amateur.misc
Date: 1995-02-21 07:04:05 UTC
From: ad283@rgfn.epcc.edu
Message-ID: <1995Feb21.070405.20396@rgfn.epcc.edu>
Source record: 251927

I'm the one who originaly asked the question "What's Wrong With The HTX-404?"
and I think it's time to end it. I asked one simple question, it was answered
that same day. All it ended up doing was starting a large fight.

And for those of you who originaly read/answered my question, I found out that
the 70cm band has about 11 repeaters here (more than 2m) so it turned out to
be a good choice. There are even some linked to the 2m band so it has turned
out alright.

So why doesn't everyone just chill out and go back to being friends, the way
Hams are SUPPOSED to be.

Hi Davide!
I'm sorry, but there is no way to get a reciprocal license in Saudi Arabia at the moment. Your only hope is to get in touch with the club station HZ1AB in Dhahran. They have special licensing conditions and they sometimes allow guest operators to use the station. But I guess HZ1AB may be too far away from where you are located.

Date: 20 Feb 95 12:32:21 GMT
From: slg@rfc.COMm.harris.COM (Steven L Goldstein)
Subject: AGC audio preamp

I built the AGC audio preamp circuit described on page 58 of the 2/95
QST. Has anyone else gotten this circuit to work yet?

I built it using the PCB from FAR Circuits. The circuit BADLY distorts
the audio. By checking the circuit with a scope, I determined that the
audio signal is clean on pin 3 of the 741 op amp, but that the signal is
distorted on pins 6 and 2. The distorted signal has a "shark fin" look to
it--the waveform comes up from 0 volts like a normal sine wave, but then
drops off suddenly. The signal is NOT clipping off the top of the wave.

If anyone else has experienced this problem, or can suggest a solution,
I'd appreciate it!

TNX in advance, Steve KB2PWM

DAVE VAN DE KERK intones:

DVDK>I normally don't post, but having just seen these two messages
DVDK>following one another, I felt I had to speak.

DVDK>The first message was yet another personal attack against Jeff Angus,

Yet another attack? HE is the one who always provokes this stuff
Dave. You obviously learned well from Jeff! Get a life!

DVDK>You have seen Jeff's angry postings against certain parties who constantly
DVDK>bait with attacks on the no code techs.

Actually no, we have seen Jeff attack ANYONE who he converses with!

While I find Jeff's momentary
DVDK>lapse into obscene language as unacceptable as anybody else, I know someth
DVDK>about Mr. Angus that you don't. You see, Jeff is *MY* Elmer.

So does that somehow give him the right to be rude and use filthy
language whenever he wants to get attention?

Jeff is the
DVDK>who answered my 10:00 at night questions about antenna grounds. He gave
DVDK>me my power supply. Etc. Etc. Etc.

Commendable. I hope that you didn't pick up the heavy weight of his bad
habits along with that power supply though!

DVDK>Jeff really cares about amateur radio and helping other people,
DVDK>and I am sick of seeing the attacks against him.

I hope you feel better soon.

DVDK>If you want high standards to be maintained, if you want amateur
DVDK>radio to be changed, please do so by EXAMPLE.

Now you start to lecture everyone on how to maintain standards that
you and Jeff appear to know nothing about.

DVDK>I challenge all of you who have been flaming Jeff Angus to join
DVDK>the Elmer's list. Put up or shut up, please.

"Put up or shut up" - Is that your "EXAMPLE" of how to be polite and
not flame others? Feh!

As for me, I will
DVDK>merely quietly teach a class through my religious denomination on

DVDK>how to pass the no code tech license for members who want to start
DVDK>an earthquake emergency net.

DVDK> KE6GXD

Seriously though Dave, I applaud what you are trying to do, and
I expect that there is a better side to Jeff A. when his blood
pressure is not pumped up on Adrenaline here.

I don't read his messages any more.

All the best - BC

RGR... will post the SHORTEST one becaue I am ont sure I have access to rec.radio.amateur.digital.misc. I pray that the moderator of this group will not mind! I have not seen anything to indicate rules against posting BASIC source code. You must run this program under QBASIC which comes with MS-DOS 5.0 and later versions. I think that the UUENCODED .EXE file would be MUCH much long to post...

Subject: Hams & cops

An aquaintence of mine has a Toyota Supra Turbo with his antennas mounted on his spoiler. The car is black and he typically wears an Air Force flight jacket and aviator sunglasses. He has made the same observation. Cops don't pull him over because they see all the "high-tech" antennas and a guy who looks like a government employee. Maybe the cops don't want the headache of pulling over a "Fed" so they abort.

The down side: Other drivers always impede him in traffic because they think he's a cop and they all slow down to 5 under the speed limit.
